

#### **Environmental Sustainability Vision 2050**

#### **Environmental Declaration**

Protect the air, land, and water with our hearts and technologies to sustain a better future for all.

#### **Environmental** Sustainability Vision 2 0 5 0

To solve various factors that lead to environment issues, the Mitsubishi Electric Group shall unite the wishes of each and every person, and strive to create new value for a sustainable future.

#### **Three Environmental Action Guidelines**

Apply diverse technologies in wide-ranging business areas to solve environmental issues

Challenge to develop business innovations for future generations

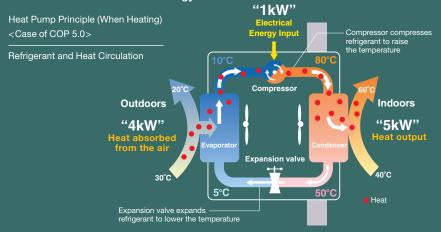

Publicize and share new values and lifestyles

#### **Key Initiatives**

- Climate Change Measures Resource Circulation
- Live in Harmony with
- Long-term Activities Innovation

- Understanding Needs Co-create and
- Disseminate New Values
- Live in Harmony with the Region

Heat pump technology inspires Mitsubishi Electric to design air conditioners that harmonize comfort and ecology.

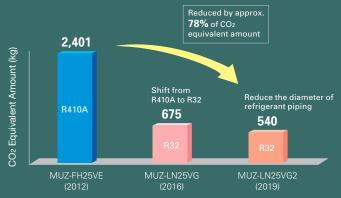

Mitsubishi Electric takes on the challenge of creating new value and contribute to a sustainable future in order to solve various environmental problems.

#### **Preventing Global Warming**

Mitsubishi Electric is actively introducing R32 refrigerant which has a global warming potential approximately 1/3 that of R410A refrigerant. Not only by shifting from R410A to R32 but by decreasing the diameter of refrigerant piping, we are also striving to reduce the amount of refrigerant usage. Throught these activities, we have achieved significant reduction in CO2 equivalent amount compared to conventional models and realised minimizing the negative impact to the environment more than ever.

#### Reducing the amount of refrigerant usage

\* reduction rate difers model by model.

#### Effective use of materials (Reduce & Recycle)

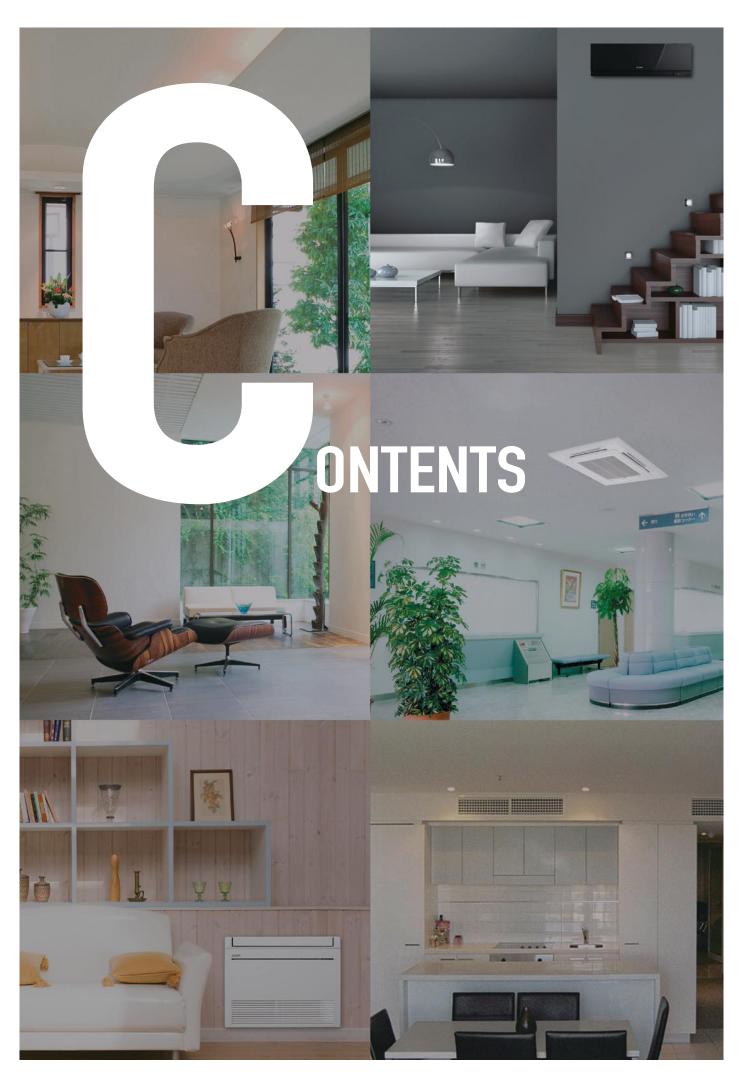

- 1. Accelerating the downsizing technology to reduce material use while balancing energy saving performance.
- 2. Designing products that are easy to separate and recycle.
- 3. All models are designed for WEEE and RoHS (II) compliance.\*

\*WEEE and RoHS directive: The Waste Electrical and Electronic Equipment (WEEE) Directive is a recycling directive for this type for equipment, while the Restrictions of Hazardous Substances (RoHS) Directive is an EU directive restricting the use of ten specified substances in electronic and electrical devices. In the EU, it is no longer possible (from July 2019) to sell products containing any of the ten substances.

#### **Balancing comfort and ecology**

Mitsubishi Electric develops technologies to balance comfort and ecology, achieving greater efficiency in heat pump operation.

|  | Comfort  | Ecology   |
|--|--|---|
| 1. Inverter  | Faster start-up and more stable indoor temperature than non-inverter units.  | Fewer On/Off operations than with non-inverter, saving energy.  |
| 2. 3D i-see Sensor                                     | Since the positions of people can be detected, airflow can be set to personal taste, such as in airflow path or protected from the wind. The ability to adjust to individual preferences realizes more comfortable air conditioning. | Since the number of people in a room can be detected, energy-saving operation is adjusted or the power is turned off automatically. Efficient air conditioning with less waste is realized. |
| 3. Flash Injection                                     | Achieves high heating capacity even at low temperatures, plus faster start-up compared to conventional inverters.  | Expands heat pump heating system to the cold regions to replace combustion heaters.   |
| 4. Dual Barrier<br>Coating<br>Dual Barrier<br>Material | Prevents the indoor unit from getting dirty, delivering you clean air.   | Keeping the inside of air<br>conditioner clean leads to<br>efficient operation and energy<br>saving.  |

#### **Air Conditioners**

10

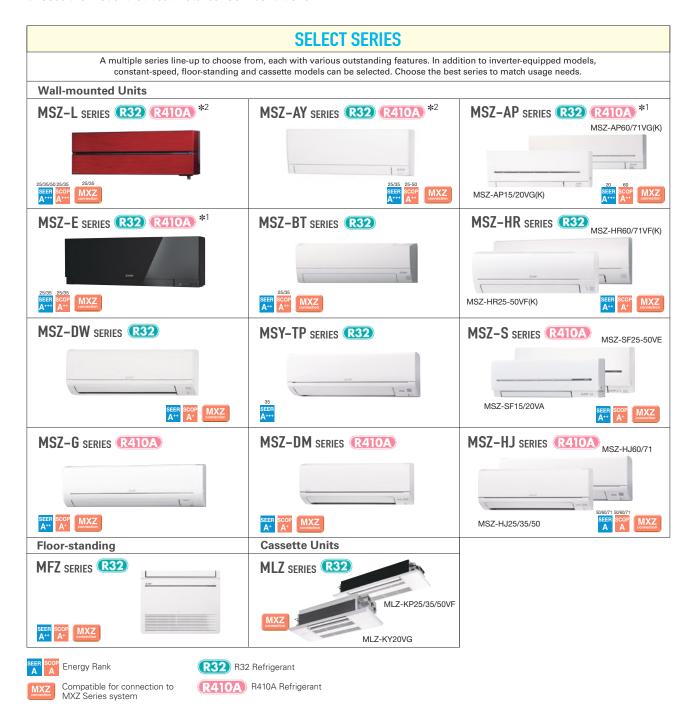

#### **SELECTION**

Choose the model that best matches room conditions.

\*1 R410A is for MXZ and PUMY connection. \*2 R410A is for PUMY connection.

#### **SELECT OUTDOOR UNIT**

Some outdoor units in the line-up have heaters for use in cold regions. Units with an "H" in the model name are equipped with heaters.

#### **Heater Installed**

MUZ-AY25/35/42/50VGH MUZ-EF25/35VGH MUZ-SF25/35/42/50VEH

MUZ-LN25/35VG

#### **Hyper Heating**

MUZ-RW25/35/50VGHZ MUZ-LN25/35/50VGHZ MUZ-FT25/35/50VGHZ MUZ-FH25/35/50VEHZ MUZ-FH25/35/50/60VGHZ

#### Selecting a Heater-equipped Model

In regions with the following conditions, there is a possibility that water resulting from condensation on the outdoor unit when operating in the heating mode will freeze and not drain from the base.

- 1) Cold outdoor temperatures (temperature does not rise above 0°C all day)
- Areas where dew forms easily (in the mountains, valleys(surrounded by mountains), near a forest, near unfrozen lakes, ponds, rivers or hot springs), or areas with snowfall.

To prevent water from freezing in the base, it is recommended that a unit with a built-in heater be purchased. Please ask your dealer representative about the best model for you.

### MSZ-L

Developed to complement modern interior room décor, the LN Series is available in four colours specially chosen to blend in naturally wherever installed. Not only the sophisticated design, but also the optimum energy efficiency and operational comfort add even more value to this

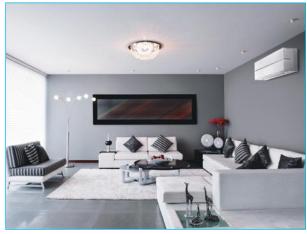

#### **Luminous and Luxurious Design**

Natural White, Pearl White, Ruby Red, and Onyx Black. LN Series indoor units are available in four colours to match various lifestyles. The appearance of the indoor unit differs depending on the lighting in the room, attracting the attention of everyone that enters the room.

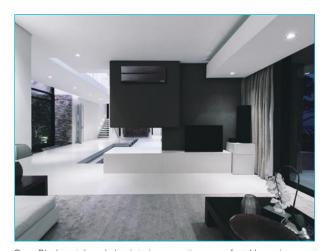

Master craftsmanship painting technology has resulted in a refined design, giving the finish deep colour and a premium quality feel.

Pearl White blends in with any interior.

Ruby Red gives an accent to the room, affording timeless elegance to sophisticated interiors.

Onyx Black matches darker interiors, creating a comfortable environment.

#### **LED Backlight Remote Controller**

Not only the indoor units, but the wireless remote controllers come in four colours as well. Each remote controller matches the indoor unit. Even the textures are the same.

The setting can be easily checked in the dark thanks to LED backlight.

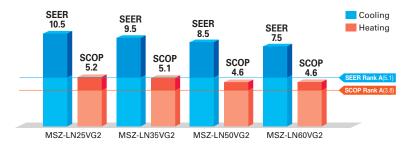

#### **High Energy Efficiency**

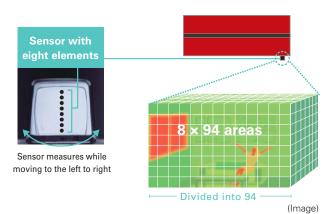

Optimum cooling/heating performance is another feature for the LN series. Models from capacities 25 to 50 have achieved the "Rank A<sup>+++</sup>" for SEER, and models for capacities 25 and 35 have achieved the "Rank A<sup>+++</sup>" for SCOP as well.

#### 3D i-see Sensor

The LN Series is equipped with 3D i-see Sensor, an infrared-ray sensor that measures the temperature at distant positions. While moving to the left and right, eight vertically arranged sensor elements analyze the room temperature in three dimensions. This detailed analysis makes it possible to judge where people are in the room, thus allowing creation of features such as "Indirect airflow," to avoid airflow hitting people directly, and "direct airflow" to deliver airflow to where people are.

#### **Indirect Airflow**

The indirect airflow setting can be used when the flow of air feels too strong or direct. For example, it can be used during cooling to avert airflow and prevent body temperature from becoming excessively cooled.

#### **Direct Airflow**

This setting can be used to directly target airflow at people such as for immediate comfort when coming indoors on a hot (cold) day

**Even Airflow** \*LN Series only Normal swing mode

The airflow is distributed equally throughout the room, even to spaces where there is no human movement.

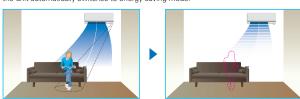

Even airflow mode

The 3D i-see sensor memorizes human movement and furniture positions, and efficiently distributes airflow

#### No occupancy energy-saving mode

The sensors detect whether there are people in the room. When no-one is in the room, the unit automatically switches to energy-saving mode.

The "3D i-see Sensor" detects people's absence and the power consumption is automatically reduced approximately 10% after 10 minutes and 20% after 60 minutes.

#### No occupany Auto-OFF mode \*LN Series only

The sensors detect whether or not there are people in the room. When there is no one in the room, the unit turns off automatically.

#### **Circulator Operation**

In case the indoor temperature reaches the setting temperature, the outdoor unit stops and the indoor unit starts FAN operation to circulate the indoor air.

The outdoor unit starts operation automatically when the indoor temperature drops below the setting temperature.

If the heating operation is continued, the warm air is formed around ceiling.

(MSZ-LN18/25/35/50/60VG-SC Scandinavian model)

This operating can help to circulate and rense warm air.

#### Plasma Quad Plus

Plasma Quad Plus is a plasma-based filter system that effectively removes six kinds of air pollutants. Plasma Quad Plus captures mold and allergens more effectively than Plasma Quad. It can also capture PM2.5 and particles smaller than 2.5µm, creating healthy living spaces for all.

#### Bacteria

Test results have confirmed that Plasma Quad Plus neutralizes 99% of bacteria in 162 minutes in a  $25 \mathrm{m}^3$  test space.

<Test No.> KRCES-Bio. Test Report No. 2016-0118

#### Viruses

Test results have confirmed that Plasma Quad Plus neutralizes 99% of virus particles in 72 minutes in a  $25\mathrm{m}^3$  test space.

<Test No.> vrc.center, SMC No. 28-002

#### Molds

Test results have confirmed that Plasma Quad Plus neutralizes 99% of mold in 135 minutes in a 25m<sup>3</sup> test space.

<Test No.> Japan Food Research Laboratories Test Report No. 16069353001-0201

#### **Allergens**

In a test, air containing cat fur and pollen was passed through the air cleaning device at the low airflow setting. Before and after measurements confirm that Plasma Quad Plus neutralizes 98% of cat fur and pollen.

<Test No.> ITEA Report No. T1606028

#### PM2.5

Test results have confirmed that Plasma Quad Plus removes 99% of PM2.5 in 145 minutes in a 28m<sup>3</sup> test space.

<In-company investigation>

#### Dust

Test results have confirmed that Plasma Quad Plus removes 99.7% of dust and mites.

<Test No.> ITEA Report No. T1606028

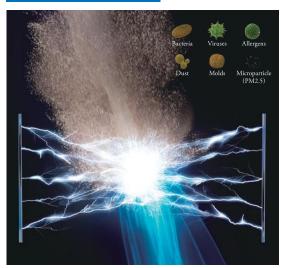

| Model     | Name             | Method           | Bacteria | Viruses | Molds | Allergens | Dust | PM2.5* |
|-----------|------------------|------------------|----------|---------|-------|-----------|------|--------|
| FH Series | Plasma Quad      | One-Stage Plasma | А        | А       | В     | В         | С    |        |
| LN Series | Plasma Quad Plus | Two-Stage Plasma | А        | А       | А     | А         | А    | А      |

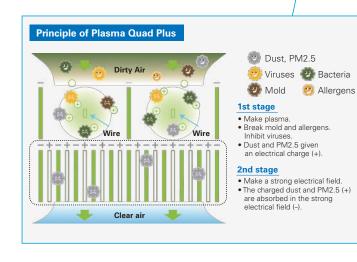

- A: Highly effective
- B: Effective
- C: Partially effective

\*PM2.5:

Particles smaller than 2.5µm

#### Image of Plasma Quad Plus

#### **Dual Barrier Coating**

A two-barrier coating prevents dust and greasy dirt from getting into the air conditioner.

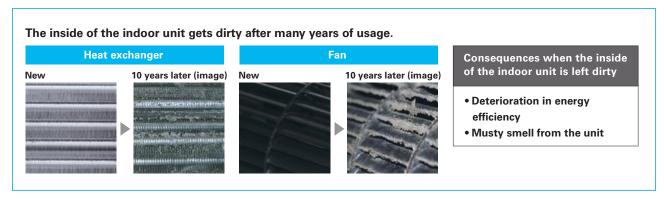

#### State-of-the-art coating technology

Dirt is generally classified into two groups: hydrophilic dirt such as fiber dust and sand dust, and hydrophobic dirt such as oil and cigarette smoke. Mitsubishi Electric's dual barrier coating works as a two-barrier coating that prevent hydrophilic dirt penetration and "hydrophilic particles" that prevent hydrophobic dirt from getting into the air conditioner. This dual coating on the inner surface keeps the air conditioner clean year-round.

Comparison of dirt on heat exchanger, fan and air duct (in-house comparison)

\*1 Verified by SIAA test method (JIS Z 2911) with No. JP0501014A0002O on SIAA antifungal agent positive list. Antifungal effect depends on the working environment. Fungicides comply with the SIAA safety criteria.

What is SIAA? https://www.kohkin.net/en\_index/en\_siaa.html

#### **Double Flap**

The vanes create various airflows to make each person in the room comfortable. Not only the horizontal vanes, but also the vertical vanes move independently, eliminating hot spots or cold spots throughout the room.

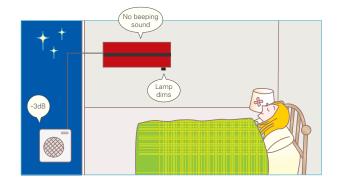

#### Night Mode

When Night Mode is activated using the wireless remote controller, air conditioner operation will switch to the following settings.

- The brightness of the operation indicator lamp will become dimmer.
- The beeping sound will be disabled.
- The outdoor operating noise will drop to 3dB lower than the rated operating noise specification.

#### 10°C Heating

During heating operation, the temperature can be set in 1°C increments down to 10°C.

This function can also be used with the Weekly Timer setting.

#### **Quiet Operation**

The indoor unit noise level is as low as 19dB for LN25/35 models, offering a peaceful inside environment.

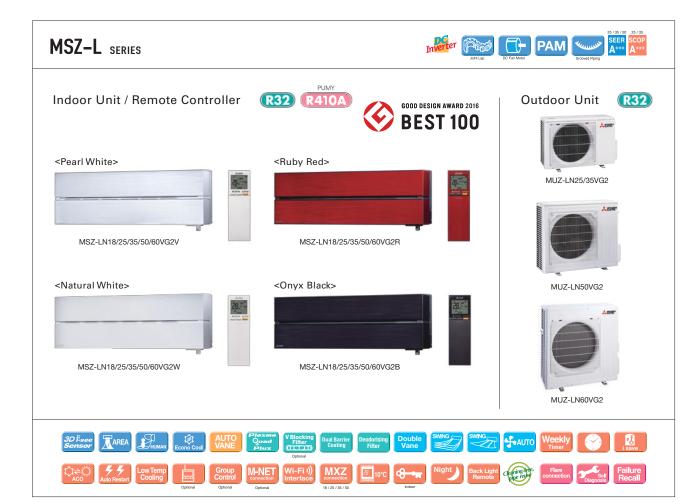

#### Built-in Wi-Fi Interface

The indoor unit is equipped with a Wi-Fi Interface inside an exclusive pocket in the unit.

This eliminates the need to install a Wi-Fi interface, and also contributes to the beautiful appearance since the interface is hidden.

<sup>\*</sup>The cooling/heating capacity may drop.

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or GRassemble the product yourself and always ask a professional.

The GWP of R32 is 675 in the IPCC 4th Assessment Report.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(\*3) SHI: Super High

(\*4) SEER, SCOP and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

(\*5) Please see page 57-59 for heating (warmer season) specifications.

### MSZ-AY SERIES

The AY series has an excellent cleanliness feature and ranges to two models: the VGK model comes standard with the V Blocking Filter, which has antiviral, antibacterial, anti-mold, and anti-allergen effects, and the VGKP model comes standard with Plasma Quad Plus, which can collect PM2.5 dust in addition to these effects. The AY series has also been upgraded in terms of quietness, energy efficiency, and ease of installation. Enjoy a comfortable air environment with the AY series.

#### High energy saving

The AY series have achieved either the "Rank  $A^{+++}$ " or "Rank  $A^{++}$ " for SEER and SCOP as energy-savings rating.

The high-efficiency air conditioner is eco-friendly and economical.

#### Matt and Sophisticated Design

#### **Rounded corners**

The rounded corners give a soft impression that blends in with any room.

#### Simple and Compact size

While the plasma is built-in, the angle of the curve is carefully designed to maintain the compact unit.

The elegant and sophisticated design has been created to fit in any room, with careful attention to detail in the surface finish and panel angles.

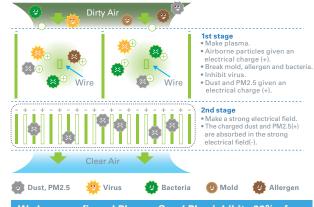

#### Plasma Quad Plus (only VGKP model)

You can enjoy the clean and safe air by Plasma Quad Plus.

Plasma Quad Plus is a plasma-based filtering system which contributes to a better air quality in your room. Plasma Quad Plus applies a voltage of approximately 6,000 volts to the electrode to generate plasma, effectively removing various kinds of airborne particles such as viruses, bacteria, mold, allergen, dust, and PM2.5.

#### We have confirmed Plasma Quad Plus inhibits 99% of adhered COVID-19.

- \*Tested Organization: National Hospital Organization Sendai Medical Center, Test Report No: R4-001 Test result: Neutralised 99% of influenza A virus in 210.5 minutes in a 25m³ test space
- \*Tested Organization: Japan Textile Products Quality and Technology Center, Test Report No: 20KB070569, Tested Materials: SARS-CoV-2, Test Method: Original (The test was conducted on the Plasma Quad device alone, not designed to evaluate product performance.) Test Result: Inhibited 99.8% in 360 minutes. The result without the effect of natural attenuation is 96.3%

#### V Blocking Filter (only VGK model)

"V Blocking Filter" with antiviral effect inhibits 99% of adhered virus, and other harmful substances, such as bacteria, mold and allergen. Two-layered filter with nonwoven fabric and electrostatic filter can effectively capture

and remove small particles from the air in your room.

\*Virus Test method: JIS L 1922, Tested Organization: Guangdong Detection Center of Microbiology, Test Report No: 2020FM30156R02D, Test result: 99% neutralized in 24

Microbiology, Test Report No: 20/2UFN/30166H0/2D, Test result: 99% neutralized in 24 negativery charged. Surface of hiter creaks the cell memorane hours in a Testing Container.

Bacteria Test method: JIS L 1902, Tested Organization: Boken Quality Evaluation Institute, Test Report No: 29020006998-1, Test result: 99% neutralized in 18 hours in a Petri dish. Mold Test method: JIS 2911, Tested Organization: Boken Quality Evaluation Institute, Test Report No: 29020006906-1, Test result: No moldgrowth was confirmed. Allergen Test method: ELISA, Tested Organization: Daiwa Chemical Industries Co., Ltd, Test Report No: 2021B267, Test result: 96% neutralized in 24 hours.

## Positively charged antiviral detergen surface of filter breaks the cell mem and deactivates the growth of virus.

#### **Dual Barrier Coating**

Mitsubishi Electric's Dual Barrier Coating prevents dust and greasy dirt from accumulating on the inner surface of the indoor unit, keeping your air conditioner clean. Hydrophilic material

#### Self Clean

When Self Clean Mode is activated, fan operation starts after cooling/dry mode. This operation helps to dry inside indoor unit to prevent molds and odors. You can feel the clean air without frequent cleaning by yourself.

1 High humidity inside the unit, which can lead to mold growth and odors.

Airflow operation suppresses mycelial growth.

\*When SELF CLEAN operation is set, it performs for 25 minutes when unit is stopped after COOL/DRY operation.

SELF CLEAN operation performs when: COOL/DRY is operated more than 3 minutes.

The fan is stopped for the first 3 minutes. Then, the horizontal vane is set to higher than angle 1 and the fan is operated for 25 minutes.

To enable this function, press "Self Clean Mode" button on remote controller. (Default setting is OFF)

#### Quietness 18dB

# Noiseless 18dB 18dB Super Quiet

Quiet, relaxing space is within reach. Operational noise is 18dB (25/35 classes), which is so quiet that you might even forget the air conditioner is on.

#### Night mode

When Night Mode is activated using the wireless remote controller, air conditioner operation will switch to the following settings.

- The brightness of the operation indicator lamp will become dimmer.
- The beeping sound will be disabled.
- The outdoor operating noise will be 3dB lower than the rated operating noise specification.

#### •

#### Wider Heating Operation Range

Mitsubishi Electric technology ensures that the unit will operate even when the outside temperature is down to -20°C.

# Guaranteed heating operation range is extended to -20°C AY series -20°C -15°C OutdoorTemperature(°C)

#### **Outdoor Units for Cold Region**

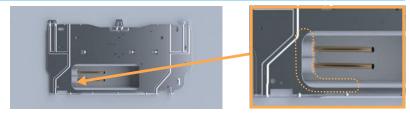

Single split-type outdoor units are available in both standard and heater-equipped units. An electric heater is installed in each unit to prevent freezing in cold outdoor environments.

# Standard Units Heater Installed MUZ-AY25/35/42VG MUZ-AY50VG MUZ-AY50VGH MUZ-AY50VGH

<sup>\*</sup>The cooling/heating capacity may drop.

#### Back Plate with a Hole

With a hole as default in the center of the back plate, the piping can be easily taken out from the back. The edge of the hole is reinforced to ensure the strength.

The edge of the hole is reinforced to ensure the strength.

#### **Spacer**

A part of the packing material can be used as a spacer to lift indoor unit during the left-side piping work, which makes stable installation work possible.

#### Built-in Wi-Fi & App Control

Indoor unit is equipped with Wi-Fi interface which allows you to access MELCloud app, providing you with a flexible control of air conditioner on your smartphone, tablets, and PC.

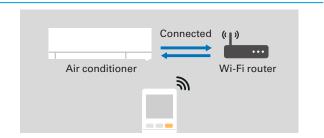

[ key control and monitoring features ]

- On/Off
- Check and set driving conditions
- Notification of weather conditions from current location
- Weekly timer set
- Energy consumption check
- Air purification on/off

#### Easy Wi-Fi Set Up

You can easily connect Wi-Fi adaptor in the indoor unit and your local router with just a simple operation of remote controller.

#### Remote Controller features

The remote controller screen is equipped with LED backlight. The luminous screen allows you to check the setting easily even in the dark. You can easily connect Wi-Fi adaptor in the indoor unit and your local router with just a simple operation of remote controller.

### MSZ-AP SERIES

Introducing a compact and stylish indoor unit with various capacity, designed to match number of rooms. High performance indoor and outdoor units enabled to achieve "Rank A<sup>+++</sup>" for SEER. \*MSZ-AP20VG

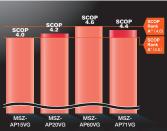

#### High energy saving

The classes from the low-capacity 25 to the high-capacity 60, have achieved either the "Rank  $A^{+++}$ " or "Rank  $A^{++}$ " for SEER and SCOP as energy-savings rating. Our air conditioners are contributing to reduce energy consumption in a wide range.

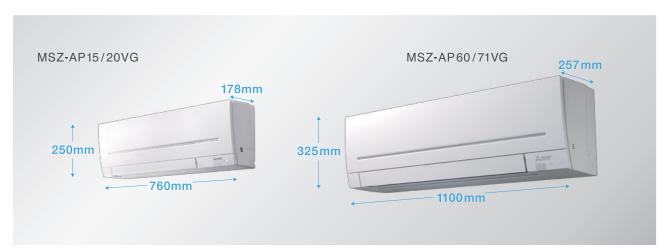

#### Compact and stylish

All the classes are introduced as single-split and multi-systems. From small rooms to living rooms, it is possible to coordinate residences with a unified design.

#### **■**Living

**■**Study

■Bedroom

#### Evolved comfortable convenience function

# **Horizontal Airflow**

The new airflow control which spreads across the ceiling eliminates the uncomfortable drafty feeling.

# **Auto Vane Control**

Auto vanes can be moved left and right, and up and down using the remote controller.

# The Function

#### "Weekly Timer"

Easily set desired temperatures and operation start/stop times to match lifestyle patterns. Reduce wasted energy consumption by using the timer to prevent forgetting to turn off the unit and eliminate temperature setting adjustments.

#### ■ Example Operation Pattern (Winter/Heating mode)

Settings

Pattern Settings: Input up to four settings for each day

**Settings:** •Start/Stop operation •Temperature setting \*The operation mode cannot be set.

#### ■ Easy set-up using dedicated buttons

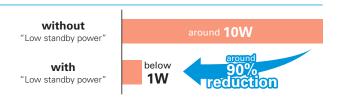

- Start by pushing the "SET" button and follow the instructions to set the desired patterns. Once all of the desired patterns are input, point the top end of the remote controller at the indoor unit and push the "SET" button one more time. (Push the "SET" button only after inputting all of the desired patterns into the remote controller memory. Pushing the "CANCEL" button will end the set-up process without sending the operation patterns to the indoor unit.

   It takes a few seconds to transmit the Weekly Timer operation patterns to the indoor unit. Please continue to point the remote controller at the indoor unit until all data has been sent.

   When "Weekly Timer" is set, temperature can not be set 10°C. (only for 15/20 models)

#### Low Standby Power

Electrical devices consume standby power even when they are not in actual use. While we obviously strive to reduce power consumption during actual use, reducing this wasted power that cannot be seen is also very important.

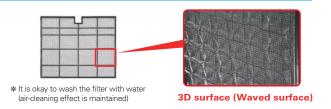

#### V Blocking Filter

V Blocking Filter with antiviral effect inhibits 99% of adhered virus, and other harmful substances, such as bacteria, mold and allergen. Two-layered filter with non-woven fabric and electrostatic filter can effectively capture and remove small particles from the air in your room.

#### Air Purifying Filter

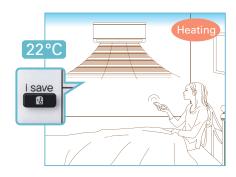

This filter generates stable antibacterial and deodorising effects. The size of the three-dimensional surface has been increased as well, enlarging the filter capture area. These features give the Air Purifying Filter better dust collection performance than conventional filters. The superior air-cleaning effectiveness raises room comfort yet another level.

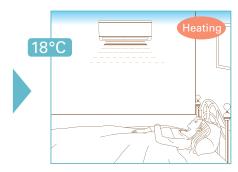

#### "i save" Mode

"is save" is a simplified setting function that recalls the preferred(preset) temperature by pressing a single button on the remote controller. Press the same button twice in repetition to immediately return to the previous temperature setting. Using this function contributes to comfortable, waste-free operation, realising the most suitable air conditioning settings and saving on power consumption when, for example, leaving the room or going to bed.

 $\bigstar$  Temperature can be preset to 10°C when heating in the "i-save" mode

#### Night Mode

When Night Mode is activated using the wireless remote controller, air conditioner operation will switch to the following settings.

- The brightness of the operation indicator lamp will become dimmer.
- The beeping sound will be disabled.
- The outdoor operating noise will drop to 3dB lower than the rated operating noise specification.
- \*The cooling/heating capacity may drop.

#### Built-in Wi-Fi Interface

The indoor unit is equipped with a Wi-Fi Interface inside an exclusive pocket in the unit.

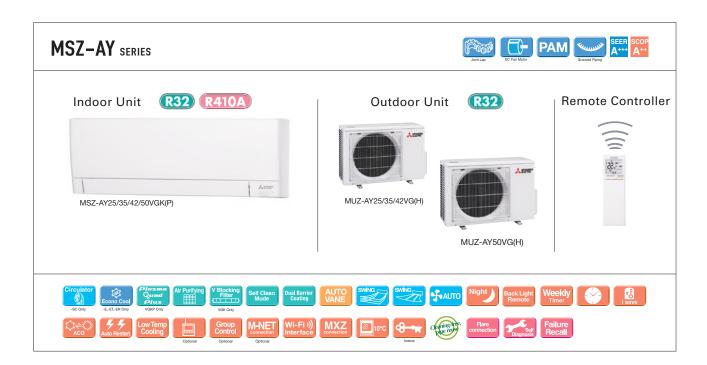

This eliminates the need to install a Wi-Fi interface, and also contributes to the beautiful appearance since the interface is hidden.

#### **LED Backlight Remote Controller**

Blacklight function incorporated, making screen easy to read in the dark. Even in dimly lit rooms, the screen can be seen clearly for trouble-free remote controller operation.

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or Gassaemble the product yourself or product yourself and always ask a professional. The GWP of 182 is 675 in the IPCC 4th Assessment Report.

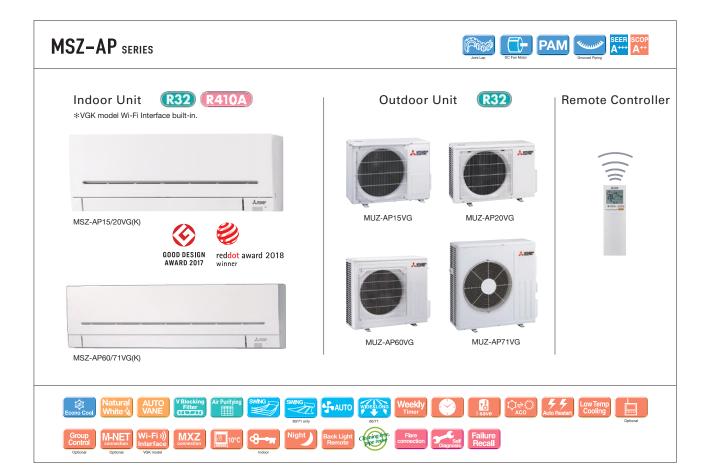

(2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(3) SH: Super High

(4) SEER, SCOP and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

(5) Please see page 57-58 for heating (warmer season) specifications.

<sup>(1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or 6482 is 675 in the IPCC 4th Assessment Report.

(2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(3) SHz. Super High

(4) SEER, SCO2 and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

(5) Please see page 57-59 for heating (warmer season) specifications.

### MS7-E

Developed to complement modern interior room décor, Kirigamine ZEN air conditioners are available in three colours specially chosen to blend in naturally wherever installed.

#### Stylish Line-up Matches Any Room Décor

**Energy-efficient Operation** 

The streamlined wall-mounted indoor units have eloquent silver-bevelled edges, expressing sophistication and quality. Combining impressively low power consumption and quiet yet powerful performance, these units provide a bestmatch scenario for diverse interior designs while simultaneously ensuring maximum room and energy savings.

All models in the series have achieved high energy-savings rating, and are contributing to reduced energy consumption in homes, offices and a range of other settings. Offered in a variety of output capacities and installation patterns, the vast applicability promises an ideal match for any user.

#### Quiet Comfort All Day Long

Mitsubishi Electric's advanced "Silent Mode" fan speed setting provides super-quiet operation as low as 19dB for EF18/22/25 models for cooling. This unique feature makes the Kirigamine ZEN series ideal for use in any situation

#### Noise Level Human hearing limits Quiet passenger Subway car car interio Sound of Library interior (40km/h) rustling leaves (Extremely quiet) 10dB 80dB 60dB 40dB 19<sub>dB</sub> An in-company investigation

#### **Superior Exterior** and Operating Design Concept

The indoor unit of the Kirigamine ZEN keeps its amazingly thin form even during operation. The only physical change notable is the movement of the variable vent. As a result, a slim attractive look is maintained.

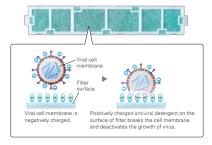

#### V Blocking Filter

V Blocking Filter with antiviral effect inhibits 99% of adhered

virus, and other harmful substances, such as bacteria, mold

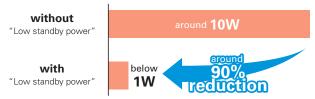

and allergen.

Two-layered filter with non-woven fabric and electrostatic filter can effectively capture and remove small particles from the air in your room.

#### Low Standby Power

Electrical devices consume standby power even when they are not in actual use. While we obviously strive to reduce power consumption during actual use, reducing this wasted power that cannot be seen is also very important.

#### **Outdoor Units for Cold Region**

(25/35)

Single split-type outdoor units are available in both standard and heater-equipped units. An electric heater is installed in each unit to prevent freezing in cold outdoor environments.

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or 6482 is 675 in the IPCC 4th Assessment Report.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(\*3) SHE: Super High

(\*4) SEER, SCOP and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

(\*5) Please see page 57-58 for heating (warmer season) specifications.

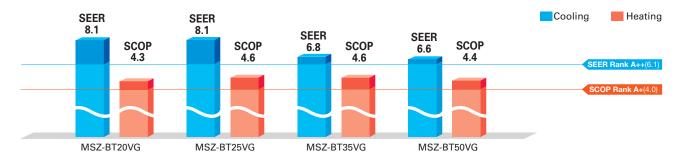

#### High Energy Efficiency for Entire Range of Series

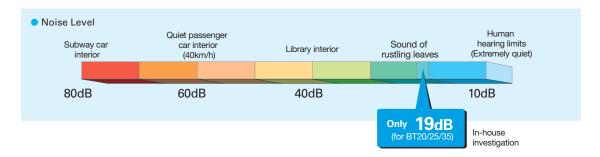

All models in the series, from the low-capacity 20 to the high-capacity 50, have achieved the "Rank A++" for SEER and size 25 and 35 have achieved the "Rank  $A^{++}$ " for SCOP as energy-savings rating. For home use, such as in bedrooms and living rooms, to light commercial use, such as in offices, our air conditioners are contributing to reduced energy consumption in a wide range.

#### **Quiet Operation**

The indoor unit noise level is as low as 19dB for AP Series, offering a peaceful inside environment.

#### **New Remote Controller**

#### New stylish and compact remote controller features easy-read big display and simple button position with fundamental functions.

#### Built-in Wi-Fi Interface

(MSZ-BT20/25/35/50VGK)

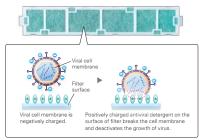

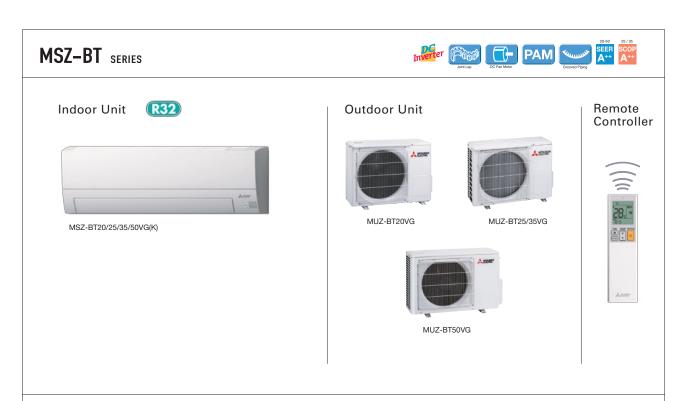

The indoor unit is equipped with a Wi-Fi Interface inside an exclusive pocket in the unit. This eliminates the need to install a Wi-Fi interface, and also contributes to the beautiful appearance since the interface is hidden.

#### V Blocking Filter

V Blocking Filter with antiviral effect inhibits 99% of adhered virus, and other harmful substances, such as bacteria, mold and allergen. Two-layered filter with non-woven fabric and electrostatic filter can effectively capture and remove small particles from the air in your room.

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or GRassemble the product yourself and always ask a professional.

The GWP of R32 is 675 in the IPCC 4th Assessment Report.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(\*3) SHI: Super High

(\*4) SEER, SCOP and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

(\*5) Please see page 57-58 for heating (warmer season) specifications.

MSZ-HR SERIES

Compact, high-performance indoor and outdoor units with R32 that is low global warming potential compared with the current refrigerant R410A contribute to room comfort and to prevent global warming.

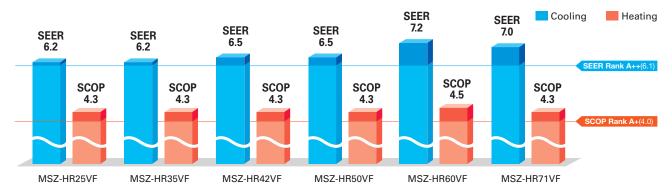

#### "Rank A++/A+" Energy Savings Achieved for Entire Range of Series

All models in the series, from capacity 25 to 71, have achieved the "Rank A++" for SEER and "Rank A+" for SCOP as energy-savings rating, thanks to Mitsubishi Electric's inverter technologies which are adopted to provide automatic adjustment of operation load according to need.

#### Simple and Friendly Design

The round front surface provides a simple and friendly impression. And the width of indoor unit is compact, making installation in smaller, tighter spaces possible.

#### Wi-Fi and System Control

#### Wi-Fi Interface (Built-in) \*Only VFK model

Built-in interface enabling users to control air conditioners and check operating status via devices such as personal computers, tablets and smartphones.

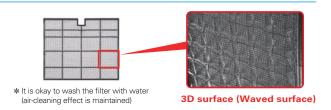

#### **System Control Interface (Optional)**

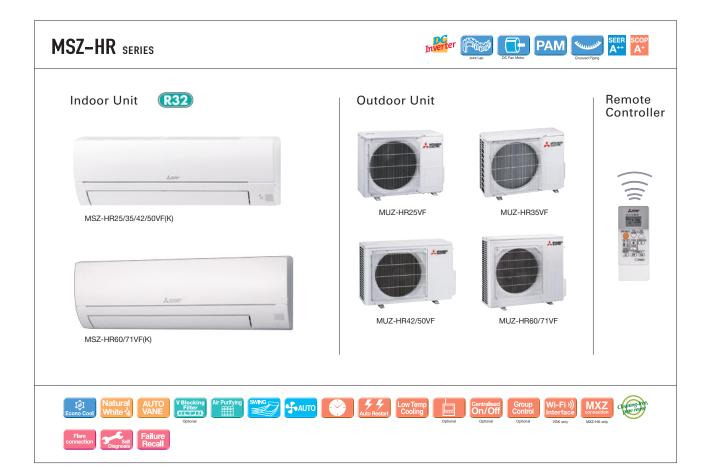

- •Remote on/off operation is possible by input to the connector.
- Depending on the interface used, connecting a wired remote-control such as the PAR-41MAA is possible.
- •Centralised control is possible when connected to M-NET.
- \*Wi-Fi Interface and System Control Interface cannot be used simultaneously.

# Wi-Fi interface Smartphone System control interface

#### Air Purifying Filter

This filter generates stable antibacterial and deodorising effects. The size of the three-dimensional surface has been increased as well, enlarging the filter capture area. These features give the Air Purifying Filter better dust collection performance than conventional filters. The superior air-cleaning effectiveness raises room comfort yet another level.

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or Gasssemble the product yourself and always ask a professional.

The GWP of R32 is 675 in the IPCC 4th Assessment Report.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(\*3) SHE: Super High

(\*4) SEER, SCOP and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

(\*5) Please see page 57-59 for heating (warmer season) specifications.

**R32** 

### MSZ-DW SERIES

Introducing an indoor unit that is compact yet packed with a variety of features.

High energy saving performance and Air Purifying Filter bring you a comfortable indoor environment.

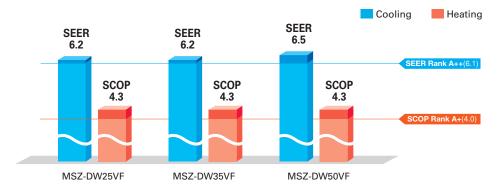

#### Inverte

#### **Energy Saving**

Mitsubishi Electric's inverter technologies are adopted to provide automatic adjustment of operation load according to need. This reduces excessive consumption of electricity, and thereby realises Energy Rank "A++" for SEER (cooling) and "A+" for SCOP (heating).

#### Simple and Compact Design

The stylish design makes it a natural match for any room. The width of indoor units is compact, making installation in smaller, tighter spaces possible.

#### Air Purifying Filter

Air Purifying Filter generates stable antibacterial, antifungal, and deodorant effects. The three-dimensional surface expands the filter's capture area and contributes to the better dust collection performance than conventional filters.

#### Simple Control

The simple remote controller and functions provide the easy control solution and comforts of life.

#### Wi-Fi and System Control

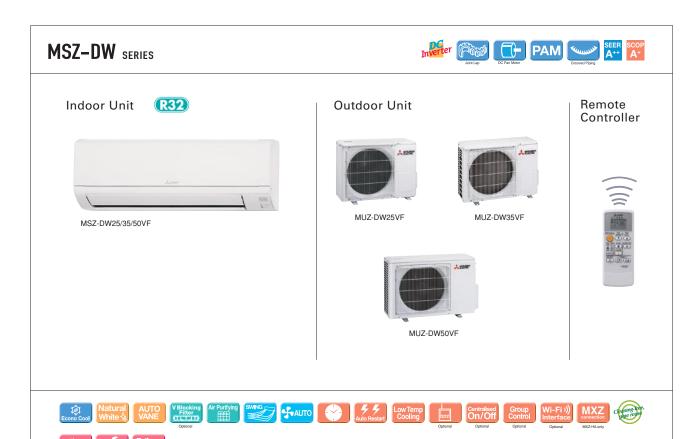

#### Wi-Fi Interface (Optional)

Optional interface and a Cloud-based solution "MELCloud" enable users to control air conditioners and check operating status via devices such as laptops, tablets and smartphones.

#### System Control Interface (Optional)

- Remote on/off operation is possible by input to the connector.
- Depending on the interface used, connecting a wired remote control such as the PAR-41MAA is possible.
- Centralised control is possible when connected to M-NET.

<sup>(1)</sup> Refigerant leakage contributes to dimate change. Refigerant with lower global warming potential (GMP) would contribute less to global warming than a refrigerant with higher GMP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GMP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or 64 Assessmelte the product yourself and always ask a professional.

The GWP of R32 is 675 in the IPCC 4th Assessment Report.

(2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(3) SHI. Super High

(4) SEER, SCOP and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

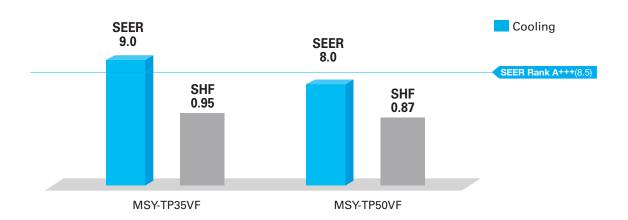

(5) Please see page 57-59 for heating (warmer season) specifications.

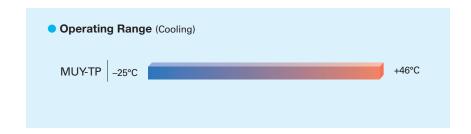

Cooling only model with high-perfomance provides high SHF in various environments thanks to wide operation range.

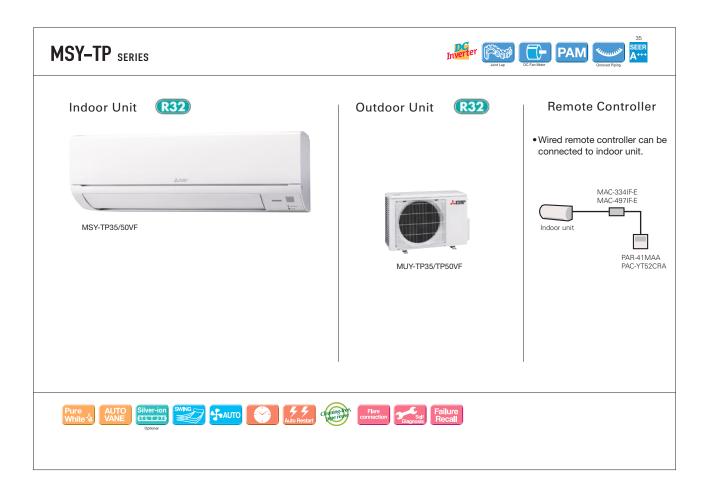

#### High Energy-Saving Performance with High SHF

#### Wide Cooling Operating Range

As a result of an extended operating range in cooling, these models accommodate a wide range of usage environments and applications.

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

The GWP or RS2 is 675 in the IPCC 4th Assessment Report.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(\*3) SH: Super High

(\*4) SEER and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011.

## MSZ-S SERIES MSZ-G SERIES

Introducing a compact and stylish indoor unit with amazingly quiet performance. Not only are neat installations in small bedrooms possible, increase energy-savings by selecting the optimal capacity required for each room.

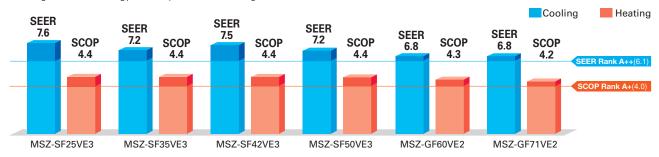

#### "Rank A++/A+" Energy Savings Achieved for Entire Range of Series

All models in the series, from the low-capacity 25 to the high-capacity 71, have achieved the "Rank A\*" for SEER and "Rank A\*" for SCOP as energy-savings rating. For home use, such as in bedrooms and living rooms, to light commercial use, such as in offices, our air conditioners are contributing to reduced energy consumption in a wide range.

#### Wide Line-up

Eight different indoor units (Model 15-71) are available to meet your diversified air conditioning needs.

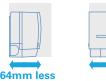

#### Compact and Stylish

(MSZ-SF15/20VA)

The stylish, square indoor unit adds a touch of class to any room interior. The compact design is 64mm thinner than our previous indoor unit with the lowest output capacity (MSZ-GE22VA).

#### Comparison with our previous model GE

#### Family Design

(MSZ-SF15/20/25/35/42/50)

Models in the 25-50 class are introduced as single-split units while retaining the popular design of the SF15/20VA\* as indoor units exclusively for multi-systems. From small rooms to living rooms, it is possible to coordinate residences with a unified design.
\*Size may vary.

#### "Weekly Timer"

Easily set desired temperatures and operation start/stop times to match lifestyle patterns. Reduce wasted energy consumption by using the timer to prevent forgetting to turn off the unit and eliminate temperature setting adjustments.

#### ■ Example Operation Pattern (Winter/Heating mode)

**Settings** 

Pattern Settings: Input up to four settings for each day

**Settings:** •Start/Stop operation •Temperature setting \*The operation mode cannot be set.

#### ■ Easy set-up using dedicated buttons

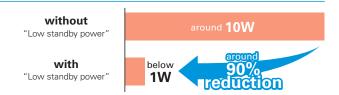

- Start by pushing the "SET" button and follow the instructions to set the desired patterns. Once all of the desired patterns are input, point the top end of the remote controller at the indoor unit and push the "SET" button one more time. (Push the "SET" button only after inputting all of the desired patterns into the remote controller memory. Pushing the "CANCEL" button will end the set-up process without sending the operation patterns to the indoor unit. •It takes a few seconds to transmit the Weekly Timer operation patterns to the indoor unit. •When "Weekly Timer" is set, temperature can not be set 10°C.

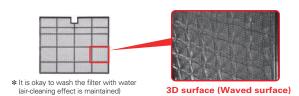

#### Low Standby Power

Electrical devices consume standby power even when they are not in actual use. While we obviously strive to reduce power consumption during actual use, reducing this wasted power that cannot be seen is also very important.

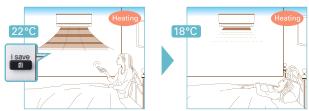

#### Air Purifying Filter (MSZ-SF25/35/42/50, MSZ-GF60/71)

This filter generates stable antibacterial and deodorising effects. The size of the three-dimensional surface has been increased as well, enlarging the filter capture area. These features give the Air Purifying Filter better dust collection performance than conventional filters. The superior air-cleaning effectiveness raises room comfort vet another level.

#### "i save" Mode

"i save" is a simplified setting function that recalls the preferred (preset) temperature by pressing a single button on the remote controller. Press the same button twice in repetition to immediately return to the previous temperature setting. Using this function contributes to comfortable, waste-free operation, realising the most suitable air conditioning settings and saving on power consumption when, for example, leaving the room or going to bed.

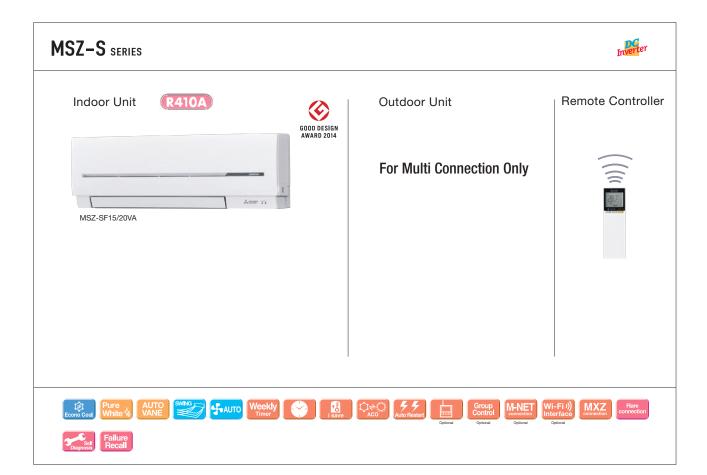

\* Temperature can be preset to 10°C when heating in the "i-save" mode.

#### Outdoor Units for Cold Region

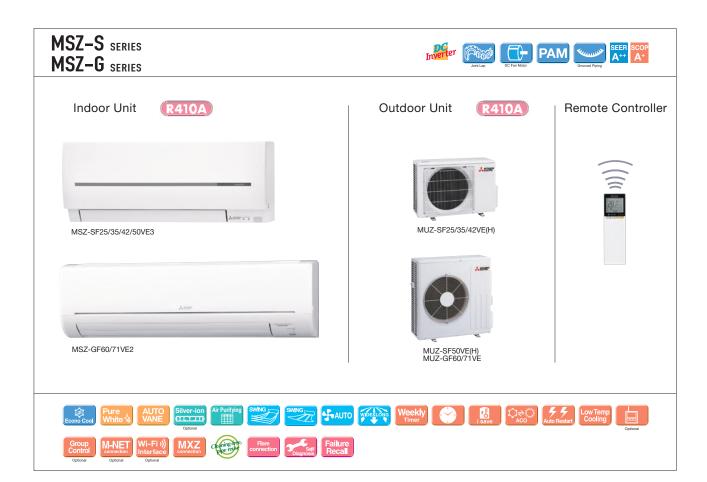

Single split-type outdoor units are available in both standard and heater-equipped units. An electric heater is installed in each unit to prevent freezing in cold outdoor environments.

#### Advanced Inverter Control – Efficient Operation All the Time

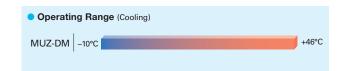

Mitsubishi Electric's cutting-edge inverter technologies are adopted to provide automatic adjustment of operation load according to need. This reduces excessive consumption of electricity, and thereby realises an Energy Rank "A+".

#### Wider Cooling Operating Range

As a result of an extended operating range in cooling, these models accommodate a wider range of usage environments and applications than previous models.

#### Wi-Fi and System Control

#### Wi-Fi Interface (Optional)

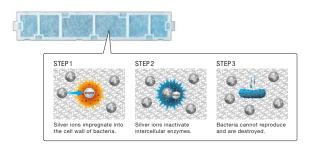

Optional interface enabling users to control air conditioners and check operating status via devices such as personal computers, tablets and smartphones.

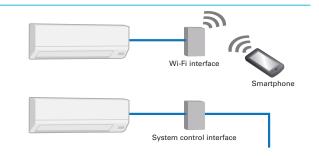

#### **System Control Interface (Optional)**

- •Remote on/off operation is possible by input to the connector.
- Depending on the interface used, connecting a wired remote-control such as the PAR-41MAA is possible.
- •Centralised control is possible when connected to M-NET.
- \*Wi-Fi Interface and System Control Interface cannot be used simultaneously.

#### Silver-ionized Air Purifier Filter

The high performance filter is attached as standard. Captures the bacteria, pollen and other allergens in the air and neutralises them.

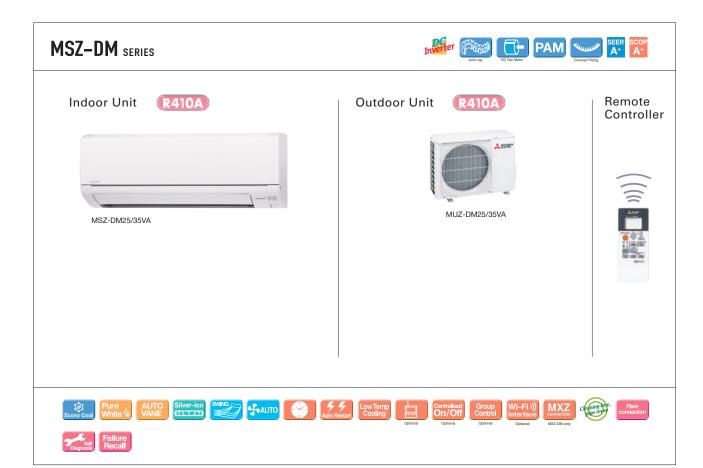

#### **Compact Units**

The width of both indoor and outdoor units are compact, making installation in smaller, tighter spaces possible.

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or Ref Nation is 2088 in the IPCO 4th Assessment Report.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(\*3) SHE: Super High

(\*4) SEER, SCOP and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

(\*5) Please see page 57-59 for heating (warmer season) specifications.

#### Stylish Design with Flat Panel Front

A stylish flat panel design is employed for the front of the indoor unit. The simple look matches room aesthetics.

#### Advanced Inverter Control – Efficient Operation All the Time

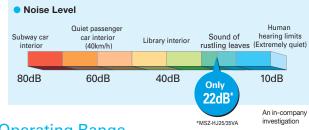

#### Silent Operation

Quiet, relaxing space is within reach. Operational noise is a low 22dB (25/35 classes). Operation is so silent you might even forget the air conditioner is on.

#### Long Piping Length

Compared to previous models, the piping length is significantly increased, further enhancing the ease and flexibility of installation.

|                              | MSZ-HJ60/71 | MSZ-HJ25/35/50 | MSZ-HC |
|------------------------------|-------------|----------------|--------|
| Max piping length            | 30m         | 20m            | 10m    |
| Max piping height difference | 15m         | 12m            | 5m     |

#### **Operating Range**

As a result of an extended operating range in cooling, these models accommodate a wider range of usage environments and applications than previous models.

#### **Compact Units**

The widths of both indoor and outdoor units are compact, making installation in smaller, tighter spaces possible.

Indoor Unit: MSZ-HJ25/35/50VA

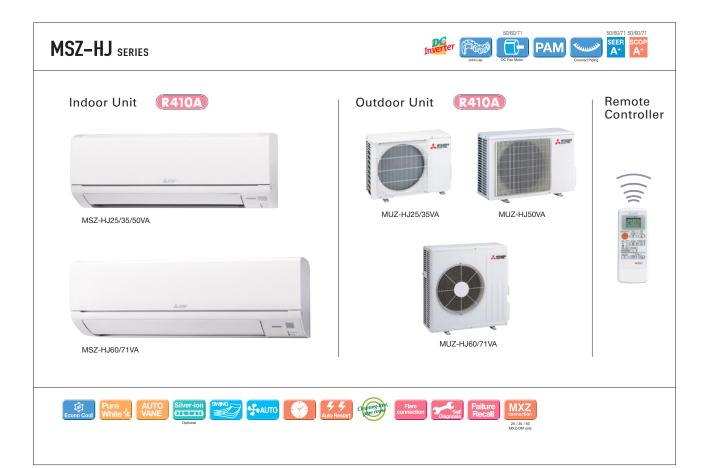

Only 799mm width

Outdoor Unit: MUZ-HJ25/35VA

Only 699mm width

Compared to other models, width is down by 16%.

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or GRAPOR and always ask a professional.

The GWP of R410A is 2088 in the IPCO 4th Assessment Report.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(\*3) SHI: Super High

(\*4) SEER, SCOP and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

(\*5) Please see page 57-59 for heating (warmer season) specifications.

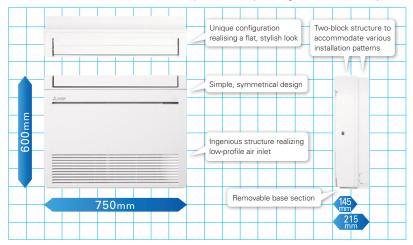

MFZ-KT25/35/50/60VG **R32** 

Raise the Value of Your Room to the Next Level.

#### Simple, Flat Design

Uneven surfaces have been smoothed to provide a simple design with linear beauty, harmonised with all types of interiors.

#### **New Line-up**

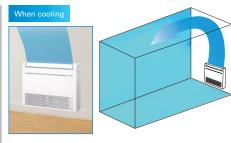

New models have been introduced to expand the line-up. The diverse selection enables the best solution for both customers and locations.

| Capacity | 2.5kW    | 3.5kW | 5.0kW | 6.0kW |  |  |  |  |  |

#### Multi-flow Vane

Three uniquely shaped vanes control the airflow and allow the freedom to customize comfort according to preferences.

\*The downward airflow is also possible as well as heating.

#### Weekly Timer (Introduced in response to market demand)

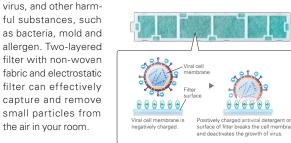

Temperature settings and On/Off control can be managed over a period of one week using the Weekly Timer. Up to eight setting patterns per calendar day are possible.

#### V Blocking Filter

V Blocking Filter with antiviral effect inhibits 99% of adhered

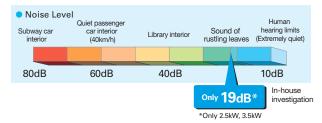

ful substances, such as bacteria, mold and allergen. Two-layered filter with non-woven fabric and electrostatic filter can effectively capture and remove small particles from the air in your room.

#### **Quiet Operation**

The indoor unit noise level is as low as 19dB for MFZ Series, offering a peaceful inside environment.

\* Single connection only

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or Gasssemble the product yourself and always ask a professional. The GWP of R41OA is 2088 in the IPCC 4th Assessment Report.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(\*3) SHz Super High

(\*4) SEER, SCOP and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

(\*5) SEER and SCOP are based on 2009/125/EC.Energy-related Products Directive and Regulation(EU) No.206/2012.

## MLZ SERIES

Introducing a new type of ceiling cassette for the Multi-Split Series with streamed interior dimensions and a sharp, sleek appearance.

#### Slim Design KY KP

Industry leading slim body realized a simple design with linear beauty.

#### Ceiling Mounted KY KP

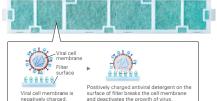

Installing the ceiling-mounted MLZ Series unit in a room creates a more spacious feel that enhances room comfort. This overhead format is also an excellent solution when lighting equipment is installed at the centre of the room and fixtures such as book shelves are mounted on wall surfaces.

#### Slim Body

V Blocking Filter with antiviral effect inhibits 99% of adhered virus and other harmful substances, such as bacteria, mold and allergen. Two-layered filter with non-woven fabric and electrostatic filter can effectively capture and remove small particles from the air in your room.

#### 

Dual-level airflow selection is engineered to accommodate specific ceiling heights. This is a key feature for adjusting airflow effectively when it is either too strong or too weak due to being mismatched with the height of the ceiling.

|              | 20   | 25   | 35   | 50   |
|--------------|------|------|------|------|
| Standard     | 2.4m | 2.4m | 2.4m | 2.4m |
| High ceiling | 2.7m | 2.7m | 2.7m | 2.7m |

#### Auto Vane Control KY KP

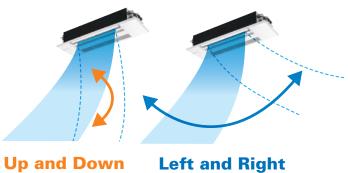

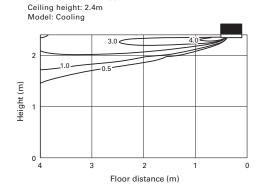

Outlet vanes can be moved left and right, and up and down using the remote controller. This improved airflow control feature solves the problem of drafts.

[Horizontal Airflow] Model name: MLZ-KP35VF

Horizontal Airflow KY KP

The new airflow control completely eliminates that uncomfortable drafty-feeling with the introduction of a horizontal airflow that spreads across the ceiling. The ideal airflow for offices and restaurants.

**Up and Down** 

\*Only available when Econo Cool is set.

#### Built-in Weekly Timer Function W KP

Easily set desired temperatures and operation ON/OFF times to match lifestyle patterns. Reduce wasted energy consumption by using the timer to prevent forgetting to turn off the unit and eliminate temperature setting adjustments.

#### ■ Example Operation Pattern (Winter/Heating mode)

**Settings** 

Pattern Settings: Input up to four settings for each day

Settings: •Start/Stop operation •Temperature setting \*The operation mode cannot be set.

#### ■ Easy set-up using dedicated buttons -

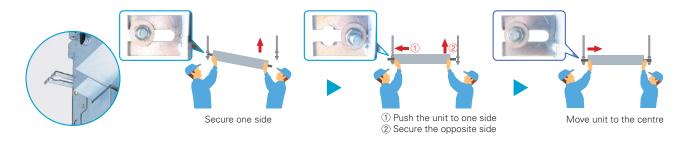

- · Start by pushing the "SET" button and follow the instructions to set the desired patterns. Once all of the desired patterns are input, point the top end of the remote controller at the indoor unit and push the "SET" button one more time. (Push the "SET" button only after inputting all of the desired patterns into the remote controller memory. Pushing the "CANCEL"
- button will end the set-up process without sending the operation patterns to the indoor unit.

  It takes a few seconds to transmit the Weekly Timer operation patterns to the indoor unit. Please continue to point the remote controller at the indoor unit until all data has been sent.

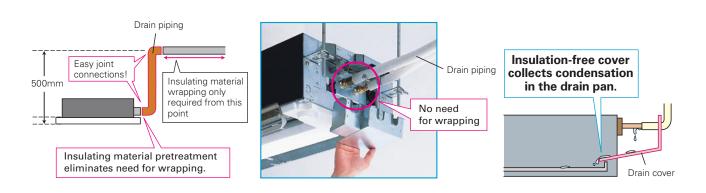

#### **Easy Installation**

#### Temporary hanging hook KY KP

Work efficiency has improved during installation.

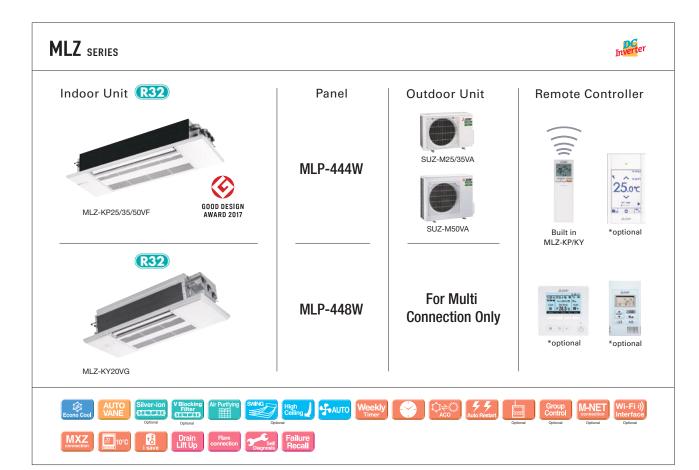

#### Refrigerant Piping Supporters + Drain Cover W KP

#### 

No need to put off the panel even when the unit has some troubles to be checked inside. Simply open the panel to see the inside of the unit.

<sup>(1)</sup> Retirgerant leakage contributes to climate change. Retirgerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or 64 flows and always ask a professional. The GWP of R41OA is 2088 in the IPCC 4th Assessment Report.

(2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(3) SHE Super High

(4) SEER, SCOP and other related description are based on COMMISSION DELECATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

<sup>(1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of COs, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

(2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(3) Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 150. This means that if 1 kg of COs, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

#### **Specification on Warmer/Colder Condition**

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(\*3) Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

#### **SELECTION**

Series line-up consists of two types of indoor units. Choose the model that best matches room conditions.

#### **SELECT INDOOR UNIT**

Select the optimal unit and capacity required to match room construction and air conditioning requirements.

#### **Units without Remote Controller**

SLZ-M15FA2

(Multi split series connection only)

SLZ-M25FA2

SLZ-M35FA2

<sup>\*</sup>To confirm compatibility with the MXZ Series multi-type system, refer to the MXZ Series page.

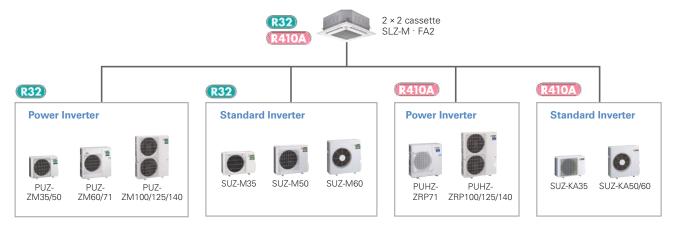

Compact, lightweight ceiling cassette units with 4-way air outlets provide maximum comfort by evenly distributing airflow throughout the entire room.

#### 2x2 Cassette Line-up

The SLZ series was previously only able to be connected to standard inverters and some power inverters. However, it can now also be connected to low-capacity power inverters. The ability to connect to a high-performance power inverter allows us to offer a wider range of options to our customers.

#### **New lineup**

1.5kW has been introduced for multi connection. The diverse selection enables the best solution for both customer and location.

| Capacity | 15 | 25 | 35 | 50 | 60 |
|----------|----|----|----|----|----|
| SLZ-KF   |    | ✓  | ✓  | ✓  | ✓  |
| SLZ-M    | ✓  | ✓  | ✓  | ✓  | ✓  |

#### Beautiful design

The straight-line form introduced has resulted in a beautiful square design. Its high affinity ensures the ability to blend in seamlessly with any interior. The indoor unit is an ideal match for office or store use.

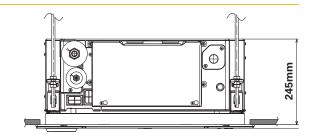

Of course, design matched 2×2 (600mm\*600mm) ceiling construction specifications.

#### The height above ceiling of 245mm

The height above ceiling of 245mm enables fitting into narrow ceiling space. Installation is simple, even when the ceiling spaces are narrow to make the ceilings higher.

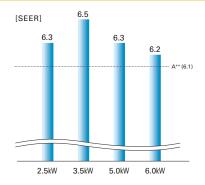

Of course, in addition to our products, replacing competitors' product is simplified too.

#### **Energy-saving Performance\***

The energy-saving performance achieved A++ in SEER and A+ in SCOP.

\*In case of connecting with SUZ-KA-VA6

#### Quietness

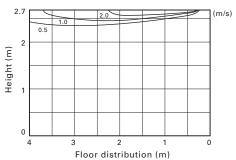

Low sound level has been realized by introduction of 3D turbo fan. New SLZ can give users quieter and move comfortable room condition.

#### **Horizontal Airflow**

The new airflow control completely eliminates that uncomfortable drafty-feeling with the introduction of a horizontal airflow that spreads across the ceiling. The ideal airflow for offices and restaurants.

[Airflow distribution]\* SLZ-M60FA Flow angle,cooling at 20°C (ceiling height 2.7m)

\*Vane angle: Horizontal

#### Easy installation

#### Temporary hanging hook

The structure of the panel has been revised and is now equipped with a temporary hanging hook. This has improved work efficiency during temporary panel installation.

#### No need to remove screws

Installation is possible without removing the screws for control box simply loosen them. This eliminates the risk of losing screws.

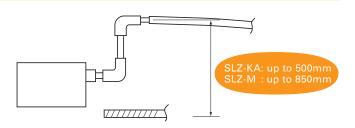

#### ■ Control box cover

#### **Drain lift**

As the result of using a larger drain pan, the maximum drain lifting height has been up to 850mm, greatly enhancing construction flexibility compared to the existing model.

#### 3D i-see Sensor for S & P SERIES

#### Detects number of people

#### Room occupancy energy-saving mode

The 3D i-see Sensor detects the number of people in the room. It then calculates the occupancy rate based on the maximum number of people in the room up to that point in time in order to save air-conditioning power. When the occupancy rate is approximately 30%, air-conditioning power equivalent to 1°C during both cooling and heating operation is saved. The temperature is controlled according to the number of people.

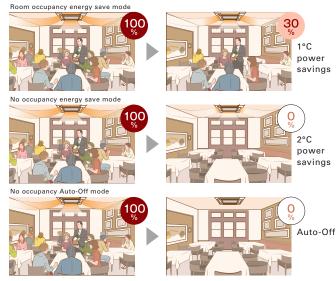

#### No occupancy energy-saving mode

When 3D i-see Sensor detects that no one is in the room, the system is switched to a pre-set power-saving mode. If the room remains unoccupied for more than 60min, air-conditioning power equivalent to 2°C during both cooling and heating operation is saved. This contributes to preventing waste in terms of heating and cooling.

#### No occupancy Auto-OFF mode\*

When the room remains unoccupied for a pre-set period of time, the air conditioner turns off automatically, thereby providing even greater power savings. The time until operation is stopped can be set in intervals of 10min, ranging from 60 to 180 min.

\* When MA Remote Controller is used to control multiple refrigerant systems, "No occupancy Auto-OFF mode" cannot be used.

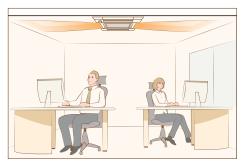

\*PAR-41MAA is required for each setting

#### Detects people's position

#### Direct/Indirect settings\*

Some people do not like the feel of wind, some want to be warm from head to toe. People's likes and dislikes vary. With the 3D i-see Sensor, it is possible to choose to block or not block to the wind for each vane.

\*PAR-41MAA or PAR-SL101A-E is required for each setting.

#### Seasonal airflow\*

#### <When cooling>

Saves energy while keeping a comfortable effective temperature by automatically switching between ventilation and cooling. When a pre-set temperature is reached, the air conditioning unit switches to swing fan operation to maintain the effective temperature. This clever function contributes to keeping a comfortable coolness.

#### <When heating>

The air conditioning unit automatically switches between circulator and heating. Wasted heat that accumulates near the ceiling is reused via circulation. When a pre-set temperature is reached the air conditioner switches from heating to circulator and blows air in the horizontal direction. It pushes down the warm air that has gathered near the ceiling to people's height, thereby providing smart heating.

\*PAR-41MAA is required for each setting.

#### Connectable to Plasma Quad Connect

The optional Plasma Quad Connect SLP-2FAP, SLP-2FALP, SLP-2FALMP2 can be installed on the indoor units.\*1\*2\*3

- \*1 Plasma Quad Connect cannot be used with PAC-SK54/46KF-E (V blocking filter).
- \*2 If Plasma Quad Connect is used with MAC-334/397/587IF-E (Interface), Plasma Quad Connect use the indoor units CN105. Other interface use the another CN105 on Plasma Quad Connect's PCB.
- \*3 If Plasma Quad Connect is used with PAC-SK35VK-E (Valve kit) or PAC-SK39AP-E (Valve kit attachment), Plasma Quad Connect use the indoor units barring holes for valve kit. Valve kit needs to be installed on suspension bolts or on horizontal surface using dedicated attachment optional parts.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R410A is 2088 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than -5°C.

\*4 SEER and SCOP are based on 2009/12/5FC.Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO2, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R410A is 2088 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption who whe appliance is used and where it is located.

\*3 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*4 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

<sup>1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere, This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R410A is 2088 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*4 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

## SEZ SERIES

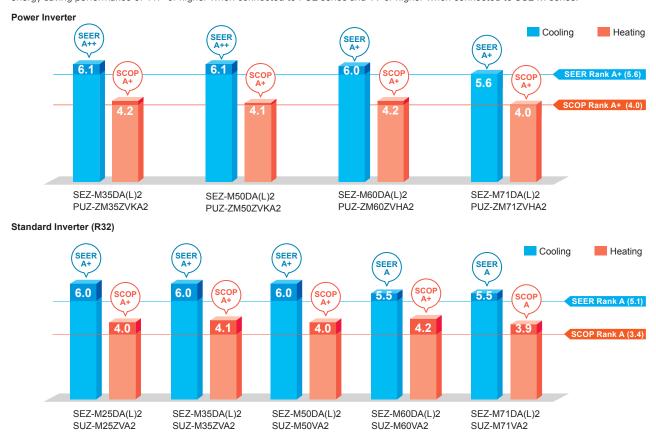

This concealed ceiling-mounted indoor unit series is compact, and fits easily into rooms with lowered ceilings. Highly reliable energy-saving performance makes it a best match choice for concealed unit installations.

#### High Energy Efficiency

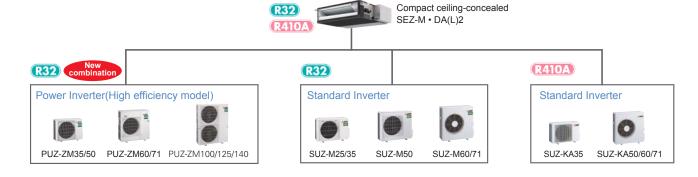

Highly efficient indoor units with DC inverter contribute to a reduction in electricity consumption throughout a year. The SEZ series has achieved energy-saving performance of "A+" or higher when connected to PUZ series and "A" or higher when connected to SUZ-M series.

#### Lineup of compatible outdoor unit has been expanded by power inverter series

Although models in the SEZ series were previously only compatible with the standard inverter, they can now also be connected to small capacity power inverters. The ability to connect to a power inverter with high-performance specifications makes it possible to offer an even wider range of solutions to our customers.

#### Compact Design with a Height of 200 mm

The height of the units is 200 mm for all capacity ranges. Its thin body is suitable for installation in low ceilings with a small cavity space.

| SEZ-M D | A(L)2 | M25 | M35 | M50 | M60 | M71 |
|---------|-------|-----|-----|-----|-----|-----|
| Height  | mm    |     |     |     |     |     |
| Width   | mm    | 790 | 99  | 11  | 90  |     |

#### Low Noise Operation

Low noise operation contributes to a peaceful indoor environment. The SPL of M25/35 model, which is the quietest model among the new series, is as low as 22 dB (ESP 5 Pa, low fan speed setting).

| Cap   | Capa         | acity | M25 | M35 | M50 | M60 | M71 |
|-------|--------------|-------|-----|-----|-----|-----|-----|
| Sound | pressure Fan | High  | 29  | 30  | 36  | 37  | 39  |
| level |              | Mid   | 25  | 26  | 33  | 33  | 34  |
|       |              | Low   | 22  | 22  | 29  | 29  | 29  |

<sup>\*</sup>When fan speed setting is low, the cooling/heating capacity is subject to reduce.

#### Selectable Static Pressure Levels

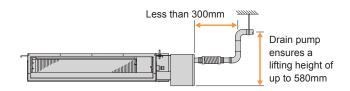

External static pressure can be selected from 5, 25, 35, and 50 Pa (set to 25 Pa at the time of factory shipment).

Four levels Available for All Models

#### **Drain Pump (Optional)**

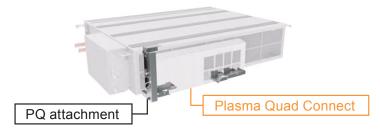

The PAC-KE07DM-E drain pump is available as an option. The drain connection can be raised as high as 580 mm, allowing more freedom in piping layout design.

\*The use of drain pump may increase the operation noise.

#### Connectable to Plasma Quad Connect

The optional Plasma Quad Connect MAC-100FT-E can be installed on the indoor unit's air inlet side. For installation, PQ attachment PAC-HA11PAR is required.

<sup>\*</sup>Operation noise may increase due to the installation environment or the operation status.

#### SEZ-M SERIES

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of COz, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R32 is 675 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than –5°C.

\*4 EER/COP and SEER/SCOP for M35-71 are measured at ESP 25Pa

\*5 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*6 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

\*7 The factory setting of ESP is shown without < >...

\*8 SPL measured at ESP 5Pa.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

The GWP of R410Å is 2088 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 SEER/SCOP are measured at ESP 25Pa.

\*4 SEER and SCOP are based on 2009/125/EC.Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

\*7 SPL measured at ESP 5Pa.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

The GWP of R410Å is 2088 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 SEER/SCOP are measured at ESP 25Pa.

\*4 SEER and SCOP are based on 2009/125/EC.Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

\*6 The factory setting of ESP is shown without < >.

\*7 SPL measured at ESP 5Pa.

### SFZ SERIES

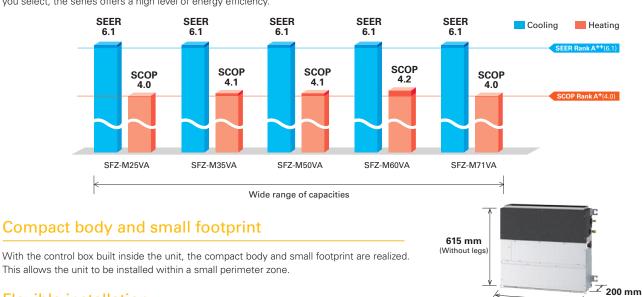

The concealed floor standing type indoor unit is newly introduced to the S-series and can be neatly installed in the perimeter zone. High energy efficiency is achieved across all capacity range. External static pressure, airflow rate, and air intake direction can be selected according to the customer's choice.

700 mm

#### A wide lineup offering high energy efficiency

The SFZ series achieves an A++ rating on the SEER index, and an A+ rating on the SCOP index for all capacity range. No matter which capacity you select, the series offers a high level of energy efficiency.

Air inlet direction from the bottom or front can be selected by changing panel, fan guard and filter.

# Bottom suction \*1 Front suction \*2 Installation with legs Air outlet Air outlet \*Height of unit (with legs) is 690 mm. \*Legs are supplied as accessory with the unit.

- \*1 Select a site where the flow of supply air is not blocked. The unit cannot be placed directly on the floor in the case of bottom suction.
- \*2 Unit with front suction generate more noise compared to bottom suction. Not recommended to be installed in rooms such as bedrooms where quietness is valued.

#### Fan speed

Airflow rate can be selected from 3 patterns; Low-Medium-High.

#### External static pressure

Flexible installation

Four levels of static pressure are available. The ability to select additional static pressure provides flexibility for air outlet configuration.

SFZ-M25/35/50/60/71VA <0>/25/<40>/<60> Pa

The factory setting of external static pressure is shown without brackets (< >).

Refer to "Fan characteristics curves" according to the external static pressure, in the DATA BOOK for the usable range of airflow rate.

The atting the lakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

The GWP of R410A is 2088 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 SEER/SCOP are measured at ESP 25Pa.

\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(IEU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

\*6 The height that includes the duct flange is 638 (713) mm. The values in () show the height of unit with leg.

\*7 The width includes the pipe cover (sheet metal). The values in () show the width that does not include the pipe cover.

\*8 The factory setting of ESP is shown without < >.

\*9 SPL measured at ESP 25Pa.

# **CONTROL TECHNOLOGIES**

# User-friendly Deluxe Remote Controller with Excellent Operability and Visibility

# 2+1 Back-up rotation\*

The use of a three-refrigerant air conditioning system enables you to utilize the back-up, rotation, and cut-in functions. This allows you to implement effective risk management for added peace of mind.

\*Availability of this function is depending on outdoor unit, indoor unit and remote controller

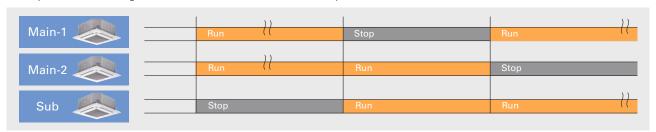

# Back-up Function

In the unlikely event that one of the units stops operation due to an abnormality, the standby unit immediately starts back-up operation. Being fully prepared for a failure guarantees that and operation is always available and gives you the confidence that your system will be reliable in any situation.

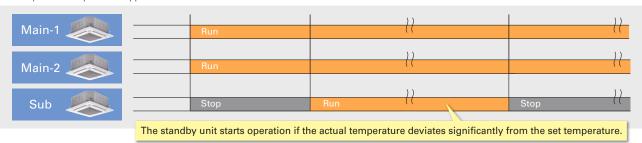

### Rotation Function

A single remote controller is used to operate three-refrigerant air conditioning system in a rotation pattern. Reducing the burden on the equipment allows you to maintain a longer time between maintenance and increases product life.

# **Cut-in Function**

If the actual room temperature greatly differs from the set temperature and two-refrigerant air conditioning system is insufficient, the standby unit starts operation to provide support.

# **SELECTION**

Line-up includes a selection of eight indoor units and four series of outdoor units. Easily construct a system that best matches room air conditioning needs.

\* Some indoor units cannot be used with this unit.

To confirm compatibility with the MXZ Series, refer to the MXZ Series page.

\*Some indoor units cannot be used with this unit.

# Single System Simultaneous Multi-System Twin Allows simultaneous operation of two indoor units on one floor. Single Can cover a large-scale space or dispersed installation on the same floor.

# Connectable Combinations for Inverter Units

# Power Inverter SERIES

Our Eco-conscious Power Inverter Series is designed to achieve industry-leading seasonal chergy-efficiency throught use of New R32 refrigerant and advanced technologies.

R32

PUZ-ZM35/50VKA2

PUZ-ZM60/71VHA2

PUZ-ZM100/125/140V(Y)KA2 PUZ-ZM200/250YKA2

# Industry-leading energy efficiency

Introduction of new R32 refrigerant realises improved cooling efficiency. Rating of more than 7.0 achieved for all capacity range.

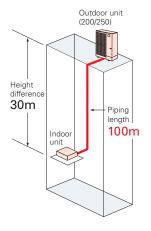

Introduction of new R32 refrigerant reduces energy consumption and realises energy savings.

# Longer piping (60/71/100/125/140/200/250)

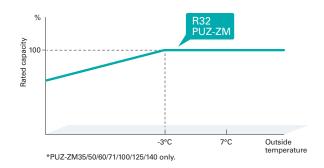

Longer piping length realised for 60, 71, 100, 125, 140, 200 and 250 classes, widely increasing installation flexibility.

|             | Piping Length     |               |  |
|-------------|-------------------|---------------|--|
|             | R410A<br>PUHZ-ZRP | R32<br>PUZ-ZM |  |
| 35/50       | 50m               | 50m           |  |
| 60/71       | 50m               | 55m           |  |
| 100/125/140 | 75m               | 100m          |  |
| 200/250     | 100m              | 100m          |  |

# Rated heating capacity maintained down to –3°C\*

Rated heating capacity maintained even when the outside temperature is down to  $-3\,^{\circ}\text{C}$ . Stay warm even at times of cold weather.

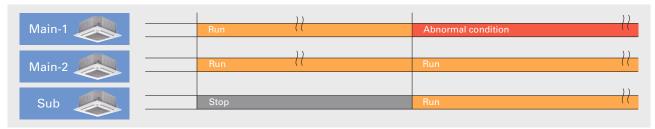

# 2+1 Back-up rotation\*

The use of a three-refrigerant air conditioning system enables you to utilize the back-up, rotation, and cut-in functions. This allows you to implement effective risk management for added peace of mind.

\*Availability of this function is depending on outdoor unit, indoor unit and remote controller.

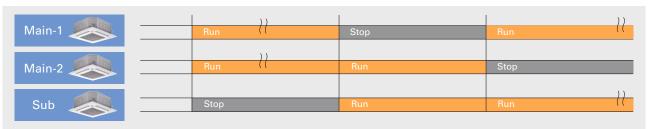

# Back-up Function

In the unlikely event that one of the units stops operation due to an abnormality, the standby unit immediately starts back-up operation. Being fully prepared for a failure guarantees that and operation is always available and gives you the confidence that your system will be reliable in any situation.

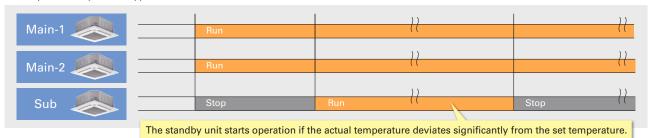

# **Rotation Function**

A single remote controller is used to operate three-refrigerant air conditioning system in a rotation pattern. Reducing the burden on the equipment allows you to maintain a longer time between maintenance and increases product life.

# Cut-in Function

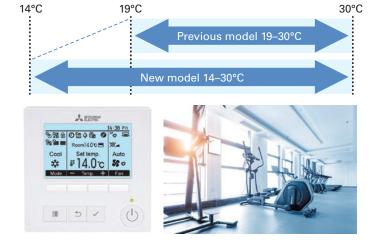

If the actual room temperature greatly differs from the set temperature and two-refrigerant air conditioning system is insufficient, the standby unit starts operation to provide support.

# Extended cooling set temperature range\*

In environments such as gyms where people do strenuous exercise, even if the room is cooled to an appropriate temperature, people may feel that it is hot, and they need a cooler air. To satisfy such demands, we have extended the lower limit of the cooling set temperature range from 19-30°C. to 14-30°C.

- \*Insulation kit (PAC-SK36HK-E) is required when indoor unit is PLA series.
  \*Availability of this function is depending on outdoor unit, indoor unit and remote controller

# Display of model names and serial numbers\*

The model names and serial numbers of the indoor/outdoor units that are connected to the MA smart remote controller can be automatically acquired and displayed through one simple operation. This eliminates the need to directly check each unit and helps with inquiries in the case of an abnormality.

\*Availability of this function is depending on outdoor unit, indoor unit and remote controller.

Collect model names and S/N Model name display 0 OU PUZ-ZM200YKA2 IU1 PLA-ZM50EA2 (example) IU2 PLA-ZM50EA2 IU3 PLA-ZM50EA2 IU4 PLA-ZM50EA2 Collect data: 🗸 -Address + Serial number display 0 OU 1ZU00001 (example) IU1 1ZA00001

Collect model names and S/N IU2 1ZA00002 IU3 1ZA00003 IU4 1ZA00004 Collect data: 🗸 −Address ± Model

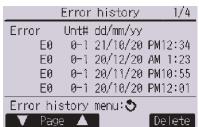

S/N

# Preliminary error history\*

In addition to error history, the history of preliminary abnormalities can be displayed. The feature enables the unit status check during inspection and maintenance.

\*Availability of this function is depending on outdoor unit, indoor unit and remote controller.

### ●Error history (Sample)

### Preliminary error history (Sample)

# Improved defrosting performance\*

\*Availability of this function is depending on outdoor unit, indoor unit and remote controller.

# Avoiding Simultaneous Defrosting

When each of multiple units is in operation for heating in the same space, these may start defrosting at the same time, resulting in a drop in the room temperature. Therefore, we have developed a new function that controls up to four-refrigerant air conditioning system to avoid simultaneous defrosting. By ensuring that defrosting is only performed by one unit at a time, it is possible to minimize any decrease in room temperature.

# Example System Configuration Four sets controlled by a single remote controller

### ■When All Sets Are Controlled Together

### Defrosting When People Are Absent

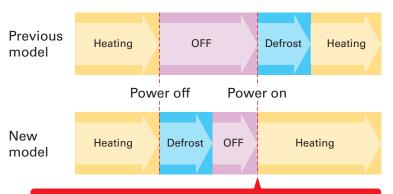

The use of the 3D i-see sensor allows a more comfortable defrosting schedule. After a large amount of frost has built up, the system will switch to defrosting when the 3D i-see sensor detects that no people are present. By minimizing defrosting while people are in the room, there is a much lower chance of a temperature drop while the room is occupied.

\* Only compatible with 4-way cassette and 2x2 cassette models with an attached 3D i-see sensor panel. Even though people are present in the room, the defrosting process may start if all defrosting conditions are met.

# Defrosting When Operation is Stopped

It takes a long time to start operation if there is an excess build-up of frost. Therefore, each unit is equipped with a control system where defrosting is performed immediately after operation is stopped when there is a large amount of frost. This allows heating to be quickly started the next day.

The power turns off after defrosting is complete and the system will start up smoothly the next time it is used.

# Easier M-NET Adapter Installation

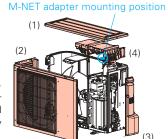

The optional M-NET adapter, which allows centralized control (M-NET control), is now easier to install. The redesigned mounting position significantly reduces the time and effort for installation.

Conventional Model

PAC-SJ96MA-E

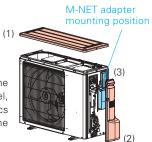

Removed parts

The (1) top panel, (2) front panel, (3) service panel, and (4) electronics box need to be removed, and the connector must be temporarily unplugged.

There is no need to remove the (1) top panel, (2) service panel, (3) service plate, electronics box, nor temporarily unplug the connector.

# Improved chargeless piping length ZM100/125/140

PUZ-ZM100/125/140V(Y)KA used to have a chargeless pipe length of 30 m. However, starting with the V(Y)KA2 model, this has been extended to 40 m. This allows it to be used for a wider range of applications without the need for additional charging of refrigerant.

|                   | Maximum piping length | Chargeless piping length |
|-------------------|-----------------------|--------------------------|
| PUZ-ZM 100V (Y)KA | 100m                  | 30m                      |
| PUZ-ZM 125V (Y)KA | 100m                  | 30m                      |
| PUZ-ZM 140V (Y)KA | 100m                  | 30m                      |

|   |                    | Maximum piping length | Chargeless piping length |
|---|--------------------|-----------------------|--------------------------|
| • | PUZ-ZM 100V (Y)KA2 | 100m                  | 40m                      |
| • | PUZ-ZM 125V (Y)KA2 | 100m                  | 40m                      |
| • | PUZ-ZM 140V (Y)KA2 | 100m                  | 40m                      |

# **Utilizing IoT for Improved Convenience\***

\*Availability of IoT functions are depending on MELCloud version.

By connecting to a MAC-587IF-E Wi-Fi interface, it is possible to collect data and perform air conditioning control via MELCloud. In addition to basic functions such as turning the power on/off and setting the temperature, it is also possible to acquire data used for maintenance and inspection such as model names, serial numbers, and operation data.

# [Basic Operation Functions]

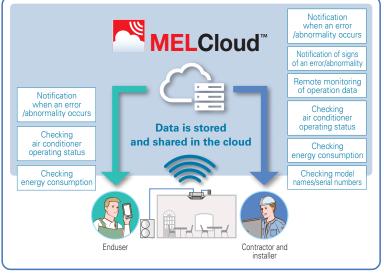

- Operation on/off
- Temperature setting
- Operation mode
- Airflow speed
- •Airflow direction etc...

# [Data Collection and Display]

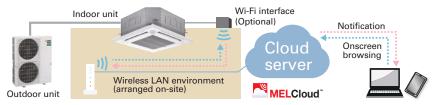

- Model name display
- Serial number display
- Collection of operation data
- Energy consumption display etc...

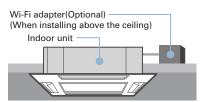

# **MELCloud System Configuration**

# Wi-Fi Adapter (Optional) Installation

# On-Site Installation and Configuration

Wireless LAN adapter installation Connect the wireless LAN adapter to the indoor unit PCB and install it above the ceiling.

Wireless LAN adapter and router connection settings Wireless LAN adapter and server connection settings

## Collection of operation data

All the operation data required for maintenance and inspection can be collected in a simple step. This data can then be easily checked via MELcloud. This makes it easy to check the operating status data even in cases when it is difficult to do a visual inspection. This allows you to quickly identify any system malfunctions. This function also helps to improve the quality of installation work and shortening the time required for maintenance and inspection. This operation

### Operation data that can be collected (example)

- ●Compressor frequency ●Compressor operating current ●Outdoor discharge temperature
- ●Outdoor heat exchanger temperature ●Outdoor air temperature ●Compressor shell temperature
- ●Sub cool ●Discharge superheat ●Indoor inlet temperature ●Indoor heat exchanger temperature
- ●Total compressor operating time●Compressor operation count ●Indoor filter operating time

# Demand control

It is possible to control air-conditioners to appropriately operate according to the energy supply-demand adjustment by electric power companies and each electricity rate plan of end users.

e.g. <Peak cut control> It is possible to utilize an external demand signal to reduce power consumption during peak hours. By satisfying the need for reducing peak power consumption or shifting consumption to a non-peak period, we have increased the range of options for our customers.

### Notification of potential abnormality

The comprehensive analysis of operating data allows the early detection of abnormalities in small functional parts by alerting the operator of any signs of abnormal behaviour. The recognition in advance of abnormalities in each unit further improves the ease of servicing and maintenance. Since this allows a countermeasure to be implemented before the abnormality requires the unit to be completely shut down, it is an effective method for maintaining the unit in its optimum condition.

### [AbnormalitiesThat HaveTheir Signs Monitored]

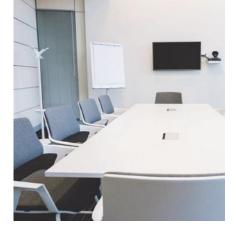

- ●Filter blockage ●Drain blockage ●Refrigerant leakage
- Heat exchanger blockage etc...

# Light weight and compact size

Compact design fits into narrow outdoor unit space of condominiums and offices. Light weight design facilitates easy installation.

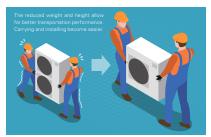

### Unobstructive, compact, and easy to hide from view

Conventional outdoor units may spoil the view. Due to its compact size, the new model can be installed in locations that previous model is not suitable.

### Easy transportation and installation

Transport efficiency improves thanks to its low height. The unit can even be transported by minivan.

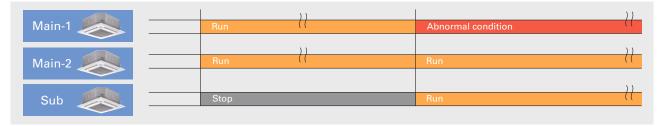

# 2+1 Back-up rotation\*

The use of a three-refrigerant air conditioning system enables you to utilize the back-up, rotation, and cut-in functions. This allows you to implement effective risk management for added peace of mind.

\*Availability of this function is depending on outdoor unit, indoor unit and remote controller.

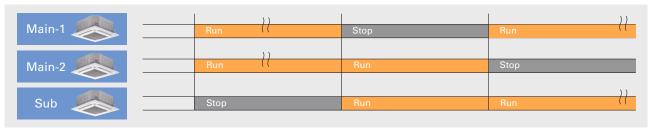

# **Back-up Function**

In the unlikely event that one of the units stops operation due to an abnormality, the standby unit immediately starts back-up operation. The comprehensive analysis of operating data allows the early detection of abnormalities in small functional parts by alerting the operator of any signs of abnormal behaviour. The recognition in advance of abnormalities in each unit further improves the ease of servicing and maintenance. Since this allows a countermeasure to be implemented before the abnormality requires the unit to be completely shut down, it is an effective method for maintaining the unit in its optimum condition.

## [AbnormalitiesThat HaveTheir Signs Monitored]

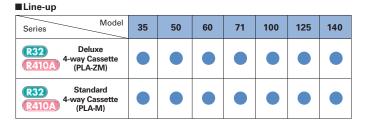

- ●Filter blockage ●Drain blockage ●Refrigerant leakage
- Heat exchanger blockage etc...

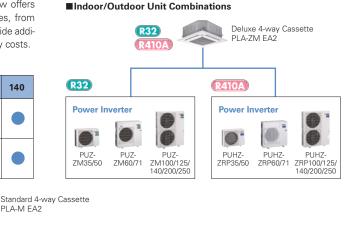

# Deluxe 4-way Cassette Line-up

For users seeking even further energy savings, Mitsubishi Electric now offers deluxe units (PLA-ZM) to complete the line-up of models in this series, from 35-140. Compared to the standard models (PLA-M), deluxe models provide additional energy savings, contributing to a significant reduction in electricity costs.

**R32** 

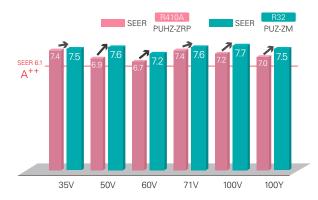

PLA-M EA2

# Industry-leading energy efficiency

Introduction of new R32 refrigerant realises improved cooling efficiency. Rating of more than 7.0 achieved for all capacity range. Introduction of new R32 refrigerant reduces energy consumption and realises energy savings.

# Horizontal Airflow

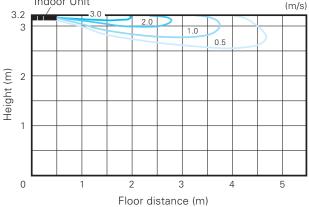

The new airflow control removes that uncomfortable drafty feeling with the introduction of a horizontal airflow that spreads across the

ceiling. The ideal airflow for offices and restaurants.

[Horizontal airflow]

Model name: PLA-ZM140EA2 Ceiling height: 3.2m Mode: Cooling Indoor Unit 3.2

# Automatic Grille Lowering Function (PLP-6EAJ, PLP-6EAJE)\*

An automatic grille lowering function is available for easy filter maintenance. Special wired and wireless remote controllers can be used to lower the intake grille for maintenance.

\*Auto elevation panel(PLP-6EAJ, PLP-6EAJE) cannot be used with Plasma Quad Connect(PAC-SK51FT-E) and Insulation kit (PAC-SK36HK-E).

Grille Elevation Remote Controller (comes with the automatic elevation panel)

Wired Remote Controller

Wireless Remote Controller

# **Easy Installation**

### Electrical box wiring

After reviewing the power supply terminal position in the electrical box, the structure was redesigned to improve connectivity. This has made previously complex wiring work easier.

Previous model (B Series

New model (E Series)

### Increased space for plumbing work

The top and bottom positions of the liquid and gas pipes have been reversed to allow the gas pipe work, which requires more effort, to be completed first. Further, through structural innovations related to the space around the pipes, the area where the spanner can be moved has been increased, thus improving liquid pipe work and enabling it to be completed smoothly.

■ Previous model (B Series)

■ New model (E Series)

### Temporary hanging hook

The structure of the panel has been revised and is now equipped with a temporary hanging hook. This has improved work efficiency during panel installation.

# No need to remove screws

Installation is possible without removing the screws for the corner panel and the control box, simply loosen them. This lowers the risk of losing screws.

■ Corner panel

■ Control box cover

### Lightweight decorative panel

After reviewing the structure and materials, weight has been reduced approximately 20% compared to the previous model, reducing the burden of installation.

# 3D Fsee Sensor for S & P SERIES

# Detects number of people

3D i-see Sensor detects the number of people in the room and sets the air-conditioning power accordingly. This makes automatic power-saving operation possible in places where the number of people entering and exiting is large. Additionally, when the area is continuously unoccupied, the system switches to a more enhanced power-saving mode. Depending on the setting, it will save additional capacity or stop operation altogether.

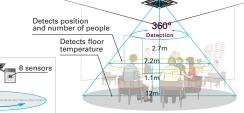

# Detects people's position

Once the position of a person is detected, the duct angle of the vane is automatically adjusted in that direction. Each vane can be independently set to "block wind" or "not block wind" according to taste.

Detects number of people

Floor surface \*In case of a 2.7m ceiling

# Detects number of people (3D i-see Sensor)

# Room occupancy energy-saving mode

The 3D i-see Sensor detects the number of people in the room. It then calculates the occupancy rate based on the maximum number of people in the room up to that point in time in order to save air-conditioning power. When the occupancy rate is approximately 30%, air-conditioning power equivalent to 1°C during both cooling and heating operation is saved. The temperature is controlled according to the number of people.

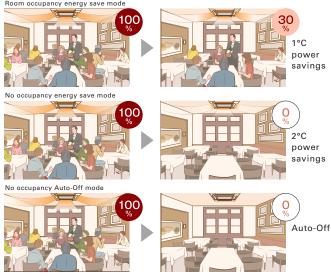

# No occupancy energy-saving mode

When 3D i-see Sensor detects that no one is in the room, the system is switched to a pre-set power-saving mode. If the room remains unoccupied for more than 60min, air-conditioning power equivalent to 2°C during both cooling and heating operation is saved. This contributes to preventing waste in terms of heating and cooling.

# No occupancy Auto-OFF mode\*

When the room remains unoccupied for a pre-set period of time, the air conditioner turns off automatically, thereby providing even greater power savings. The time until operation is stopped can be set in intervals of 10min, ranging from 60 to 180 min.

\*When MA Remote Controller is used to control multiple refrigerant systems "No occupancy Auto-OFF mode" cannot be used.

\*PAR-41MAA is required for each setting

# Detects people's position (3D i-see Sensor)

# Direct/Indirect settings\*

Some people do not like the feel of wind, some want to be warm from head to toe. People's likes and dislikes vary. With the 3D i-see Sensor, it is possible to choose to block or not block to the wind for each vane.

\*PAR-41MAA or PAR-SL101A-E is required for each setting.

# Seasonal airflow\*

### <When cooling>

Saves energy while keeping a comfortable effective temperature by automatically switching between ventilation and cooling. When a pre-set temperature is reached, the air conditioning unit switches to swing fan operation to maintain the effective temperature. This clever function contributes to keeping a comfortable coolness.

### <When heating>

The air conditioning unit automatically switches between circulator and heating. Wasted heat that accumulates near the ceiling is reused via circulation. When a pre-set temperature is reached the air conditioner switches from heating to circulator and blows air in the horizontal direction. It pushes down the warm air that has gathered near the ceiling to people's height, thereby providing smart heating.

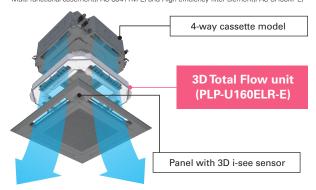

\*PAR-41MAA is required for each setting.

# 3D Total Flow\*

3D Total Flow is an innovative function. Our original 3D i-see sensor detects the temperature of the floor, and then the newly installed 3D Total Flow unit automatically controls the airflow in the left/right directions in a smart manner.

\*3D Total Flow unit(PLP-U160ELR-E) cannot be used with Plasma Quad Connect(PAC-SK51FT-E), Insulation kit(PAC-SK36HK-E), Shutter Plate(PAC-SJ37SP-E), Multi functional casement(PAC-SJ41TM-E) and High-efficiency filter element(PAC-SH59KF-E)

# Horizontal louver (3DTotal Flow)

In addition to the ability of conventional models to control airflow in the vertical direction, the adoption of a horizontal louver unit allows each outlet to blow air over a horizontal angle of 90 degrees. The combination of four outlets delivers 360° airflow control around the entire circumference. This now makes it possible to blow air in diagonal directions which eliminates temperature irregularities.

# Fine-tuned sensing & airflow direction control (3D Total Flow)

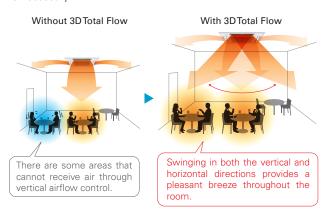

# Swinging

Since airflow can be controlled in the horizontal and vertical directions, you can efficiently make the entire room comfortable.

# Horizontal, vertical, and diagonal airflow delivered to every corner

The combination of the vertical vanes with the horizontal louver unit makes it possible to direct airflow in any direction. This quickly makes the entire room comfortable, even when diagonal airflow is necessary.

### Indirect mode

When set to "Indirect" mode, the system detects the position of a person and maintains comfort while diverting airflow away from them.

# Prevents direct airflow and keeps you comfortable

This function prevents people from being directly exposed to airflow while still ensuring comfort. The "Indirect" mode of 3D Total Flow keeps the downward airflow while avoiding direct blow to people, delivering a pleasant warmth.

### Without 3D Total Flow

Models that are only equipped with vertical vanes need to swing the airflow upward to avoid people. This makes it difficult to warm up the surrounding space.

### With 3DTotal Flow

Now, it is easier to warm the surrounding space while still ensuring people do not receive direct blow.

\*If people are present throughout the entire airflow range of an outlet, the airflow is shifted horizontally to avoid direct airflow.

# Targeting

The system can detect spaces with uneven temperatures and target them by sending air even if they are in a diagonal direction.

### Detects and targets areas with uneven temperatures

3D i-see sensor detects areas with uneven temperatures, even if they are caused by the installation orientation of the air conditioner or the influence of strong sunlight. Efficient air conditioning is possible thanks to the ability to send focused airflow to such areas, even those in a diagonal position.

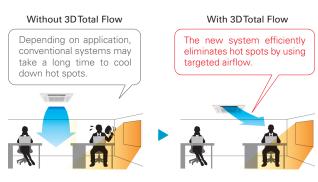

### Direct mode

When set to "Direct" mode, the system detects the position and diverts airflow towards wherever they are located.

### Delivers airflow even in diagonal directions

You can freely turn on "Direct" mode depending on personal prefereuce. This allows for air conditioning in diagonal directions which was difficult for models that could only swing the airflow up and down. This feature is perfect for when you come back home on a hot day.

Without 3DTotal Flow

# With 3DTotal Flow

Ensures comfort even when you are located diagonally from an outlet.

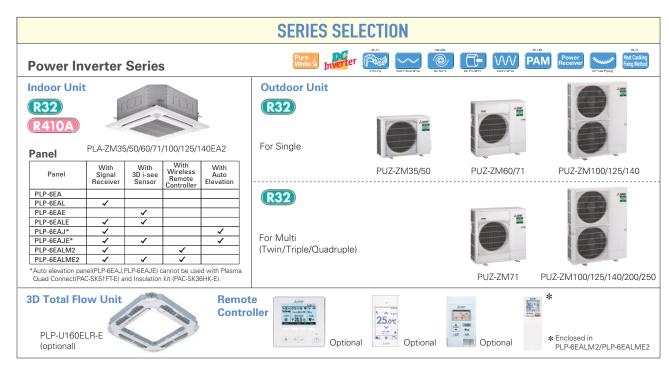

The optional Plasma Quad Connect PAC-SK51FT-E can be installed on the indoor units.

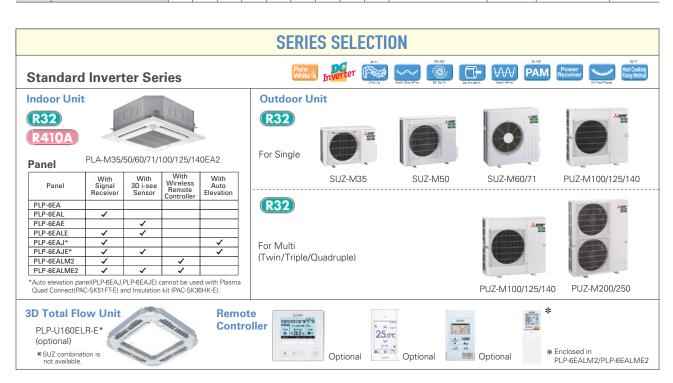

\*Plasma Quad Connect(PAC-SK51FTE) cannot be used with PLP-U160ELR-E(3D Total Flow unit), Insulation kit (PAC-SK36HK-E), Auto elevation panel(PLP-6EAJ, PLP-6EAJE), Multi functional casement(PAC-SJ41TM-E) and High-efficiency filter element(PAC-SH59KF-E).

### PLA-ZM EA2 Indoor Unit Combinations Indoor unit combinations shown below are possible.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the producy ourself and always ask a professional. The GWP of R32 is 675 in the IPCC 4th Assessment Report.
\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.
\*3 Optional air protection guide is required where ambient temperature is lower than -5°C.
\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No208/2012.
\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

Heating \*1 Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant mith higher GWP, if leaked to the atmosphere, This or a politic contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R32 is 675 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than –5°C.

\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or diassessmelbe the product yourself and always ask a professional. The GWP of R32 is 675 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than -5°C.

\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

### PLA-ZM EA2 Indoor Unit Combinations Indoor unit combinations shown below are possible.

Integrant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R410A is 2088 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than –5°C. \*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This impelance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R410A is 2088 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than -5°C.

\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R410A is 2088 in the IPCC 4th Assessment Report.
\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.
\*3 Optional air protection guide is required where ambient temperature is lower than -5°C.
\*4 SEER and SCOP are based on 2009/12/6FC.Energy-related Products Directive and Regulation(EU) No206/2012.
\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

<sup>93</sup> 

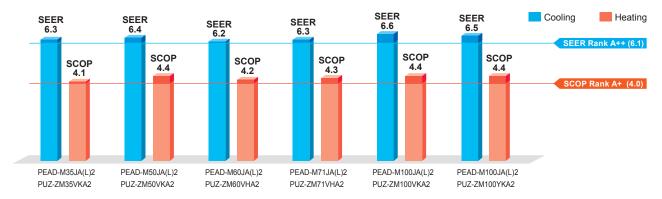

Energy efficiency has been improved. A reduced electricity consumption contributes to a further reduction in operating cost. The thin body with a wide-ranged external static pressure of this series is the perfect answer for the air conditioning needs of buildings with minimum ceiling installation space.

# ErP Lot-10 compliant, Achieving High Energy Efficiency

The shape of fan wing and casing is improved to provide more smooth air flow, increasing the operation efficiency. All models under 12kW(M35~M100) are complied with ErP Lot 10 and energy rankings of A++ for cooling and A+ for heating. This contributes to a reduction in the cost of annual electricity.

# **Compact Indoor Units**

The height of the models from 35-140 has been unified to 250 mm, which makes installation in low ceiling with minimal clearance space possible.

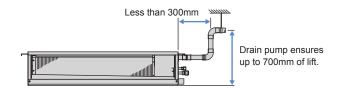

# Selectable Static Pressure Levels

External static pressure conversion can be set up to five levels. Capable of being set to a maximum of 150 Pa, units are applicable to a wide range of building types.

# Drain Pump is Optionally Selectable

The line-up consists of two types: models with or without a built-in drain pump, thus allowing more freedom in piping design.

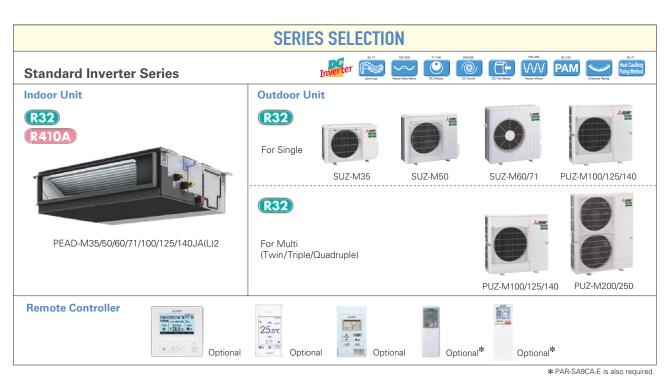

# Connectable to Plasma Quad Connect

The optional Plasma Quad Connect MAC-100FT-E can be installed on the indoor unit's air inlet side. For installation, PQ attachment or PQ box is required.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the producy ourself and always ask a professional. The GWP of R32 is 676 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than -5°C. \*4 EER/COP and SEER/SCOP for M35-71 are measured at ESP 35Pa, for M100 at ESP 37Pa, for M125/140 at ESP 50Pa.

\*5 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*6 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

\*7 The factory setting of ESP is shown without < >.

| *1 Refrige | rant leakage contributes to clim | nate change. Refrigerant with low | er alahs    | al warming note   | ntial (G\A/P) w/ | ould contribute | lace to alphal s | warming than a           | refrigerant wit          | th higher GM/P  | if leaked to the         | atmoenhara "    | This appliance           |

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming optomial (GWP) would contribute less to global warming than a refrigerant with lower global warming optomial (GWP) would contribute less to global warming than a refrigerant with lower global warming optomial (GWP) would contribute less to global warming than a refrigerant with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R410A is 2088 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than –5°C. \*4 EER/COP and SEER/SCOP for M35-71 are measured at ESP 35Pa, for M100 at ESP 37Pa, for M125/140 at ESP 50Pa.

\*5 SEER and SCOP are based on 2009/125/EC-Energy-related Products Directive and Regulation(EU) No206/2012.

\*6 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R32 is 675 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than –5°C. \*4 EER/COP and SEER/SCOP for M35-71 are measured at ESP 35Pa, for M100 at ESP 37Pa, for M125/140 at ESP 50Pa.

\*5 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*6 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

\*7 The factory setting of ESP is shown without < >.

# PEA

The PEA series is a large capacity ceiling-concealed type indoor units which are visually discreet blending into various environments. The PEA model realizes improved energy efficiency with a patented fan called Turbo In Sirocco fan. A wider option of external static pressure up to 250Pa allows authentic ducted air-conditioning with an elegant interior layout. In addition, the PEA series has a separated structure that enables delivery into a narrow space.

PEA-M200/250LA2

The separated structure increases the efficiency of delivery into a narrow space.

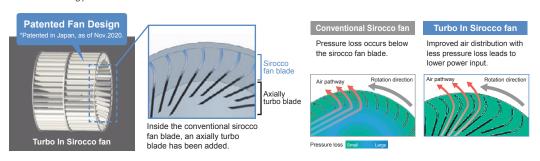

# Improved Energy Efficiency

R32 refrigerant with designed fan reduces energy consumption and have resulted in higher energy savings for all capacity ranges.

# Low input with Fan Design

The PEA series applies a designed fan; a Turbo In Sirocco fan which realizes high efficiency with a lower power input. The design is Mitsubishi Electric's patented technology with a combination of turbo fan inside the sirocco fan.

# Wide range of external static pressure allows flexible duct design

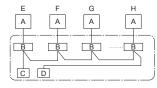

250Pa setting is newly added enabling total of five static pressure level. The ability to select additional static pressure enables long duct and more freedom in design.

The factory setting of external static pressure is shown without brackets (< >). Refer to "Fan characteristics curves" according to the external static pressure, in the DATA BOOK for the usable range of airflow rate

# PAR-41MAA Group Control

The PAR-41MAA remote controller can control up to 16 systems as a group, and is ideal for supporting the integrated management of building air conditioners.

- Indoor unit Main remote controller
- Main remote controller
  Subordinate remote controller
  Standard (Refrigerant address = 00)
  Refrigerant address = 01
  Refrigerant address = 02
  Refrigerant address = 15

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.
\*2 Optional air protection guide is required where ambient temperature is lower than 5°C.
\*3 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

# New Design (M35-50)

PKA

air conditioning needs.

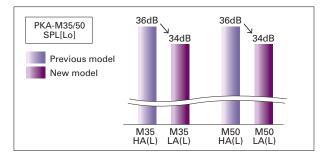

A sharp and simple form that combines beauty and function. The simple square design harmonizes beautifully with the straight lines created by the intersection of the walls, floor and ceiling of the space, leading to a better quality of space. Also adopted a new white body color. It will make your life and space beautiful and comfortable without disturbing the atmosphere of the room. In addition, we realized miniaturization of conventional model. It contributes to space saving of installation area and giving room to room space.

# Quietness (M35-50)

The noise level has been significantly reduced compared to the conventional model by reviewing the unit structure and improving the line flow fan.

# New Wireless Remote Controller Included

The PKA-KAL2 series wireless remote controller has been updated. It now comes with a new stylish remote controller that fits comfortably in your hand and has a wide range of useful functions.

### Main Functions of new Wireless Remote Controller

- ·Weekly Timer
- Backlight
- ·Dual set point
- · Battery replacement sign

# ErP Lot 10 Compliant with High Energy-efficiency Achieving SEER/SCOP Rank A, A+ and A++

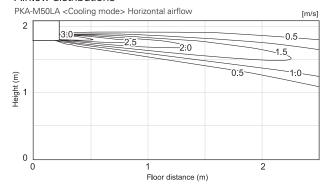

Highly efficient indoor unit heat exchangers and and newly designed power inverters (PUHZ-ZM) contribute to an amazing reduction in electricity consumption throughout a year, and have resulted in models in the full-capacity range attaining the rank A, A+ and A++ energy savings rating.

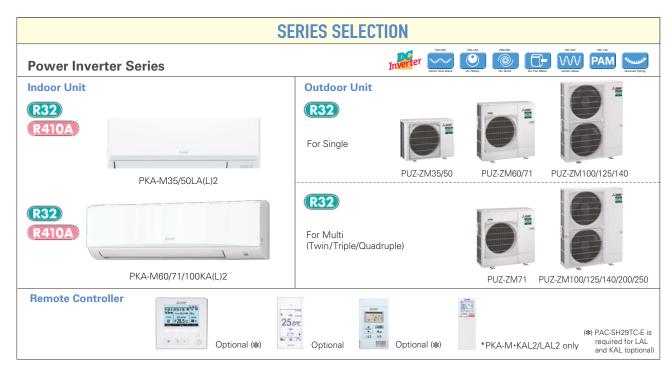

# Airflow Control – Horizontal Airflow – (M35-50)

Significantly improved airflow control to achieve horizontal airflow. This reduces the feeling of draft even on a wall-mounted model, and air conditioning the indoor space firmly.

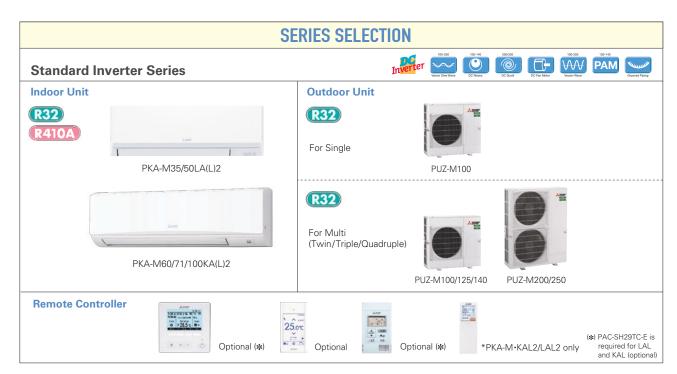

# Airflow distributions

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R32 is 675 in the IPCC 4th Assessment Report.
\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.
\*3 Optional air protection guide is required where ambient temperature is lower than -5°C. \*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.
\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

Heating °C -15 ~ +21 -15 ~ +21 \*1 Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP; if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R32 is 675 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than -5°C.

\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

<sup>\*\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R32 is 675 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than –5°C. \*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

| Guarantee   | ed Operating Range (Outdoor)                     | Cooling(*3)                     | °C       | -15 ~ +46  | -15 ~ +46          |

Heating °C -15 ~ +21 -15 ~ +21 \*1 Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R32 is 675 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than -5°C.

\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

PCA-M35/50/60/71/100/125/140KA2
oth high- and low-ceiling reptional energy-saving conditioning needs.

A stylish new indoor unit design and airflow settings for both high- and low-ceiling interiors expand installation possibilities. Together with exceptional energy-saving performance, these units are the solution to diversified air conditioning needs.

# Stylish Indoor Unit Design

A stylish square-like design is adopted for the indoor units of all models. As a result, the units blend in better with the ceiling.

PCA-KA

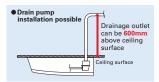

# ErP Lot 10 Compliant with High Energy-efficiency Achieving SEER/SCOP Rank A, A+ and A++

A direct-current (DC) fan motor is isntalled in the indoor unit, increasing the seasonal energy efficiency of newly designed Power Inverter series (PUHZ-ZM) and resulting in the full capacity models comply ErP Lot 10 with energy ranking A+/A++ for cooling and A/A+ for heating. This contribute to an impressive reduction in the cost of annual electricity.

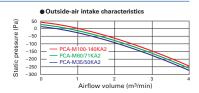

# Optional Drain Pump for Full-capacity Models

The pumping height of the optional drain pump has been increased from 400mm to 600mm, expanding flexibility in choosing unit location during installation work.

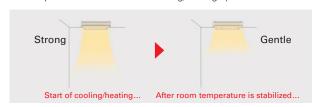

# Outside-air Intake

Units are equipped with a knock-out hole that enables the induction of fresh outside-air.

# Equipped with Automatic Air-speed Adjustment

In addition to the conventional 4-speed setting, units are now equipped with an automatic air-speed adjustment mode. This setting automatically adjusts the air-speed to conditions that match the room environment. At the start of heating/cooling operation, the airflow is set to high-speed to quickly heat/cool the room. When the room temperature reaches the desired setting, the airflow speed is decreased automatically for stable comfortable heating/cooling operation.

# Equipped with High-/Low-ceiling Modes

Units are equipped with high- and low-ceiling operation modes that make it possible to switch the airflow volume to match room height. The ability to choose the optimum airflow volume makes it possible to optimize the breezy sensation felt throughout the room.

|  |                                   | ate change. Refrigerant with low |                 |              |                   |                   |                   |                |                    |               | if leaked to the   | atmosphere.   | This appliance |

<sup>\*1</sup> Retrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO2, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R32 is 675 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than -5°C. \*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R32 is 675 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than -5°C.

\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

#### Tough on Oily Smoke

A durable stainless steel casing that is resistant to oil and grease is provided to protect the surface of the body. Grimy dirt and stains are removed easily, enabling the unit to be kept clean at all times.

#### High-performance Oil Mist Filter

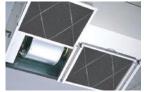

A high-performance heavy-duty oil mist filter is included as standard equipment. The filtering system is more efficient than conventional filters, thereby effectively reducing the oily smoke entering the air conditioner. The filter is disposable, thereby enabling trouble-free cleaning and maintenance.

#### Oil Mist Filter Cleaning

When used in kitchens, the oil mist filter should be replaced once every two months. The system comes with 12 filters elements. After these have been used, optional elements (PAC-SG38KF-E) can be purchased.

Pull the handle to easily slide the filter out

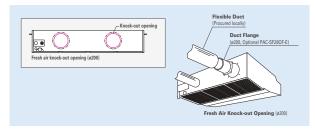

#### Easy Maintenance – Even for Cleaning the Fan

A separate fan casing that can be disassembled in sections is adopted to ensure easy fan cleaning. Drain pan cleaning onsite is also no problem owing to the use of a pipe connector that is easily removed.

#### Fresh Outside-air Intake (Option)

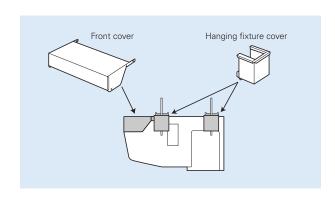

There is a knock-out opening on the rear panel of the unit that can be used to bring fresh air into the unit. This helps to improve ventilation and make the kitchen comfortable.

Notes: 1) A fresh-air duct flange is required (sold separately) 2) Intake air is not 100% fresh (outside) air.

#### Cosmetic Front and Hanging Fixture Covers (Option)

Cosmetic covers are available to prevent the collection of dust and grime on the main body and hanging fixture sections.

\* PAR-SA9CA is also required.

#### PCA-M HA Indoor Unit Combinations Indoor unit combinations shown below are possible.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R410A is 2088 in the IPCC 4th Assessment Report.
\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.
\*3 Optional air protection guide is required where ambient temperature is lower than –5°C.
\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.
\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

<sup>\*\*</sup>Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO2, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R410A is 2088 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than –5°C.

\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

of functions.

Installation of this floor-standing series is easy and quick. An excellent choice when there is a sudden need for an air conditioner to be installed.

#### A slim design the fits neatly into any space

With a width of only 600mm, this slim unit can fit neatly into narrow spaces.

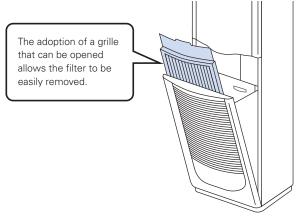

Built-in MA smart remote controller

The large and easy-to-read LCD makes it easy to perform a variety

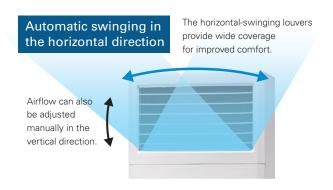

#### Equipped with a long-life filter as standard

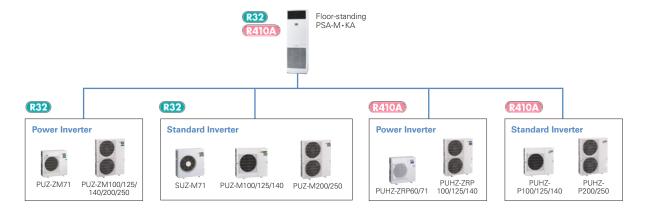

#### A wide airflow range with horizontal swinging

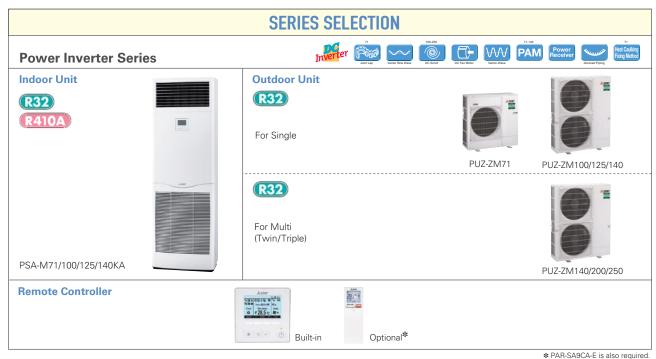

The horizontal swinging function can be turned on or off via the remote controller to deliver comfort over a wider area.

#### Floor-standing Line-up

The PSA series was previously only able to be connected to P series outdoor units. However, it can now also be connected to S series outdoor units. This wider lineup provides our customers with a more flexible range of options.

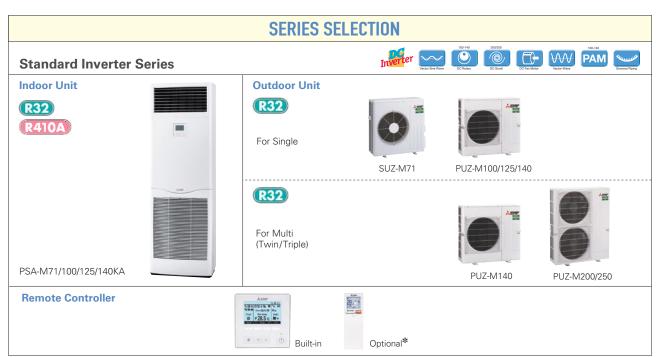

PSA-M Indoor Unit Combinations Indoor unit combinations shown below are possible.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R410A is 2088 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than -5°C. \*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with ligher GWP, it leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R410A is 2088 in the IPCC 4th Assessment Report.

\*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

\*3 Optional air protection guide is required where ambient temperature is lower than –5°C.

\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

\*5 Joint pipe is required depending on installed refrigerant pipes, outdoor units and indoor units.

# MULT SPLISSERIES

#### **SELECTION**

Choose from types of indoor units and outdoor units that can run up to six indoor units each. Create the system that best matches room shapes and number of rooms.

# Check Indoor Units Refer to the "Indoor Unit Compatibility Table" to check if the indoor units selected can be used with the outdoor unit selected. (Indoor units not listed in the table cannot be used.) Check Indoor Unit Capacity Combination Refer to the "Combination Table" to check if the capacity combination of the indoor unit selected is connectable. (Combinations not listed cannot be connected.) If the desired combination cannot be found, please change either the indoor or outdoor unit to match one of the combinations shown in the tables.

# MXZ SERIES

Advancements in the MXZ Series include efficiency and flexibility in system expansion capabilities. The best solution when requiring multi-system air conditioning needs.

MXZ-2F33VF4 MXZ-2F42VF4 MXZ-2F53VF(H)4

2-port

3-port 4-port MXZ-3F54VF4 MXZ-3F68VF4 MXZ-4F72VF4

4-port 5-port MXZ-4F83VF2 MXZ-5F102VF2

R32

MXZ-6F120VF2

#### Units can be used even if it is connected to only one indoor unit (4F83/5F102/6F120)

This unit can be used even if it is connected to only one indoor unit. This offers more flexibility for wide range of application that satisfies various customers' demand.

#### No necessity for refrigerant charging

Depending on the pipe length and the indoor units that are connected, conventional models have required refrigerant charging, but no R32 MXZ model needs to be charged with additional refrigerant. This eliminates troublesome work at the site of installation, and reduces the amount of additional work for the installer.

#### Handle Up to 6 Rooms with a Single Outdoor Unit

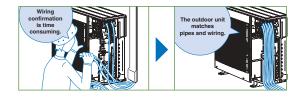

The MXZ Series for R32 offers a ten-system line-up to choose from, ranging between 3.3 and 12.0kW. All of them are compatible with specific M, S and P series indoor units. A single outdoor unit can handle a wide range of building layouts.

#### Support Functions

#### Wiring/Piping Correction Function\* (3F54/3F68/4F72/4F80/4F83/5F102/6F120)

Simply press a single button to confirm if wiring and piping are properly connected. Wiring errors are corrected automatically when discovered. This eliminates the need to confirm complicated wiring connections when expanding the system. (For details, refer to the outdoor unit installation manual.)

\* Function cannot be used when the outdoor temperature is below  $0^{\circ}$ C. The correction process requires 10-20 minutes to complete and must be conducted with the unit set to the "Cooling" mode.

#### **Operation Lock**

To accommodate specific use applications, cooling or heating operation can be specified when setting the control board of the outdoor unit. A convenient option when a system needs to be configured for exclusive cooling or heating service. (For details, refer to the outdoor unit installation manual.)

\*\*1 Energy consumption based on standard test results.

Actual energy consumption will depend on how the appliance is used and where it is located.

\*\*2 If the outdoor unit is installed higher than the indoor unit, max. height is reduced to 10 m.

\*\*3 SEER/SCOP values and energy efficiency class are measured when connected to the indoor units listed below.

# MXZ SERIES

Advancements in the MXZ Series include efficiency and flexibility in system expansion capabilities. The best solution when requiring multi-system air conditioning needs.

#### Handle Up to 6 Rooms with a Single Outdoor Unit

The MXZ Series offers a nine-system line-up to choose from, ranging between 3.3 and 12.2kW. All of them are compatible with specific M, S and P series indoor units. A single outdoor unit can handle a wide range of building layouts.

#### Support Functions -

#### Wiring/Piping Correction Function\* (3E54/3E68/4E72/4E83/5E102/6D122)

Simply press a single button to confirm if wiring and piping are properly connected. Wiring errors are corrected automatically when discovered. This eliminates the need to confirm complicated wiring connections when expanding the system. (For details, refer to the outdoor unit installation manual.)

\*Function cannot be used when the outdoor temperature is below 0°C.

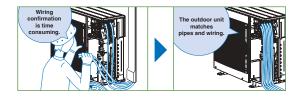

The correction process requires 10–20 minutes to complete and must be conducted with the unit set to the "Cooling" mode.

#### Ampere Limit Adjustment\*

(4E83/5E102/6D122)

Dipswitch settings can be used to adjust the maximum electrical current for operation. This function is highly recommended for managing energy costs. (For details, refer to the outdoor unit installation manual.)

\* Maximum capacity is lowered with the use of this function.

#### **Operation Lock**

To accommodate specific use applications, cooling or heating operation can be specified when setting the control board of the outdoor unit. A convenient option when a system needs to be configured for exclusive cooling or heating service. (For details, refer to the outdoor unit installation manual.)

| 3 units             | 300g additional (Total 3000g) | 300g+{(L-40)m×20g/m)} | 3400g          |

- \*1 Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP; if leaked to the atmosphere. This appliance contains a refrigerant liuli with a GWP equal to 1975. This means that if 1kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1kg of CO₂, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

  \*2 Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

  \*3 If the outdoor unit is installed higher than the indoor unit, max. height is reduced to 10m.

  \*4 EER/COP, EEL rank, SEER/SCOP values and energy efficiency class are measured when connected to the indoor units listed below.

  MX2-2D33VA → MSZ-EF18VE + MSZ-EF18VE
  MX2-2D4VA2 → MSZ-EF18VE + MSZ-EF28VE
  MX2-2D53VA(H)2 → MSZ-EF18VE + MSZ-EF28VE
  MX2-3E54VA → MSZ-EF18VE + MSZ-EF28VE
  MX2-3E54VA → MSZ-EF18VE + MSZ-EF28VE
  MX2-4E72VA → MSZ-EF18VE + MSZ-EF28VE + MSZ-EF18VE
  MX2-4E72VA → MSZ-EF18VE + MSZ-EF28VE + MSZ-EF18VE + MSZ-EF28VE
  MX2-4E83VA → MSZ-EF18VE + MSZ-EF18VE + MSZ-EF28VE + MSZ-EF28VE
  MX2-4E83VA → MSZ-EF18VE + MSZ-EF18VE + MSZ-EF28VE + MSZ-EF2

### MXZ-HA SERIES

Multi-port outdoor units exclusively for MSZ-HR indoor units.

#### Stylish Design with Flat Panel Front

A stylish flat panel design is employed for the front of the indoor unit. The simple look matches room aesthetics.

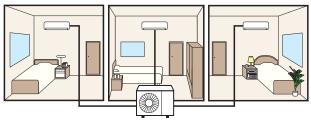

#### Easy to create various combinations

Wide range of simple combinations only possible using multi-port outdoor units.

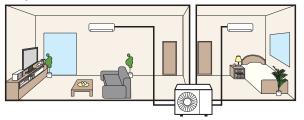

#### Two bedrooms

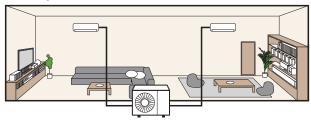

Living room and one bedroom

Wide living room

## PUMY-SP SERIES

Air conditioning system supports replacement work by simplifying the installation process. Ideal for supporting renewal needs at small offices and stores, home offices, etc.

R410A

PUMY-SP112/125/140VKM2 PUMY-SP112/125/140YKM2

#### Light weight and compact size

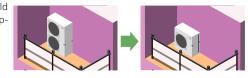

Compact design fits into narrow outdoor unit space of condominiums and offices. Light weight design facilitates easy installation and transportation.

#### Unobstructive, compact, and easy to hide from view

Conventional 2-fan type outdoor units may spoil the view. Due to its compact size, the new outdoor fan unit can be installed in loca-

tions that would have been inappropriate.

#### Easy installation and transportation

The installation location is flexible

thanks to its 30Pa static pressure.

You can install it in locations that you

The reduced weight and height allow for better transportation performance. Carrying and installing become easier.

could not before.

An external static pressure

of 30Pa allows outdoor

unit to be installed on balconies in high-rise building

or spaces near louvers.

#### Industry's top energy efficiency

Even with its compact size and light weight, it has a high EER and COP. Costs are reduced with the industry's best energy saving abilities.

#### Super silent mode\*

Noise level can be reduced up to 10dB(A). This allows you to operate the unit even in the night in a residential zone.

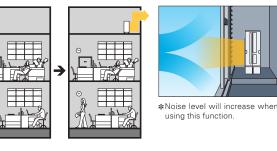

- \*Capacity reduction differs by mode setting.
- \*PAC-SC36NA-E is required to activate Super Silent mode

#### Rear piping is available

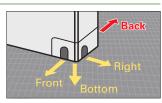

#### Freedom with layout due to its piping pullout locations in four directions

The in-door unit allows piping from any four directions; front, back, bottom, or right. This enables easier horizontal connection for collective layout.

The out-door unit with an expanded piping layout flexibility greatly improves piping workability.

An external static pressure of 30Pa

| Indoor/indoor  | 00             |

\*In case of branch box connection: 12m

<sup>\*</sup>The piping connection size differs according to the type and capacity of outdoor/indoor units.

Match the piping connection size of branch box with outdoor/indoor unit. If the piping connection size of branch box does not match the piping connection size of outdoor/indoor unit, use optional different-diameter (deformed) joints to the branch box side. (Connect deformed joint directly to the branch box side.)

# PUMY-P SERIES

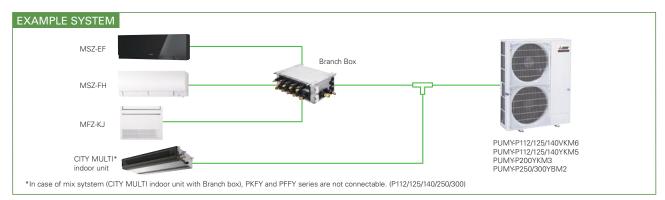

Air conditioning system supports replacement work by simplifying the installation process. Ideal for supporting renewal needs at small offices and stores, home offices, etc.

#### R410A

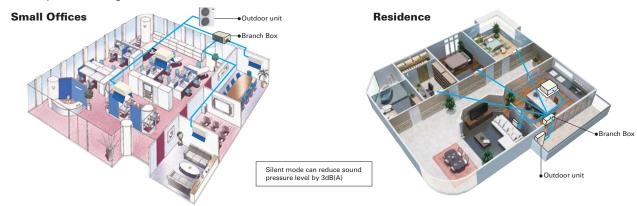

PUMY-P112/125/140VKM6 PUMY-P112/125/140YKM5 PUMY-P200YKM3 PUMY-P250/300YBM2

#### The two-pipe zoned system designed for Heat Pump Operation

PUMY series make use of a two-pipe refrigerant system, which allows for system changeover from cooling to heating, ensuring that a constant indoor climate is maintained in all zones. The compact outdoor unit utilizes R410A refrigerant and an INVERTER-driven compressor to use energy effectively.

With a wide range of indoor unit line-up in connection with a flexible piping system, PUMY series can be configured for all applications. Up to 12 (P250/300: Up to 30) indoor units can be connected with up to 130% connected capacity to maximize engineer's design options. This feature allows easy air conditioning in each area with convenient individual controllers.

<sup>\*1</sup> Include system with connection kit \*2 In case of including PKFY or PFFY, height between units is 30m.

#### 30Pa external static pressure\* Option (requires PAC-SJ71FM-E)

An external static pressure of 30Pa enables the outdoor unit to be installed on balconies in high-rise building or spaces near louvers.

\*1.\*4 Nominal conditions

|         | Indoor            | Outdoor         | Piping Length | Level Difference |
|---------|-------------------|-----------------|---------------|------------------|
| Cooling | 27°C DB / 19°C WB | 35°C            | 7.5m          | 0m               |
| Heating | 20°C DB           | 7°C DB / 6°C WB | 7.5m          | 0m               |

<sup>\*2 10</sup> to 52°C D.B.: When connecting PKFYP10/15/20/25/32VLM, PKFYP15/20/25VBM, PFFYP20/25/32VKM and PFFYP20/25/32VCM, PFFYP20/25/32VLE(R)M, PEFYP-VMA3, M, S and P series indoor unit.

- \*3 When connecting 7 indoor units via branch box, connectable City Multi indoor units are 3; connecting 8 indoor units via branch box, connectable indoor units are 2.

  \*5 t is possible to connect 1 Fresh Air type indoor unit to 1 outdoor unit. (1:1 system)

  \*6 At least 2 indoor units must be connected when using branch box.

  \*7 Liquid pipe diameter: 12.7mm when piping length is more than 60m.

  \*8 Liquid pipe diameter: 12.7mm, when further piping length is longer than 90m, and when PEFYP200 or P250 is connected.

\* The piping connection size differs according to the type and capacity of outdoor/indoor units. Match the piping connection size of branch box with outdoor/indoor unit. If the piping connection size of branch box does not match the piping connection size of outdoor/indoor unit, use optional different-diameter (deformed) joints to the branch box side. (Connect deformed joint directly to the branch box side.)

#### Indoor Unit Compatibility Table

■ MXZ Series R32

Possible combinations of outdoor units and indoor units are shown below.

<sup>\*1</sup> Maximum total current of indoor units: 3A or less.
\*2 SEZ-M25 cannot be connected with MXZ-2F/3F/4F when total capacity of connected indoor units is equivalent to outdoor capacity (capacity ratio is 1).
\*3 MXZ outdoor units are not designed to operate with a single indoor unit with one-to-one piping work. Please install at least two indoor units.
\*4 P series cannot be connected with MXZ-4F83VFHZ2 when ampere limit adjustment function is operated.

#### ■ MXZ Series R410A

Possible combinations of outdoor units and indoor units are shown below.

<sup>\*1</sup> Maximum total current of indoor units: 3A or less.

\*2 SEZ-KD25 cannot be connected with MXZ-2D(E)/3E/4E/5E when total capacity of connected indoor units is equivalent to outdoor capacity (capacity ratio is 1).

\*3 MXZ outdoor units are not designed to operate with a single indoor unit with one-to-one piping work. Please install at least two indoor units.

\*4 When connecting the MFZ-KJ Series indoor unit, additional refrigerant is required. For details, please refer to page 106.

\*5 Regarding MXZ-2D33, the second unit should be a different type in the case of selecting one MFZ-KJ.

\*6 P series cannot be connected with MXZ-4E83VAHZ when ampere limit adjustment function is operated.

\*7 Connectable outdoor unit are MXZ-2D33VA-E4, MXZ-2D42VA2-E4, MXZ-2D53VA2-E4, MXZ-2E53VAHZ-E2, MXZ-3E68VA-E2, MXZ-4E72VA-E2, MXZ-4E83VA-E4, MXZ-4E83VAHZ-E3, MXZ-5E102VA-E4.

# POWERFUL HEATING

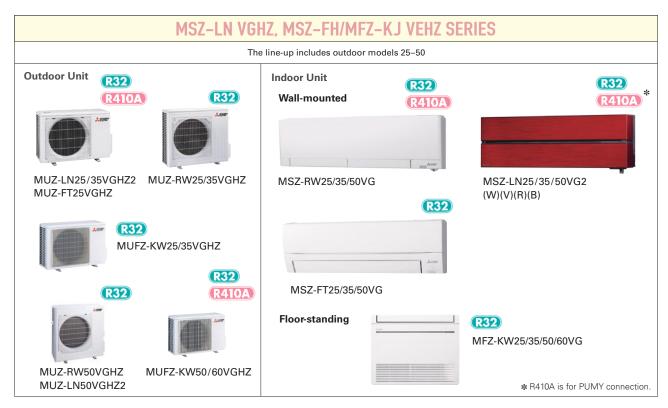

#### **SELECTION**

Choose the series that best matches the building layout.

# SZ-RW SERIES

As a flagship model, RW series realises further outstanding heating performances under extremely cold outdoor temperature even with high energy efficiency. Moreover, excellent air purifying functions and many other smart features deliver a great comfort to you.

#### **Heating Performance**

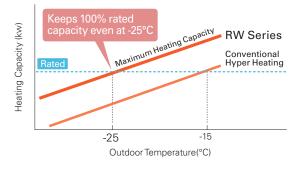

MS7-RW25/35/50VG

Excellent heating performance of RW series delivers the prime warmth into your room. RW series' powerful compressor realises re-

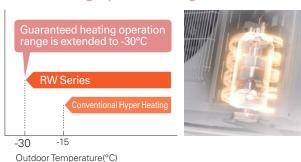

markable maximum heating capacity in low ambient temperature with a high energy efficiency. Also, RW series performs 100% rated capacity even at -25°C, and the operation is guaranteed down to -30°C for all classes (25/35/50).

#### Improved Heating Capacity

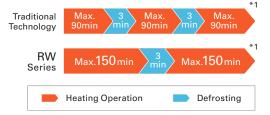

#### Wider Heating Operation Range

#### **Longer Continuous Heating Operation**

RW series with a high frost-detecting technology, made it possible to provide maximum continuous heating operation as long as 150 minutes with less frequent defrosting operations, maintaining a comfortable indoor environment in a long term.

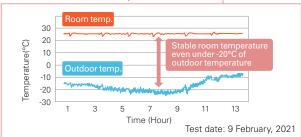

<sup>\*1</sup> The time for heating and defrosting operation depends on the environmental conditions

#### Tested in Sweden and Norway

We have conducted field tests in several cold sites and received high user satisfactions with sufficient air volume and remarkable heating performance of RW series. As the test result shows, we confirmed that RW series provides stable indoor comfortability even in extremely low ambient temperature.

#### Test result in Norway

#### 3D i-see Sensor

3D i-see sensor with the sophisticated hemispherical design measures the temperature of the room with an infrared sensor and detects the position of people, which allows you to choose your preferable airflow such as indirect and direct airflow.

#### Circulator Mode

In heating mode, after reaching the setting temperature, indoor unit automatically starts FAN mode to circulate the air and eliminate temperature unevenness in your room.

Plasma Quad Plus is a plasma-based filtering system which contributes to a better air quality in your room. Plasma Quad Plus applies a voltage of approximately 6,000 volts to the electrode to generate plasma, effectively removing various kinds of airborne particles such as viruses, bacteria, mold, allergen, dust, and PM2.5.

We have confirmed Plasma Quad Plus inhibits 99.8% of adhered COVID-19. \*2

\*Images are for illustration purposes

#### 99% inhibited\*1

Virus (Airborne)

- \*1 Tested Organization: vrc. Center, SMC Test Report No: 28-002 Test Method: JEM1467 Test result: Neutralised 99% of Influenza A virus in 72 minutes in a 25m3 test space
- Tested Organization: Japan Textile Products Quality and Technology Center, Test Report No: 20KB070569, Tested Materials: SARS-CoV-2, Test Method: Original (The test was conducted on the Plasma Quad device alone, not designed to evaluate product performance.) Test Result: Inhibited 99.8% in 360 minutes. The result without the effect of natural attenuation is 96.3%.

#### **Quick Air Purifying Set**

If you press "PURIFIER" button when the unit is turned off, Plasma Quad Plus starts to operate with a fan mode and purifies the air in your room.

#### **Deodorising Filter**

The catalyst in Deodorising Filter denatures the odorous components and destroys them from the source of the odour, quickly delivering fresh air to your room.

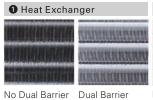

Mitsubishi Electric's Dual Barrier Coating prevents dust and greasy dirt from accumulating on the inner surface of the indoor unit; keeping your air conditioner clean. Two barrier coating prevents hydrophilic dirt penetration, and "hydrophilic particles" prevent hydrophobic dirt from getting into the air conditioner.

Coating used

Coating used

No Dual Barrier Coating used

**Dual Barrier** Coating used

No Dual Barrier Coating used (Image after 10 years)

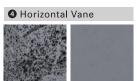

**Dual Barrier** Coating used

Dual Barrier Material performs the same antifouling effect as Dual Barrier Coating, and it is kneaded into horizontal vane and vertical vane material which are hard to apply coating to. Combined with Dual Barrier Coating, the whole air passage of indoor unit is kept clean all vear round.

No Dual Barrier Dual Barrier Material

No Dual Barrier

**Dual Barrier** Material

<sup>\*</sup>Comparison of stains after 10 years of use (based on internal research)

<sup>\*1 \*2</sup> Verified by SIAA test method (JIS Z 2911) with No. JP0501014A0002O on SIAA antifungal agent positive list. Antifungal effect depends on the working environment. Fungicides comply with the SIAA safety criteria. What is SIAA? https://www.kohkin.net/en\_index.htm

#### **Drive Mode Selector**

Drive Mode Selector allows you to select a preferred control setting according to your residential environment from three modes, Wide Room mode, Quiet mode, and Eco mode.

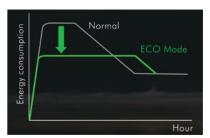

#### Wide Room Mode

Provides a better air distribution in your room and raises the comfort level.

#### Eco Mode

Suppresses a sharp increase in energy consumption by a gradual start-up operation.

#### Quiet Mode

Lowers operation noise level, creating quieter and peaceful environment.

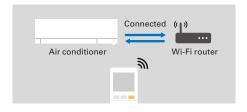

#### Built-in Wi-Fi & App Control

Indoor unit is equipped with Wi-Fi interface which allows you to access MELCloud app, providing you with a flexible control of air conditioner on your smartphone, tablets, and PC.

#### Easy Wi-Fi Set Up

You can easily connect Wi-Fi adaptor in the indoor unit and your local router with just a simple operation of remote controller.

#### Remote Controller with Backlight

The remote controller screen is equipped with LED backlight. The luminous screen allows you to check the setting easily even in the dark.

#### Back Plate with a Hole

With a hole as default in the center of the back plate, the piping can be easily taken out from the back. The edge of the hole is reinforced to ensure the strength.

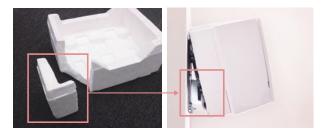

The edge of the hole is reinforced to ensure the strength.

#### Spacer

A part of the packing material can be used as a spacer to lift indoor unit during the left-side piping work, which makes stable installation work possible.

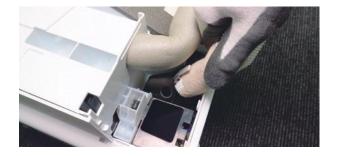

#### **Bottom Removable Structure**

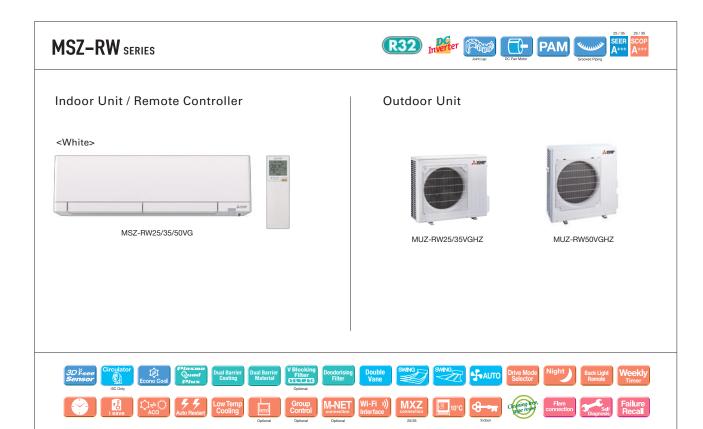

The corner box and the bottom panel are individually removable, and it makes easy to insert tools even in the case of left-side piping.

#### Easy Plugging/Unplugging of Drain Hose

One-touch structure with screw- free claw fixing. Easy to plug and unplug the drain hose when changing on the left and right.

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 675. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(\*3) SHI: Super High

(\*4) SEER, SCOP and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

# LIVE TO THE SERIES REPORT OF THE SERIES

Unlike conventional air conditioning systems, the LN Series don't lose heating capacity when it's cold outside. Original technologies ensure excellent heating performance under extremely low outdoor temperatures and an impressive guaranteed operating range.

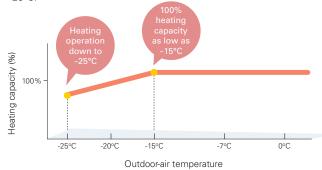

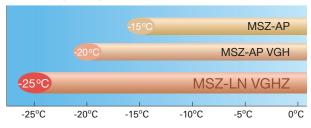

MSZ-LN25/35/50VG2(W)(V)(R)(B)

### **Unparalleled Heating Performance**

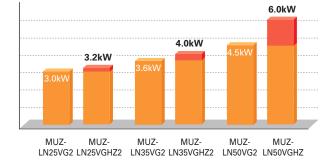

LN Series outdoor units are equipped with a high-output compressor that provides enhanced heating performance under low outdoor temperatures. The heating operation range is extended down to  $-25^{\circ}\mathrm{C}$ 

### **Operating Range**

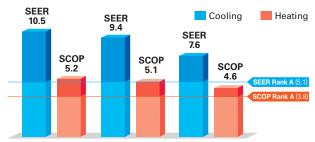

### Declared Capacity (at reference design temperature)

# High Energy Efficiency – Energy Rank of A<sup>+</sup> or higher for All Models

With indoor units that combine functionality, design and capacity and outdoor units equipped with a high-efficiency compressor, the MUZ-LN VGHZ simultaneously achieves high heating capacity and energy-saving performance.

MUZ-LN25VGHZ2 MUZ-LN35VGHZ2 MUZ-LN50VGHZ

# Freeze-prevention Heater Equipped as Standard

The Freeze-prevention heater restricts lowered capacity and operation shutdowns caused by the drain water freezing. This supports stable operation in low-temperature environments.

### Operation Guaranteed at Outside Temperature of -25°C

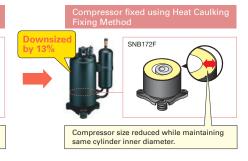

Without Freeze-prevention heater

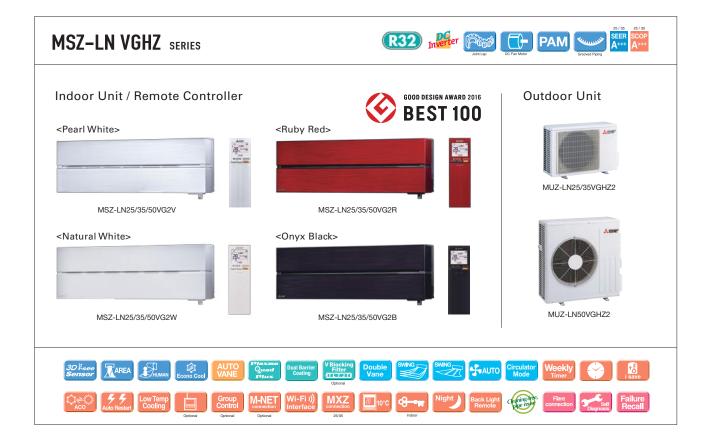

With Freeze-prevention heater

### Compact, Powerful Compressor

A special manufacturing technology, "Heat Caulking Fixing Method," has been introduced to reduce compressor size while maintaining a high compressor output. This technology enables the installation of a powerful compressor in compact MUZ outdoor units. As a result, excellent heating performance is achieved when operating in cold outdoor environments.

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP; if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

The GWP of R32 is 675 in the IPCC 4th Assessment Report.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(\*3) SHI: Super High
(\*4) SEER, SCOP and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

(\*5) Please see page 53-55 for heating (warmer season/colder season) specifications.

# FTVGHZ SERIES

Unlike conventional air conditioning systems, the FT Series don't lose heating capacity when it's cold outside. Original technologies ensure excellent heating performance under extremely low outdoor temperatures and an impressive guaranteed operating range. Furthermore, the smaller and stylish indoor unit does not give you the limitation of installation location.

MSZ-FT25/35/50VG(K)

# Powerful Core for powerful heating

### **Compact Design**

The FT series features its compact design with 280mm height and 229mm depth, which is suitable for the installation above the door.

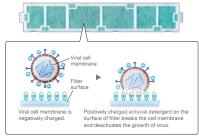

### V Blocking Filter (Optional)

V Blocking Filter with antiviral effect inhibits 99% of adhered virus, and other harmful substances, such as bacteria, mold and allergen.

Two-layered filter with non-woven fabric and electrostatic filter can effectively capture and remove small particles from the air in your room.

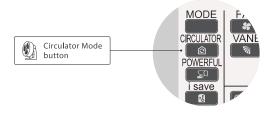

### Remote Controller with Backlight

The remote controller screen is equipped with an LED backlight. The luminous screen allows you to check the setting easily even in the dark.

Circulator Mode

After reaching the target temperature, heating mode will automatically switch to Circulator mode, which makes the unit go into "fan-only" state and mixes warm air in the room.

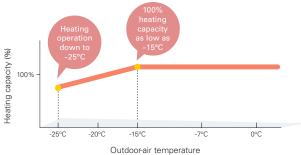

### Built-in Wi-Fi

(MSZ-FT25/35/50VGK)

Mitsubishi Electric Wi-Fi Control gives you the freedom to tailor your heating and cooling needs through computers, tablets, or smartphones from anywhere.

### **Hyper Heating**

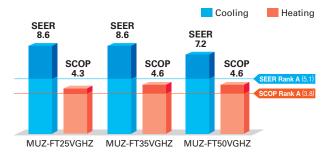

Mitsubishi Electric's powerful compressor and highly cold-resistant parts enable the heat pump to provide 100% or more heating capacity even at  $-15^{\circ}$ C, and also the heating operation is guaranteed down to  $-25^{\circ}$ C.

# High Energy Efficiency – Energy Rank of A<sup>+</sup> or higher for All Models

With indoor units that combine functionality, design and capacity and outdoor units equipped with a high-efficiency compressor, the MUZ-FT VGHZ simultaneously achieves high heating capacity and energy-saving performance.

(MSZ-FT25/35/50VG(K)-SC Scandinavian Model)

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1kg of CO<sub>2</sub>, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

The GWP of R410A is 2088 in the IPCC 4th Assessment Report.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

<sup>(\*1)</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO2, over a peniod of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional. The GWP of R410A is 2088 in the IPCC 4th Assessment Report.

(\*2) Energy consumption based on standard test results. Actual energy consumption will depend on how the appliance is used and where it is located.

(\*3) SHI: Super High

(\*4) SEER, SCOP and other related description are based on COMMISSION DELEGATED REGULATION (EU) No.626/2011. The temperature conditions for calculating SCOP are based on "Average Season".

# **ZUBADAN** SERIES

The ZUBADAN Series incorporates an original Flash Injection technology that improves the already high heating capacity of the system. This new member of the series line-up ensures comfortable heat pump-driven heating performance in cold regions.

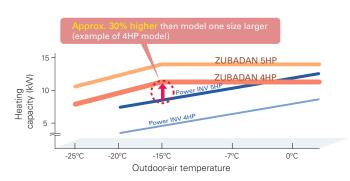

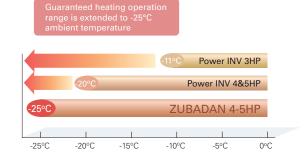

\* Units in photo are Japanese models.

European model specifications are different.

### Improved Heating Performance

Mitsubishi Electric's unique "Flash Injection" circuit achieves remarkably high heating performance. This technology has resulted in an excellent heating capacity rating in outdoor temperatures as low as -15°C, and the guaranteed heating operation range of the heating mode has been extended to -25°C. Accordingly, the heat-pump units of the ZUBADAN Series are perfect for warming homes in the coldest of regions.

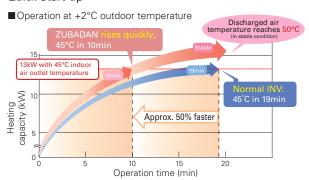

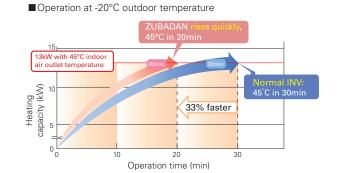

### **Enhanced Comfort**

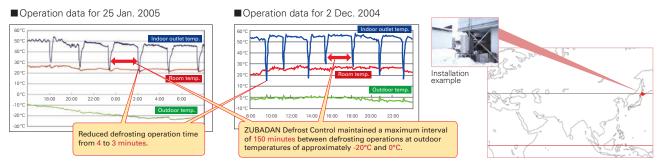

The Flash Injection circuit improves start-up and recover from the defrosting operation. A newly introduced defrost operation control also improves defrost frequency. These features enable the temperature to reach the set temperature more quickly, and contribute to maintaining it at the desired setting.

### Quick Start-up

ZUBADAN Defrost Control and Faster Recovery from Defrost Operation Field Test Results: Office building in Asahikawa, Hokkaido, Japan

# ErP Lot 10 Compliant with High Energy-efficiency Achieving SEER/SCOP Rank A and A+

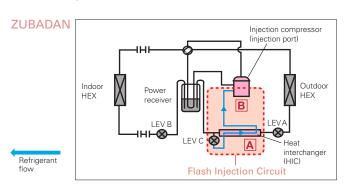

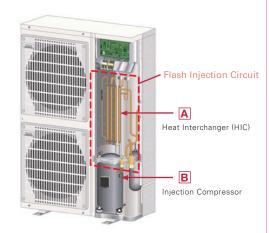

Powerful heating yet annually high energy efficiency in both cooling and heating, achieving rank A and A+.

# Mitsubishi Electric's Flash Injection Technology The Key to High Heating Performance at Low Outdoor Temperatures

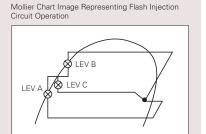

### ■Flash Injection Circuit

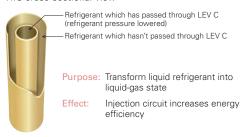

The ZUBADAN Series is equipped with Mitsubishi Electric's original Flash Injection Circuit, which is comprised of a bypass circuit and heat interchanger (HIC). The HIC transforms rerouted liquid refrigerant into a gas-liquid state to lower compression load. This process ensures excellent heating performance even when the outdoor temperature drops very low.

In traditional units, when the outdoor temperature is low, the volume of refrigerant circulating in the compressor decreases due to the drop in refrigerant pressure and the protection from overheating caused by high compression, thereby reducing heating capacity. The Flash Injection Circuit injects refrigerant to maintain the refrigerant circulation volume and compressor operation load, thereby maintaining heating capacity.

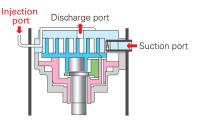

### A Heat Interchanger (HIC)

HIC cross-sectional view

The compressor is subjected to a heavy load when compressing liquid refrigerant, and the result is lower operation efficiency. The addition of HIC supports refrigerant heat exchange at two different pressure levels. The heat-exchange process transforms the injected liquid refrigerant into a gas liquid state, thereby decreasing the load on the compressor during the compression process.

### B Injection Compressor

Purpose: To increase the volume of refrigerant being circulated Effect: Improves heating capacity at low outdoor tempera-

Improves heating capacity at low outdoor temperatures, and enables higher indoor-air outlet temperature adjustment and higher defrost operation speed

Refrigerant passes from the HIC into the compressor through the injection port. Having two refrigerant inlets makes it possible to raise the volume of refrigerant being circulated when the outdoor temperature is low and at the start of heating operation.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO2, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.
\*2 Energy consumption based on standard test results. Actual energy consumption based on standard test results.
\*3 Optional air protection guide is required where ambient temperature is lower than -5°C.
\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

<sup>\*1</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 1975. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 1975 times higher than 1 kg of CO2, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.
\*2 Energy consumption based on standard test results. Actual energy consumption based on standard test results.
\*3 Optional air protection guide is required where ambient temperature is lower than -5°C.
\*4 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

# MXZ-VAHZ SERIES

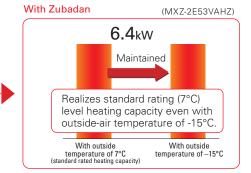

New hyper-heating MXZ allows you to create an oasis of comfort throughout your home and office in the rooms you use most, any time of the year.

# Standard rated heating capacity is maintained even when the outside-air temperature drops to -15°C.

Maintains high capacity output even when outside-air temperature is low.

### Can operate at outside-air temperature of -25°C

- 1. Incorporated key parts resistant to cold of up to -25°C after rigorous selection.
- 2. Printed circuit board-core of the air conditioner—is coated on both sides to protect it in harsh environments.

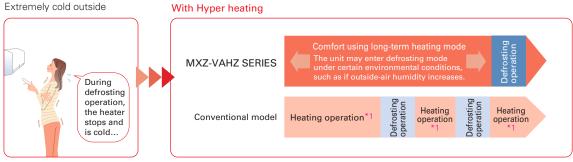

### Freeze-prevention heater standard equipment

Prevents capacity loss and operation from stopping due to drain water freezing.

### Continuous heating for long periods

Wasteful defrosting operation suppressed to enable more comfortable long-term continuous heating.

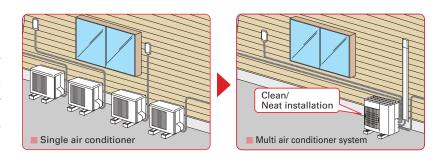

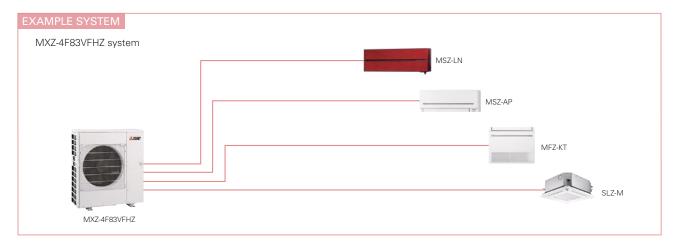

<sup>\*1:</sup> Conventional model performs continuous heating approximately 30min up to a maximum of 90min.

# One outdoor unit supports multiple indoor units.

With MXZ-VAHZ, one outdoor unit can cool and heat up to six rooms. They can be installed neatly in sites with limited space such as condominium balconies.

\*Please note that cooling and heating modes cannot be run simultaneously in different rooms.

### Freedom of combinations in cold region greatly enhanced

The variety of indoor unit connection options in cold regions, restricted until now, has been greatly increased. Increased design freedom.

★1: P series cannot be connect with MXZ-4E83VAHZ when ampere limit adjustment function is operated.

<sup>###</sup> Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 2088. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 2088 times higher than 1 kg of CO2, over a period of 100 years. Never try to interfere with the refrigerant clicuit yourself or disassemble the product yourself and always ask a professional.

\*2 Energy consumption based on standard test results.

\*4 EER/COP, EEL rank, SEER/SCOP values and energy efficiency class are measured when connected to the indoor unit; listed below.

\*4 EER/COP, EEL rank, SEER/SCOP values and energy efficiency class are measured when connected to the indoor units listed below.

MX2-2F53VFHZ2 MSZ-LN18WG2 + MSZ-LN25VG2 + MSZ-LN25VG2

MX2-4E33VAHZ MSZ-EF18VE + MSZ-EF18VE + MSZ-EF2VE + MSZ-EF2VE

\*5 Indoor unit compatibility table is shown on page 139-140.

\*6 Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance contains a refrigerant fluid with a GWP equal to 550. This means that if 1 kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 550 times higher than 1 kg of CO2, over a period of 100 years. Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.

The GWP of R32 is 675 in the IPCC 4th Assessment Report.

\*7 SEER and SCOP are based on 2009/125/EC:Energy-related Products Directive and Regulation(EU) No206/2012.

To ensure full capacity in cold and snowy regions...

# 3 Important Points to Remember When Installing the Outdoor Unit

\* RAC/PAC (inc. Air to Water) /MXZ

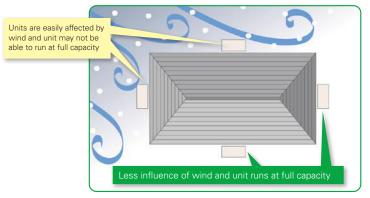

Wind and snow can significantly reduce capacity.

Be sure to check the infomation below and install the outdoor unit correctly.

### Installation Location

Be aware of the prevailing wind direction in winter and install the outdoor unit where it is as sheltered as possible.

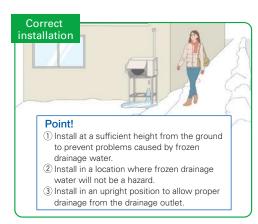

2

### Measures for Drainage of Water

### Case 1: Unit is installed close to passage (walkway)

Do not install the unit close to passage as drainage water from the unit may freeze and cause a slipping hazard.

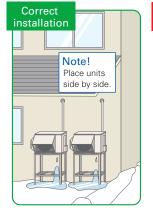

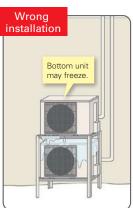

### Case 2: Multiple units are installed

Do not install units on top of one another as it may cause frozen drainage water on the bottom unit.

### Unit is installed on the ground

To avoid the adverse effects of snow and frozen drainage water, install the unit on a stand to ensure a sufficient height from the ground.

[RAC/PAC/MXZ]

### Point!

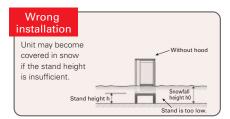

- 1) Install at a position/height to prevent the unit being buried in snow \*1 and the adverse effects of frozen drainage water.\*2
- 2) Install so as to avoid the effects of snow or snowdrift.
- 3 Install so as to avoid the damage from falling snow or icicles \*1 Install at a height above the highest snowfall depth.
- \*2 Even for correct installations, dripping drainage water may form an icicle which needs to be cleared away regularly to prevent a blocked drainage outlet.

Use a stand to add sufficient height to protect the unit heat exchanger from snow and prevent icicles forming during defrost operation.

### Correct installation Minimum height (h) should be higher than the highest snowfall depth (h0) +20cm

### Install snow protection hood as necessary

[RAC/PAC/MXZ]

### Necessity of accessories (drain socket & centralised drain pan, stand, snow protection hood, base heater)

|  | Snowy region  | Cold region                  |  |
|--|---|------------------------------|--|
|  | Countermeasures for snow  | Countermeasures for freezing | Remarks  |
| Drain socket,<br>Centralised drain pan | Not used  | Not used                     | Prevents freezing  |
| Stand                                  | Needed  | Needed                       | IRAC / PAC / MXZ]  1. Install so as to prevent the unit being buried in snow (at a height greater than the highest snowfall depth). Be sure that the stand does not obstruct drainage.  2. Install so as to prevent damage to the unit due to frozen drainage water (icicles).   |
| Snow<br>protection<br>hood             | Needed  *When the installation position is subject to snowfall. | _                            | Prevents heat exchanger from being covered in snow.     Prevents snow accumulating inside the air duct.  |
| Base heater                            | _   | Needed                       | [RAC/PAC/MXZ] Outdoor units equipped with a heater for cold regions are those with an "H" in the model name. For the cold-climate zone, use of a unit with a heater is strongly recommended. Even for the moderate-climate zone use of a unit with a heater is recommended for regions subject to high humidity in winter. |

### **CAUTION**

### About disposal of drainage water

When the unit is installed in cold or snowy regions:

Drainage water may freeze in the drain socket/hose and prevent the fan from rotating.

Do not attach a drain socket packaged as an accessory to the unit.

\* In the case that fitting a drain socket is absolutely necessary, steps must be taken so that the drainage water does not freeze For more information, please consult Mitsubishi Electric or one of its dealers/resellers.

Arrangement for snow protection hood [RAC/PAC/MXZ]

Separately sold parts are available for some models.

Please consult Mitsubishi Electric or one of its dealers/resellers at the time of purchase for details.

# **NEW ECODESIGN DIRECTIVE**

### WHAT IS THE ErP DIRECTIVE?

The Ecodesign Directive for Energy-related Products (ErP Directive) establishes a framework to set mandatory standards for ErPs sold in the European Union (EU). The ErP directive introduces new energy-efficiency ratings across various product categories and affects how products such as computers, vacuum cleaners, boilers and even windows are classified in terms of environmental performance.

Regulations that apply to air conditioning systems of rated capacity up to 12kW came into effect as of January 1, 2013. Based the use of future-orientated technologies, Mitsubishi Electric is one step ahead of these changes, with our air conditioning systems already achieving compliance with these new regulations.

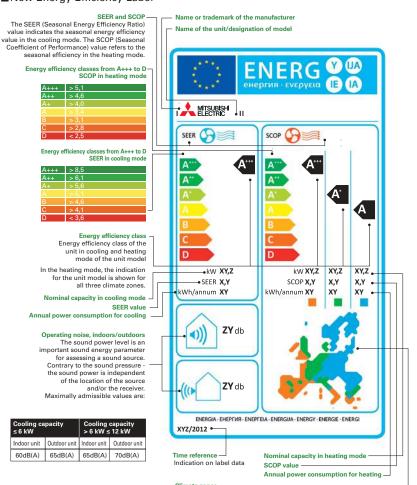

### **NEW ENERGY LABEL AND MEASUREMENTS**

Under regulation 2011/626/EU, supplementing directive 2010/30/EU, air conditioning systems are newly classified into energy-efficiency classes on the basis of a new energy labelling system, which includes three new classes: A+, A++ and A+++.

Revisions to the measurement points and calculations of the seasonal energy efficiency ratio (SEER) and seasonal coefficient of performance (SCOP) has resulted in changes to how air conditioning systems are classified into energy-efficiency classes.

Specifically, for cooling mode, air conditioning systems must achieve at least class B. For heating mode, air conditioning systems must achieve at least a SCOP value of 3.8.

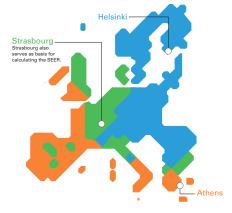

### ■New Energy Efficiency Label

For heating mode, the EU is divided into three climate zones for calculation and classification purposes. This aims at calculating the energy efficiency taking into consideration the actual regional

### ■Climate Zones for Heating Mode

Reference climate zones for calculating the SCOP
Since the climate conditions have a great influence on the operating
behaviour in the heat pump mode, three climate zones have
been stipulated for the EU: warm, moderate, cold. The measurement
points are homogenous at 12°C, 7°C, 2°C and –7°C.

|        | Temperat | ure conditions |         |
|--------|----------|----------------|---------|
| artial | Outdoors |                | Indoors |
| oad    | DB       | WB             | DB      |
| -      | -        | -              | 20°C    |
| 00%    | 2°C      | 1°C            | 20°C    |
| 64%    | 7°C      | 6°C            | 20°C    |
| 29%    | 12°C     | 11°C           | 20°C    |

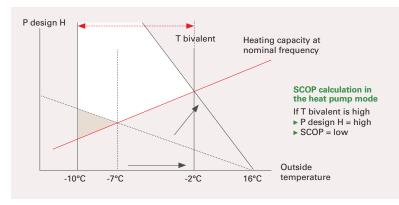

| Moderate (S | Strasbourg) |                |         |
|-------------|-------------|----------------|---------|
|             | Temperat    | ure conditions |         |
| Partial     | Outdoors    |                | Indoors |
| load        | DB          | WB             | DB      |
| 88%         | -7°C        | -8°C           | 20°C    |
| 54%         | 2°C         | 1°C            | 20°C    |
| 35%         | 7°C         | 6°C            | 20°C    |
| 15%         | 12°C        | 11°C           | 20°C    |

|         | Tempera  | ture conditions |         |
|---------|----------|-----------------|---------|
| Partial | Outdoors |                 | Indoors |

| 61%     | -7°C     | −8°C            | 20°C    |
| 37%     | 2°C      | 1°C             | 20°C    |
| 24%     | 7°C      | 6°C             | 20°C    |
| 11%     | 12°C     | 11°C            | 20°C    |

### SEER/SCOP

Air conditioning systems were previously assessed using the energy-efficiency rating (EER), which evaluated efficiency in cooling mode, and the coefficient of performance (COP), which defined the efficiency, or the ratio of consumed and output power, in heating mode. Under this system, assessments were not truly reflective of performance as they were based on a single measurement point, which led to manufacturers optimising products accordingly in order to achieve higher efficiency ratings. SEER and SCOP address this problem by including seasonal variation in the ratings via use of realistic measurement points. For cooling mode, measurements at outside temperatures of 20, 25, 30 and 35°C are incorporated and weighted in accordance with climate data for Strasbourg, which is used as a single reference point for the whole EU. For instance, for partial-load operation, which represents more than 90% of operation, there is a correspondingly high weighting for the efficiency classification. For heating mode, a comprehensive temperature profile for the whole EU was not possible, so the EU has been divided into three climate zones, north, central and south, and load profiles created. The same measurement points, at outside temperatures of 12, 7, 2 and -7°C, are used for all three zones.

### ■SCOP Calculation

### Technical Terms with Respect to the SCOP

P design H: Corresponds to a heating load of 100%. The value depends on the selected bivalence point. T design: Outside temperature which determines

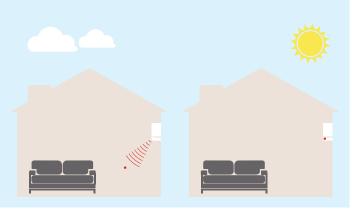

**T design:** Outside temperature which determines the P design H point. The latter is determined from the area conditions.

**T bivalent:** Corresponds to the lowest temperature at which full heating performance can be achieved with the heat pump (without additional heating). This point can be freely selected within the prescribed temperature ranges (T design -T bivalent).

### SOUND PRESSURE LEVEL

Consumers will also receive more information on the noise levels emitted by split-system air conditioners to help them make their purchasing decision. Specifically, the sound power level of indoor and outdoor units is to be indicated in decibels as an objective parameter. Knowing the sound power makes it possible to calculate sound emissions while considering distance and radiation characteristics, which is beneficial because it allows the noise levels of different air conditioning systems to be compared regardless of the usage location and how the sound pressure is measured. This is an improvement on sound pressure values which are usually measured at an approximate distance of 1m where all modern split-system air conditioning systems tend to be very quiet at an average of 21 decibels.

### ■Sound Pressure vs Sound Power Level

Sound pressure level dB(A)

The sound pressure level is a sound field parameter which indicates the perceived operating noise of an indoor unit within a certain distance.

Sound power level dB(A)

The sound power is an acoustic parameter which describes the source strength of a sound generator and is thus independent of the distance to the receiver location.

Mitsubishi Electric inverters ensure superior performance including the optimum control of operation frequency. As a result, optimum power is applied in all heating/cooling ranges and maximum comfort is achieved while consuming minimal energy. Fast, comfortable operation and amazingly low running cost — That's the Mitsubishi Electric promise.

### INVERTERS — HOW THEY WORK

Inverters electronically control the electrical voltage, current and frequency of electrical devices such as the compressor motor in an air conditioner. They receive information from sensors monitoring operating conditions, and adjust the revolution speed of the compressor, which directly regulates air conditioner output. Optimum control of operation frequency results in eliminating the consumption of excessive electricity and providing the most comfortable room environment.

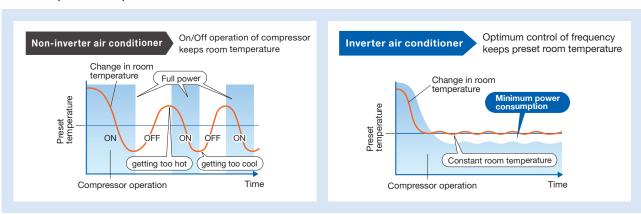

### **ECONOMIC OPERATION**

Impressively low operating cost is a key advantage of inverter air conditioners. We've combined advanced inverter technologies with cutting-edge electronics and mechanical technologies to achieve a synergistic effect that enables improvements in heating/cooling performance efficiency. Better performance and lower energy consumption are the result.

### TRUE COMFORT

Below is a simple comparison of air conditioner operation control with and without an inverter.

### ■ Inverter operation comparison

The compressors of air conditioners without an inverter start and stop repeatedly in order to maintain the preset room temperature. This repetitive on/off operation uses excessive electricity and compromises room comfort. The compressors of air conditioners equipped with an inverter run continuously; the inverter quickly optimizing the operating frequency according to changes in room temperature. This ensures energy-efficient operation and a more comfortable room.

### Point 1 Quick & Powerful

Increasing the compressor motor speed by controlling the operation frequency ensures powerful output at start-up, brings the room temperature to the comfort zone faster than units not equipped with an inverter. Hot rooms are cooled, and cold rooms are heated faster and more efficiently.

### Point 2 Room Temperature Maintained

The compressor motor operating frequency and the change of room temperature are monitored to calculate the most efficient waveform to maintain the room temperature in the comfort zone. This eliminates the large temperature swings common with non-inverter systems, and guarantees a pleasant, comfortable environment.

### **KEY TECHNOLOGIES**

### Our Rotary Compressor

Our rotary compressors use our original "Poki-Poki Motor" and "Heat Caulking Fixing Method" to realise downsizing and higher efficiency, and are designed to match various usage scenes in residential to commercial applications. Additionally, development of an innovative production method known as "Divisible Middle Plate" realises further size/weight reductions and increased capacity while also answering energy-efficiency needs.

### Our Scroll Compressor

Our scroll compressors are equipped with an advanced frame compliance mechanism that allows self-adjustment of the position of the orbiting scroll according to pressure load and the accuracy of the fixed scroll position. This minimises gas leakage in the scroll compression chamber, maintains cooling capacity and reduces power loss.

### MORE ADVANTAGES WITH MITSUBISHI ELECTRIC

### Joint Lap DC Motor

Mitsubishi Electric has developed a unique motor, called the "Poki-Poki Motor" in Japan, which is manufactured using a joint lapping technique. This innovative motor operates based on a highdensity, high-magnetic force, leading to extremely high efficiency and reliability.

### Magnetic Flux Vector Sine Wave Drive

This drive device is actually a microprocessor that converts the compressor motor's electrical current waveform from a conventional waveform to a sine wave (180°conductance) to achieve higher efficiency by raising the motor winding utilisation ratio and reducing energy loss.

### Reluctance DC Rotary Compressor

Powerful neodymium magnets are used in the rotor of the reluctance DC motor. More efficient operation is realised by strong magnetic and reluctance torques produced by the magnets.

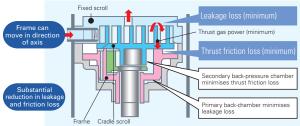

### Highly Efficient DC Scroll Compressor

Higher efficiency has been achieved by adding a frame compliance mechanism to the DC scroll compressor. The mechanism allows movement in the axial direction of the frame supporting the cradle scroll, thereby greatly reducing leakage and friction loss, and ensuring extremely high efficiency at all speeds.

### Heat Caulking Fixing Method

To fix internal parts in place, a "Heat Caulking Fixing Method" is used, replacing the former arc spot welding method. Distortion of internal parts is reduced, realising higher efficiency.

### DC Fan Motor

A highly efficient DC motor drives the fan of the outdoor unit. Efficiency is much higher than an equivalent AC motor.

### WW Vector-Wave Eco Inverter

This inverter monitors the varying compressor motor frequency and creates the most efficient waveform for the motor speed. As the result, operating efficiency in all speed ranges is improved, less power is used and annual electricity cost is reduced.

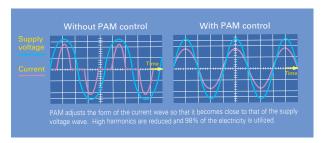

### Smooth wave pattern

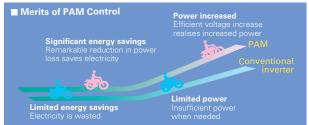

Inverter size has been reduced using insertmolding, where the circuit pattern is molded into the synthetic resin. To ensure quiet operation, soft PWM control is used to prevent the metallic whine associated with conventional inverters

### PAM PAM (Pulse Amplitude Modulation)

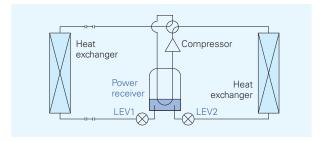

PAM is a technology that controls the current waveform so that it resembles the supply voltage wave, thereby reducing loss and realising more efficient use of electricity. Using PAM control, 98% of the input power supply is used effectively.

### Power Receiver and Twin LEV Control

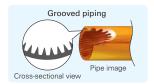

Mitsubishi Electric has developed a power receiver and twin linear expansion valves (LEVs) circuit that optimise compressor performance. This technology ensures optimum control in response to operating waveform and outdoor temperature. Operating efficiency has been enhanced by tailoring the system to the characteristics of R410A refrigerant.

### **Grooved Piping**

High-performance grooved piping is used in heat exchangers to increase the heat exchange area.

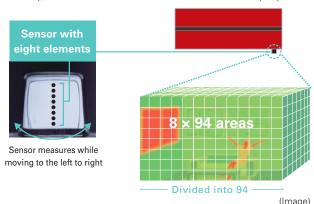

# **COMFORT**

### 3D i-see Sensor

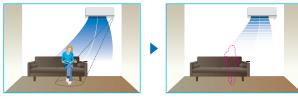

### 3D F-see Sensor for M SERIES

The LN Series and FH Series are equipped with the 3D i-see Sensor, an infrared-ray sensor that measures the temperature at distant positions. While moving to the left and right, eight vertically arranged sensor elements analyze the room temperature in three dimensions. This detailed analysis makes it possible to judge where people are in the room, thus allowing creation of features such as "Indirect airflow," to avoid airflow hitting people directly, and "direct airflow" to deliver airflow to where people are.

### No occupancy energy-saving mode

The sensors detect whether there are people in the room. When no-one is in the room, the unit automatically switches to energy-saving mode.

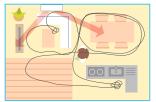

The "3D i-see Sensor" detects people's absence and the power consumption is automatically reduced approximately 10% after 10 minutes and 20% after 60 minutes.

### **Indirect Airflow**

The indirect airflow setting can be used when the flow of air feels too strong or direct. For example, it can be used during cooling vaert airflow and prevent body temperature from becoming excessively cooled.

Even Airflow \*LN Series only Normal swing mode

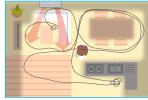

The airflow is distributed equally throughout the room, even to spaces where there is no human movement.

### **Direct Airflow**

This setting can be used to directly target airflow at people such as for immediate comfort when coming indoors on a hot (cold) day.

Even airflow mode

The 3D i-see sensor memorizes human movement and furniture positions, and efficiently distributes airflow.

### No occupany Auto-OFF mode \*LN Series only

The sensors detect whether or not there are people in the room. When there is no one in the room, the unit turns off automatically.

### 3D F-see Sensor for S & P SERIES

### Detects number of people

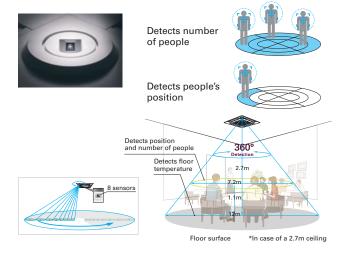

The 3D i-see Sensor detects the number of people in the room and adjusts the power accordingly. This makes automatic power-saving operation possible in places where the number of people changes frequently. Additionally, when the area is continuously unoccupied, the system switches to a more enhanced power-saving mode. Depending on the setting, it can also stop the operation.

### Detects people's position

Once a person is detected, the angle of the vane is automatically adjusted. Each vane can be indenpendently set to "Direct Airflow" or "Indirect Airflow" according to taste.

### Highly accurate people detection

A total of eight sensors rotate a full 360° in 3-minute intervals. In addition to detecting human body temperature, our original algorithm also detects people's positions and the number of people.

### Detects number of people

### Room occupancy energy-saving mode

The 3D i-see Sensor detects the number of people in the room. It then calculates the occupancy rate based on the maximum number of people in the room up to that point in time in order to save airconditioning power. When the occupancy rate is approximately 30%, air-conditioning power equivalent to 1°C during both cooling and heating operation is saved. The temperature is controlled according to the number of people.

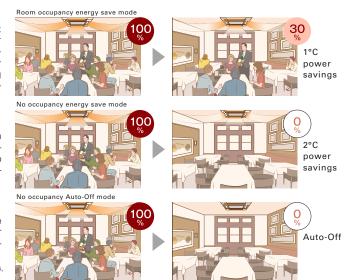

### No occupancy energy-saving mode

When 3D i-see Sensor detects that no one is the room, the system is switched to a pre-set power-saving mode. If the room remains unoccupied for more than 60min, air-conditioning power equivalent to 2°C during both cooling and heating operation is saved. This contributes to preventing waste in terms of heating and cooling.

### No occupancy Auto-OFF mode\*

When the room remains unoccupied for a pre-set period of time, the air conditioner turns off automatically, thereby providing even greater power savings. The time until operation is stopped can be set in intervals of 10min, ranging from 60 to 180 min.

\* When MA Remote Controller is used to control multiple refrigerant systems, "No occupancy Auto-OFF mode" cannot be used.

\*PAR-41MAA is required for each setting

### Detects people's position

### Direct/Indirect settings\*

The horizontal airflow spreads across the ceiling. When set to "Indirect Airflow" uncomfortable drafty-feeling is eliminated!

\*PAR-41MAA or PAR-SL101A-E is required for each setting.

### Seasonal airflow\*

### When cooling

Saves energy while keeping a comfortable effective temperature by automatically switching between ventilation and cooling. When a pre-set temperature is reached, the air conditioning unit switches to swing fan operation to maintain the effective temperature. This clever function contributes to keeping a comfortable coolness.

The air conditioning unit automatically switches between circulator and heating. Wasted heat that accumulates near the ceiling is reused via circulation. When a pre-set temperature is reached the air conditioner switches from heating to circulator and blows air in the horizontal direction. It pushes down the warm air that has gathered near the ceiling to people's height, thereby providing smart heating.

\*PAR-41MAA is required for each setting.

### Area Temperature Monitor

The "3D i-see Sensor" monitors the whole room in sections and directs the airflow to areas of the room where the temperature does not match the temperature setting. (When cooling the room, if the middle of the room is detected to be hotter, more airflow is directed towards it.) This eliminates unnecessary heating /cooling and contributes to lower electricity costs.

### Cooling mode Warmei

# **COMFORT**

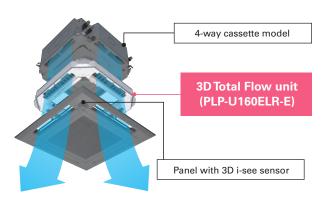

### 3D TOTAL FLOW

### 3DTotal Flow\*

3D Total Flow is an innovative function. Our original 3D i-see sensor detects the temperature of the floor, and then the newly installed 3D Total Flow unit automatically controls the airflow in the left/right directions in a smart manner.

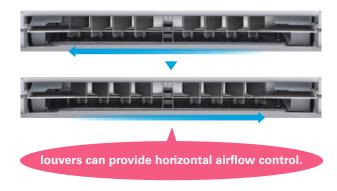

\*3D Total Flow unit(PLP-U160ELR-E) cannot be used with Plasma Quad Connect(PAC-SK51FT-E), Insulation kit(PAC-SK36HK-E), Shutter Plate(PAC-SJ37SP-E),

Multi functional casement(PAC-SJ41TM-E) and High-efficiency filter element(PAC-SH59KF-E)

### Horizontal louver (3D Total Flow)

In addition to the ability of conventional models to control airflow in the vertical direction, the adoption of a horizontal louver unit allows each outlet to blow air over a horizontal angle of 90 degrees. The combination of four outlets delivers 360° airflow control around the entire circumference. This now makes it possible to blow air in diagonal directions which eliminates temperature irregularities.

### Fine-tuned sensing & airflow direction control (3D Total Flow)

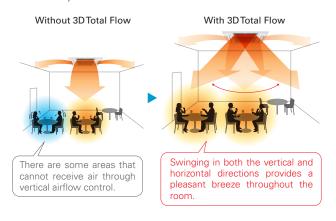

### Swinging

Since airflow can be controlled in the horizontal and vertical directions, you can efficiently make the entire room comfortable.

### Horizontal, vertical, and diagonal airflow delivered to every corner

The combination of the vertical vanes with the horizontal louver unit makes it possible to direct airflow in any direction. This quickly makes the entire room comfortable, even when diagonal airflow is necessary.

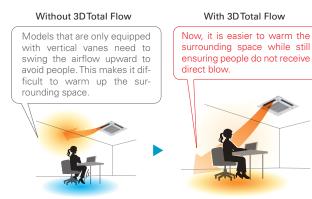

### Indirect mode

When set to "Indirect" mode, the system detects the position of a person and maintains comfort while diverting airflow away from them.

### Prevents direct airflow and keeps you comfortable

This function prevents people from being directly exposed to airflow while still ensuring comfort. The "Indirect" mode of 3D Total Flow keeps the downward airflow while avoiding direct blow to people, delivering a pleasant warmth.

<sup>\*</sup>If people are present throughout the entire airflow range of an outlet, the airflow is shifted horizontally to avoid direct airflow.

### **Targeting**

The system can detect spaces with uneven temperatures and target them by sending air even if they are in a diagonal direction.

### Detects and targets areas with uneven temperatures

3D i-see sensor detects areas with uneven temperatures, even if they are caused by the installation orientation of the air conditioner or the influence of strong sunlight. Efficient air conditioning is possible thanks to the ability to send focused airflow to such areas, even those in a diagonal position.

# Without 3D Total Flow Depending on application, conventional systems may take a long time to cool down hot spots. With 3D Total Flow The new system efficiently eliminates hot spots by using targeted airflow.

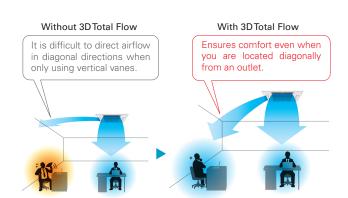

### Direct mode

When set to "Direct" mode, the system detects the position and diverts airflow towards wherever they are located.

### Delivers airflow even in diagonal directions

You can freely turn on "Direct" mode depending on personal preference. This allows for air conditioning in diagonal directions which was difficult for models that could only swing the airflow up and down. This feature is perfect for when you come back home on a hot day.

# **COMFORT**

### **ENERGY-SAVING**

### **Econo Cool Energy-Saving Feature**

"Econo Cool" is an intelligent temperature control feature that adjusts the amount of air directed towards the body based on the air-outlet temperature. The setting temperature can be raised by as much as 2°C without any loss in comfort, thereby realising a 20% gain in energy efficiency. (Function only available during manual cooling operation.)

|                       | Conventional | Econo Cool |
|-----------------------|--------------|------------|
| Ambient temperature   | 35°C         | 35°C       |
| Set temperature       | 25°C         | 27°C       |
| Perceived temperature | 30°C         | 29.3°C     |

### Econo Cool Mode

A comfortable room environment is maintained even when setting the temperature 2°C higher than the conventional cooling mode.

Econo Cool on

Temperature distribution (°C) 16 18 20 22 24 26 28 Conventional cooling mode

### Demand Function (Onsite Adjustment)

The demand function can be activated when the unit is equipped with a commercially available timer or an On/Off switch is added to the CNDM connector (option) on the control board of the outdoor unit. Energy consumption can be reduced up to 100% of the normal consumption according to the signal input from outside.

[Example: Power Inverter Series]

Limit energy consumption by changing the settings of SW7-1, SW2 and SW3 on the control board of the outdoor unit. The following settings are possible.

| SW7-1 | SW2 | SW3 | Energy consumption |
|-------|-----|-----|--------------------|
|       | OFF | OFF | 100%               |
| ON    | ON  | OFF | 75%                |
| ON    | ON  | ON  | 50%                |
|       | OFF | ON  | 0% (Stop)          |

\*PUHZ outdoor only

### **AIR DISTRIBUTION**

### **Double Vane**

Double vane separates the airflow in the different directions to deliver airflow not only across a wide area of the room, but also simultaneously to two people in different locations.

### Horizontal Vane

The air outlet vane swings up and down so that the airflow is spread evenly throughout the room.

### Vertical Vane

The air outlet fin swings from side to side so that the airflow reaches every part of the room.

### High Ceiling Mode

In the case of rooms with high ceilings, the outlet-air volume can be increased to ensure that air is circulated all the way to the floor.

### Low Ceiling Mode

If the room has a low ceiling, the airflow volume can be reduced for less draft.

### ₩ Auto Fan Speed Mode

The airflow speed mode adjusts the fan speed of the indoor unit automatically according to the present room conditions

### Circulator Mode

After reaching the target temperature, heating mode will automatically switch to circulator mode, which makes the unit go into "fan-only" state and mixes warm air to eliminate uneven temperature in the room.

# AIR QUALITY

# Plasma Quad Plus

Plasma Quad Plus is a plasma-based filter system that effectively removes six kinds of air pollutants. Plasma Quad Plus captures mold and allergens more effectively than Plasma Quad. It can also capture PM2.5 and particles smaller than 2.5µm, creating healthy living spaces

### Bacteria

<LN series> Neutralizes 99% of Staphylococcus aureus in 162 minutes in a 25 m<sup>3</sup>

<sup>\*8</sup> The test was conducted on the Plasma Quad device alone, not designed to evaluate product performance. \*9 The result without the effect of natural attenuation is 96.3%.
\*10 The result is based on the test with a device installed on the representative indoor unit. (MSZ-AP series) \*11 It shows the result when allergen and dust pass through the device once.

# **AIR QUALITY**

### Self Clean mode

When Self Clean Mode is activated, fan operation starts after cooling/dry mode. This operation helps to dry inside indoor unit to prevent molds and odors. You can feel the clean air without frequent cleaning by yourself.

1 High humidity inside the unit, which can lead to mold growth and odors.

2 Airflow operation suppresses mycelial growth.

3 Maintains clean unit interior.

### **Filters & Cleaning Functions**

### Fresh-air Intake

Indoor air quality is enhanced by the direct intake of fresh exterior air.

### High-efficiency Filter

This high-performance filter has a much finer mesh compared to standard filters, and is capable of capturing minute particulates floating in the air that were not previously caught.

### Air Purifying Filter

The filter has a large capture area and also generates antibacterial, antifungal, and deodorant effects.

### Oil Mist Filter

The oil mist filter prevents oil mist from penetrating into the inner part of the air conditioner.

### Long-life Filter

A special process for the entrapment surface improves the filtering effect, making the maintenance cycle longer than that of units equipped with conventional filters.

### Filter Check Signal

Air conditioner operating time is monitored, and the user is notified when filter maintenance is necessary.

### Silver-ion

### Silver-ionized Air Purifier Filter

Silver-ionized Air Purifier Filter made of non-woven fabric can capture tiny particles. Silver ions and enzymes contained in the filter effectively act on bacteria and allergens and neutralises them.

### Dual Barrier Coating

### **Dual Barrier Coating**

A two-barrier coating which prevents hydrophobic and hydrophillic dirt from sticking to the inner surface and inner parts of the indoor unit

### Dual Barrier Coating

### Dual Barrier Material

Antifouling materials are kneaded into horizontal vane and vertical vane, preventing dust and greasy dirt accumulating on the surface of indoor unit.

### **Deodorising Filter**

The catalyst in the Deodorising Filter denatures the odorous components and destroys them from the source of the odour, quickly delivering fresh air to your room.

### V Blocking Filter

V Blocking Filter with antiviral effect inhibits 99% of adhered virus, and other harmful substances, such as bacteria, mold and allergen. Two-layered filter with non-woven fabric and electrostatic filter can effectively capture and remove small particles from the air in your room.

# **AIR QUALITY**

Provide clean air and protection for your indoor air quality around the clock without taking up floorspace.

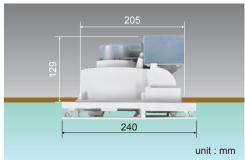

### Plasma Quad Technology

Plasma Quad technology was developed by Mitsubishi Electric in 2012. It suppresses airborne viruses, bacteria and allergens as they pass through an electrical field that is generated by applying DC voltage to a discharger comprising a discharging electrode and counter electrode.

### Simple & Floorspace-saving Installation

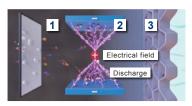

No duct work is needed, and no floorspace is taken up.

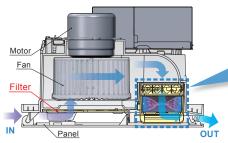

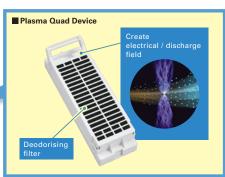

### Structure

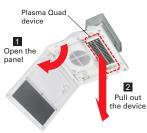

- Large particles are collected by the filter.
- 2 Particles that pass through the filter are suppressed and collected by the Plasma Quad device.
- 3 Clean air is released into the room.

### Maintenance-saving

- Rinse with water or lukewarm water. (Neutral detergent is available)
- Soak the deodorising filter in water for about 30 minutes. (This soaking time is a rough estimate.)

Dual Barrier Coating effectively prevents buildup of dust and dirt in the fan.

■ Comparison of the buildup of dust and dirt containing moisture on fan blades after 10 years of operation. (Test according to Mitsubishi Electric standards)

Without coating

**Dual Barrier Coating** 

### **Specifications**

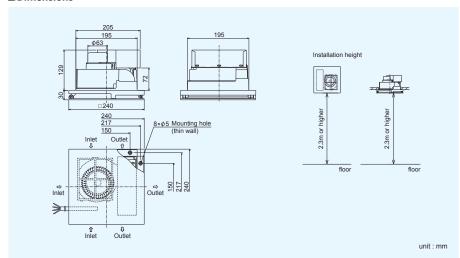

### JC-4K-EU type

### **Key Features**

- -Plasma Quad Device
- -Dual Barrier Coating
- -Low Noise Operation and Energy Efficiency
- -Installed to Ceiling and Wall

- \* 1 It shows the result against the virus attached to the testing equipment which using the plasma quad technology.
  \* 2 The test was conducted on the Plasma Quad device only.It shows the result when allergen pass through the device once.

# **CONVENIENCE**

### **CONVENIENCE**

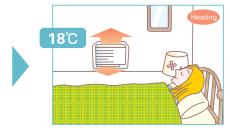

### "i save" Mode

"i save" is a simplified setting function that recalls the preferred (preset) temperature by pressing a single button on the remote controller. Press the same button twice in repetition to immediately return to the previous temperature setting.

Using this function contributes to comfortable waste-free operation, realising the most suitable air conditioning settings and saving on power consumption when, for example, leaving the room or going to bed.

\*Temperature can be preset to 10°C when heating in the "i-save" mode.

### Ç<del>i</del>⋛Ö ACO

### Auto Changeover

The air conditioner automatically switches between heating and cooling modes to maintain the desired temperature.

### Low-temperature Cooling

Intelligent fan speed control in the outdoor unit ensures optimum performance even when the outside temperature is low.

### Ampere Limit Adjustment

Dip switch settings can be used to adjust the maximum electrical current for operation. This function is highly recommended for managing energy costs.

\*Maximum capacity is lowered with the use of this function.

### 🗖 Operation Lock (Indoor unit)

To accommodate specific-use applications, cooling or heating operation can be specified using the wireless remote controller. A convenient option when a system needs to be configured for exclusive cooling or heating service.

### Operation Lock (Outdoor unit)

To accommodate specific-use applications, cooling or heating operation can be specified when setting the control board of the outdoor unit. A convenient option when a system needs to be configured for exclusive cooling or heating service.

### Auto Restart

Especially useful at the time of power outages, the unit turns back on automatically when power is restored.

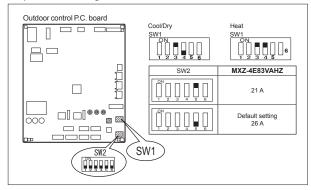

### [28] 10°C

### 10°C Heating

During heating operation, the temperature can be set in 1°C increments down to 10°C.

\*MLZ and MFZ series: Only when using "i-save" mode, the temperature can be set to 10°C, but not in 1°C increments.

### n Dip Switch Setting (Board for MXZ-5E102)

### Night Mode

When Night Mode is activated using the wireless remote controller, it will switch to the settings described below.

- The brightness of the operation indicator lamp will become dimmer.
- The beeping sound will be disabled.
- The outdoor operating noise will drop to 3dB lower than the rated specification operating noise.
- \*The cooling/heating capacity may drop.
- \*Night mode does not function when connected to MXZ.

### Low-noise Operation (Outdoor Unit)

System operation can be adjusted to prioritise less noise from the outdoor unit over air conditioning performance.

### On/Off Operation Timer

Use the remote controller to set the times of turning the air conditioner On/Off.

### **Built-in Weekly Timer Function**

Easily set desired temperatures and operation ON/OFF times to match lifestyle patterns. Reduce wasted energy consumption by using the timer to prevent forgetting to turn off the unit and eliminate temperature setting adjustments.

### Example Operation Pattern (Winter/Heating mode)

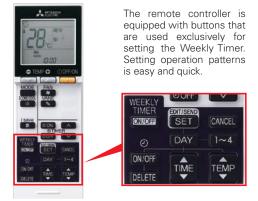

| Automatically changes to high-power operation at wake-up time    10-00   | 20°C                        |
|--|-----------------------------|
| Automatically changes to high-power operation at wake-up time    1000  | 18°C                        |

| Automatically raises temperature   | 22°C                        |
| Automatically turns on, synchronized with arrival at home  Automatically turns on, synchronized with arrival at home  Automatically falses temperature match time when outside-air tem   | etting to<br>erature is low |
|  | 18°C                        |
| Automatically lowers temperature at bedtime for energy-saving operation at night   |                             |

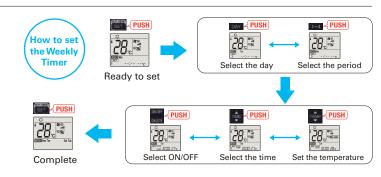

Settings

Pattern Settings: Input up to four settings for each day

Settings: •Start/Stop operation •Temperature setting ]The operation mode cannot be set.

### Easy set-up using dedicated buttons

- · Start by pushing the "SET" button and follow the instructions to set the desired patterns. Start by pushing the "SEI" button and follow the instructions to set the desired patterns. Once all of the desired patterns are input, point the top end of the remote controller at the indoor unit and push the "SET" button one more time. (Push the "SET" button only after inputting all of the desired patterns into the remote controller memory. Pushing the "CANCEL" button will end the set-up process without sending the operation patterns to the indoor unit).
   It takes a few seconds to transmit the Weekly Timer operation patterns to the indoor unit. Please continue to point the remote controller at the indoor unit until all data has been sent.

### **Back Light Remote Controller**

Not only the indoor units, but the wireless remote controllers come in four colours as well. Each remote controller matches the indoor unit. Even the textures are the same.

The setting can be easily checked in the dark.

# INSTALLATION & MAINTENANCE

### INSTALLATION

### Cleaning-free Pipe Reuse

It is possible to reuse the same piping. It allows cleaning-free renewal of air conditioning systems that use R22 or R410 refrigerant.

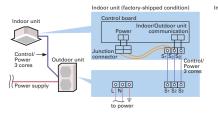

### Wiring Reuse of Existing Wiring

### Wiring recycling problem solved! Compatible with other wiring connection methods\*

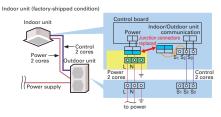

The wiring method has been improved, making it possible to use methods different from that utilized for control and power supply. Units are compatible with the dual harness control line/power line method and the separate power supply method. Using a power supply terminal kit, wire can be efficiently reused at the time of system renewal regardless of the method the existing system uses.

\*Optional. Usage may be limited due to wiring type diameter.

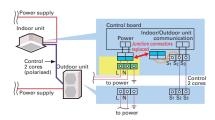

### Single Harness Control/Power Line Method (Current method)

### **Dual Harness Control Line/Power Line Method**

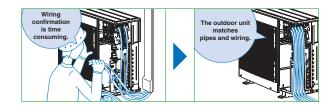

### Separate Power Supply Method

### Wiring/Piping Correction Function\*

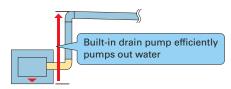

The push of a single button is all that is required to confirm that piping and wiring are properly connected. Corrections are made automatically if a wiring error is detected, eliminating the need for complicated wiring confirmation work when expanding the number of rooms served.

\* This function cannot be used when the outdoor temperature is below 0°C. The correction process requires 10-20 minutes, and only works when the unit is set to the Cooling mode.

### **Drain Pump**

A built-in drain pump enables drain piping to be raised.

Flare connection to cooling pipe work is possible.

### Pump Down Switch

Enables smooth and easy recovery of refrigerant. Simply press the "Pump Down" switch before moving or changing the unit.

### Outdoor unit control circuit board

stop refrigerant recovery operation automatically. (Valve in refrigerant circuit is opened/closed.)

## **MAINTENANCE**

Self-Diagnostic Function (Check Code Display)

Check codes are displayed on the remote controller or the operation indicator to inform the user of malfunctions detected.

Failure Recall Function

Operation failures are recorded, allowing confirmation when needed.

# SYSTEM CONTROL

#### SYSTEM CONTROL

#### PAR-41MAA/PAC-YT52CRA/PAC-CT01MAA

Units are compatible for use with the PAR-41MAA, PAC-YT52CRA or PAC-CT01MAA remote controller, which has a variety of management

### System Group Control

The same remote controller is capable of controlling the operational status of up to 16 refrigerant systems.

#### M-NET Connection

Units can be connected to MELANS system controllers (M-NET controllers) such as the AG-150A.

#### COMPO (Simultaneous Multi-unit Operation)

Multiple indoor units can be connected to a single outdoor unit. (Depending on the unit combination, connection of up to four units is possible; however, all indoor units must operate at the same settings.)

#### **MXZ** Connection

Connection to the MXZ multi-split outdoor unit is possible.

#### MELCloud (Wi-Fi interface)

#### MELCloud for fast, easy remote control and monitoring

MELCloud is a Cloud-based solution for controlling air-conditioner either locally or remotely by computer, tablet or smartphone via the Internet. Setting up and remotely operating via MELCloud is simple and straight forward. All you need is wireless computer connectivity in your home or the building where the air-conditioner is installed and an Internet connection on your mobile or fixed terminal. To set up the system, the router and the Wi-Fi interface must be paired, and this is done simply and quickly using the WPS button found on all mainstream routers.

You can control and check air-conditioner via MELCloud from virtually anywhere an Internet connection is available.

That means, thanks to MELCloud, you can use much more easily and conveniently.

#### Key control and monitoring features

- Turn system on/off
- See status of operating & adjust set point
- 6 Live weather feed from your location Schedule timer - Set 7 day weekly schedule Error status
- Energy Consumption Monitoring

MELCloud uses the MAC-587IF interface

#### Connecting the Wi-Fi interface

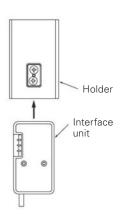

The new Wi-Fi interface MAC-567IF-E can be mounted on the wall or on the outer side of the indoor unit. For LN Series, there is a built-in Wi-Fi interface inside the indoor unit.

#### When mounting on the wall

The interface can be mounted simply by affixing the holder to the wall on either side of the unit and inserting the interface unit into the holder

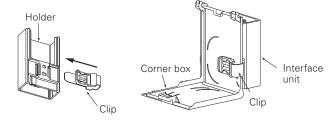

<sup>\*</sup>When mounting on the right side of the unit

#### When mounting on the outer side of the unit

The interface can be mounted on the right side, left side, bottom right, or bottom left of the indoor unit. After inserting the clip into the holder, slip the clip over the edge of the corner box.

Bottom right

Left side

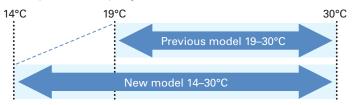

Bottom left

## **CONTROL TECHNOLOGIES**

### Extended cooling set temperature range\*

In environments such as gyms where people do strenuous exercise, even if the room is cooled to an appropriate temperature, people may feel that it is hot, and they need a cooler air. To satisfy such demands, we have extended the lower limit of the cooling set temperature range from 19-30°C. to 14-30°C.

<sup>\*</sup>Insulation kit (PAC-SK36HK-E) is required when indoor unit is PLA series.
\*Availability of this function is depending on outdoor unit, indoor unit and remote controller.

#### Display of model names and serial numbers\*

The model names and serial numbers of the indoor/outdoor units that are connected to the MA smart remote controller can be automatically acquired and displayed through one simple operation. This eliminates the need to directly check each unit and helps with inquiries in the case of an abnormality.

\*Availability of this function is depending on outdoor unit, indoor unit and remote controller.

Model name display (example)

Serial number display (example)

#### Display of power consumption\*

It is possible to measure, acquire, and display the amount of energy used by each air conditioning system.

\*Availability of this function is depending on outdoor unit, indoor unit and remote controller

< Data Collection Period >

Time data: Every 30 minutes over the past month Monthly/daily data: Monthly over the past 14 months Energy consumption values are calculated from estimated power consumption values according to the operating conditions. They may vary from the actual power consumption values. Please note that the power consumption of optional parts is not included except in the case of optional parts that have their power supplied directly by the outdoor unit.

#### Every 30 minutes (example)

### Horizontal airflow settings

The 4-way cassette model with 3D Total Flow system lets you easily set the horizontal airflow direction. This allows you to freely tailor the air conditioning performance according to your particular space and purpose.

\*PLP-P160ELR-E is required to activate this function.

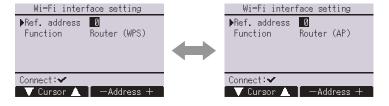

When 3DTotal Flow is equipped

| The horizontal airfl | The horizontal airflow direction can be fixed for each outlet |                    |  |  |  |  |
|----------------------|---|--------------------|--|--|--|--|
| Airflow direct       | ion set (Horiz)   | Default Left       |  |  |  |  |
| 4                    |   | Centre-left Front  |  |  |  |  |
| 3                    |   | Centre-right Right |  |  |  |  |
| Select:✓             |   |                    |  |  |  |  |

#### Wi-Fi interface setting

When setting up a wireless LAN connection, it is now possible to switch between WPS and AP modes via the remote controller. You can configure a wireless network using the most convenient method according to the installation environment.

## Easy To Read & Easy To Use Inverted display screen

The screen background color can be set to black to suit the atmosphere of the installation location.

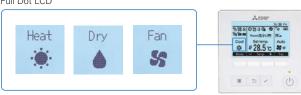

### Full Dot Liquid-crystal Display Adopted

Easier to read thanks to use of a full dot liquid-crystal display with backlight, and easier to use owing to adopting a menu format that has reduced the number of operating buttons.

#### Display Example [Operation Mode]

Full Dot LCD

## Multi-language Display

#### Control panel operation in fourteen different languages

Choose the desired language, among the following languages.

| English   | Spanish | Italian    | Turkish |
|-----------|---------|------------|---------|
| French    | Greek   | Portuguese | Swedish |
| German    | Russian | Polish     | Czech   |
| Hangarian | Dutch   |            |         |

### Temperature Control

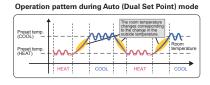

#### Two preset temperatures

When the operation mode is set to the Auto (Dual Set Point) mode, two preset temperatures (one each for cooling and heating) can be set. Depending on the room temperature, indoor unit will

automatically operate in either the COOL or HEAT mode and keep the room temperature within the preset range.

<sup>\*</sup>Please refer to the function list on pages 193-200 for the combination of the available units

### **Energy-efficient Control Operation Control Functions**

#### Precise control of power consumption

The amount of power consumed in each time period is managed so that the demand value is not exceeded. The demand control function can be set to start and finish in 5-minute units.

Additionally, the level can be adjusted to 0, 50, 60, 70, 80 or 90% of maximum capacity, and up to 4 patterns can be set per day. Airconditioning operation is automatically controlled to ensure that electricity in excess of the contracted volume is not consumed.

#### ■ Setting pattern example

| Start time |               | Finish time | Capacity savings |
|------------|---------------|-------------|------------------|
| <br>8:15   | $\rightarrow$ | 12:00       | 80%              |
| 12:00      | $\rightarrow$ | 13:00       | 50%              |
| 13:00      | $\rightarrow$ | 17:00       | 90%              |
| 17:00      | $\rightarrow$ | 21:00       | 50%              |

# Auto-return

#### Prevents wasteful operation by automatically returning to the preset temperature after specified operating time

After adjusting the temperature for initial heating in winter or cooling on a hot summer day, it is easy to forget to return the temperature setting to its original value. The Auto-return function automatically resets the temperature back to the original setting after a specified period of time, thereby preventing overheating/overcooling. The Auto-return activation time can be set in 10-minute units, in a range between 30 and 120 minutes

\*Auto-return cannot be used when Temperature Range Restrictions is in use.

## Auto-off Timer

#### Turns heating/cooling off automatically after preset time elapses

When using Auto-off Timer, even if one forgets to turn off the unit, operation stops automatically after the preset time elapses, thereby preventing wasteful operation. Auto-off Timer can be set in 10minute units, in a range between 30 minutes and 4 hours. Eliminates all anxiety about forgetting to turn off the unit.

Recommended for Meeting room Changing room

## **CONTROL TECHNOLOGIES**

Night Setback

## Keep desired room temperatures automatically

This function monitors the room temperature and automatically activates the heating mode when the temperature drops below the preset minimal temperature setting. It has the same function for cooling, automatically activating the cooling mode when the temperature rises above the preset maximum temperature setting.

## Operation Lock

## Fixed temperature setting promotes energy savings

In addition to operation start/stop, the operation mode, temperature setting and airflow direction can be locked. Unwanted adjustment of temperature settings is prevented and an appropriate temperature is constantly maintained, leading to energy savings. This feature is also useful in preventing erroneous operation or tampering.

Recommended for Office School Public hall
Hospital Computer server facility

Temperature Range Restriction

## Temperature Range Restriction prevents overheating/overcooling

Using a temperature that is 1°C lower/higher for heating/cooling results in a 10% reduction in power consumption.\* Temperature Range Restriction limits the maximum and minimum temperature settings, contributing to the prevention of overheating/overcooling.

\*In-house calculations

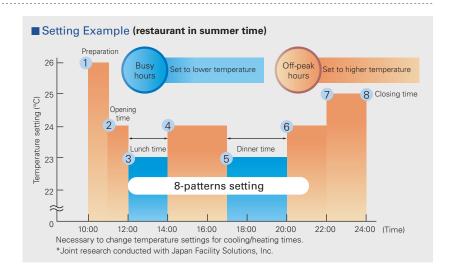

### Weekly Timer

## Weekly Timer with Two Types of Settings

Weekly schedule timer can save two different settings which can be easily switched according to different seasons.

In addition, it offers eight different pattern setting per day. (on, off and temperature setting)

\*Weekly Timer cannot be used when On/Off Timer is in use.

#### Installation/Maintenance Support Functions

Outdoor unit data accessed immediately, enabling fast maintenance (only PUZ/PUHZ type)

Using the Stable Operation Control (fixed frequency) of the Smooth Maintenance function, the operating status of the inverter can be checked easily via the screen on the remote controller

#### ■ Smooth Maintenance Function Operating Procedure

| Heating | Temp. difference | (⑥ OU TH4 temp.) – (⑩IU HEX temp.)           |
|         |                  | (1) IU HEX temp.) – (9) IU air temp.)        |

| Normal                                     | Normal operating status.                               |
|--|--|
| Filter inspection Filter may be blocked.*1 |  |
| Inspection A                               | Capacity is reduced. Detailed inspection is necessary. |
| Inspection B                               | Refrigerant level is low.                              |
| Inspection C                               | Filter or indoor unit heat exchanger is blocked.       |

- \*1: Due to indoor and outdoor temperatures, "Filter inspection" may be displayed even if the filter is
- The above graphs are based on trial data. Results may vary depending on installation/temperature conditions
- Stable operation may not be possible under the following temperature conditions:a) In cooling mode when the outdoor induction temperature is over 40°C or the indoor induction temperature is below 23°C. b) In heating mode when the outdoor induction temperature is over 20°C or when the indoor induction temperature is over 25°C.
- If the above temperature conditions do not apply and stable operation is not achieved after 30 minutes has passed, please inspect the units
   The operating status may change due to frost on the outdoor heat exchanger.

Manual Vane Angle Setting

Direction of vertical airflow for each vane can be set

Setting the vertical airflow direction for each individual vane can be performed simply via illustrated display. Seasonal settings such as switching between cooling and heating are easily changed as well.

Three outdoor noise level setting

The outdoor noise level can be reduced on demand according to the surrounding environment. Select from three setting mode: standard mode (rated), silent mode and ultra-silent mode.

Autodescending Panel Operation

Easily raise/lower panels using the remote controller

Auto-descending panel operation is available as an option. Panels can be raise/lower using a button on the wired remote controller. Filter cleaning can be performed easily.

Initial Password Setting

Password for initial settings

A password is required (default setting is "0000") for initial settings such as time and display language.

# Simple MA Remote Controller PAC-YT52CRA

#### **Backlit LCD**

Features a liquid-crystal display (LCD) with backlight for operation in dark conditions.

### Flat Back

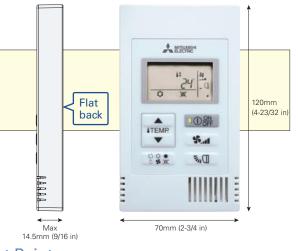

The slim and flat-back shape makes installation easier without requiring a hole in the wall. Thickness is 14.5mm or less.

#### Vane Angle Setting

The vane button has been added to allow users to change the airflow direction (ceiling-cassette and wall-mounted units).

Pressing the [3] button will switch the vane direction.

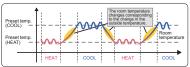

### **Dual Set Point**

#### Two preset temperatures

When the operation mode is set to the Auto (Dual Set Point) mode, two preset temperatures (one each for cooling and heating) can be set. Depending on the room temperature, indoor unit will automatically operate in either the COOL or HEAT mode and keep the room temperature within the preset range.

#### Operation pattern during Auto (Dual Set Point) mode

- \*Please refer to the function list on pages 193-200 for the combination of the available units.
- \* The settable vane directions vary depending on the indoor unit model to be connected.
- \* If the unit has no vane function, the vane direction cannot be set. In this case, the vane icon flashes when the 🏾 📆 🗎 button is pressed.

**Operation panels** 

Flexibility Customized display, color on parameter and background, editable parameter, logo image on the initial display

#### Multiple color pattern

180 color patterns can be selected for control parameters or background on the display.

#### Control parameter customize

Users can customize the panel to display the selected parameters only.

#### Control parameter customize

Simple operation panel is preferred by users, especially in hotels. It is available to display only ON/OFF, set temp., fan speed.

#### Logo image customization

Logo image can be displayed on the initial screen

#### Available in a wide variety of colors to suit the decor of any room.

## **Expandability** Smartphone / tablet App is available for setting, customize, and control.

#### Bluetooth® low energy technology

Remote controller can communicate with smartphone or tablet device via Bluetooth Low Energy (BLE). Operation & Setting App are available on the App store.

- \*The Bluetooth® word mark is trademark of Bluetooth SIG, Inc., USA.
- \*Contact the sales company for information on "Bluetooth" function.

#### Convenient BLE transmission functions for installation contractors

Initial setup for the remote controller can be easily performed using BLE transmission via a smartphone.

#### Previous model

Previously, initial setup (selecting function parameters) was only available via the remote controller installed each room.

The initial setup (selecting function parameters) can now be performed in advance on a smartphone, with the settings transmitted to the remote controller by enabling BLE transmission upon entry to the room.

#### Convenient BLE transmission functions for guests

The remote controller has been further upgraded with hotels in mind, to allow smartphone connectivity and multilingual support.

#### Smartphone connectivity

For example, hotel guests can operate the air conditioner via their smartphones, without getting out of bed.

#### Multilingual support

The smartphone app can be displayed in the language that the guest's smartphone is set to.

## **CONTROL TECHNOLOGIES**

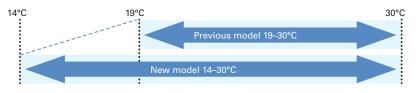

# Wireless Remote Controller PAR-SL101A-E

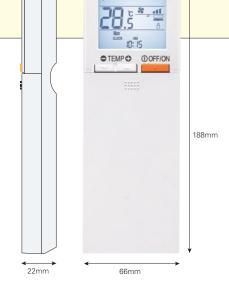

### Extended cooling set temperature range\*

In environments such as gyms where people do strenuous exercise, even if the room is cooled to an appropriate temperature, people may feel that it is hot, and they need a cooler air. To satisfy such demands, we have extended the lower limit of the cooling set temperature range from 19–30°C. to 14–30°C.

\*Insulation kit (PAC-SK36HK-E) is required when indoor unit is PLA series. \*Availability of this function is depending on outdoor unit, indoor unit and remote controller.

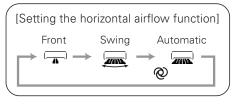

A MISLESH

### Horizontal airflow settings

## Backlight

Backlight function incorporated, making screen easy to read in the dark. Even in dimly lit rooms, the screen can be seen clearly for trouble-free remote controller operation.

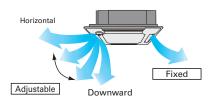

## **Individual Vane Settings**

The airflow directions of the four vanes can each be adjusted independently. Easily set the optimum airflow according to the room setting.

### **Battery Replacement Sign**

Previous wireless remote controllers were not easy to read, understand or use sometimes because the battery was low. Beginning with the PAR-SL101A-E, a battery charge indicator that shows the charge status is included in the LCD so it can be seen when the battery is low and needs to be changed.

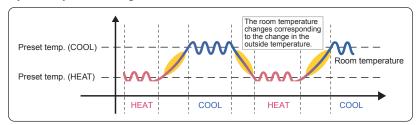

#### **Dual Set Point**

When the operation mode is set to the Auto (Dual Set Point) mode, two preset temperatures (one each for cooling and heating) can be set. Depending on the room temperature, the indoor unit will automatically operate in either the COOL or HEAT mode and keep the room temperature within the preset range.

#### Operation pattern during Auto (Dual Set Point) mode

<sup>\*</sup> Only available for compatible models.

### 3D i-see Sensor (Direct/Indirect Airflow)

Pressing the i-see button enables direct or indirect setting of all vanes.

\*Only available for models equipped with 3D i-see Sensor.

<sup>\*1</sup> Only VGKP model.

\*2 Equipped as standard for VGK model.

\*3 Available only for Scandinavian model.

\*4 When multiple indoor units connected to an MXZ outdoor unit are running at the same time, simultaneous cooling and heating is not possible.

\*5 Please refer to "System Control" on pages for details.

\*6 Only VGK model.

<sup>1</sup> SLZ-M15 can be connected with R32 MXZ only.

12 This function is only available with PAR-41MAA, PAC-YT52CRA, PAR-SL101A-E.

13 Please refer to "System Control" on pages for details.

14 Please refer to page 57 for details.

15 PEAD-M JAL are not equipped with a drain pump.

<sup>If a numerical figure is listed, the feature is only available with the outdoor unit of that capacity.
Opt: Optional parts must be purchased.</sup>

<sup>\*1</sup> When multiple indoor units connected to an MXZ outdoor unit are running at the same time, simultaneous cooling and heating is not possible.

\*2 For the possible connectivity of MXZ outdoor units and indoor units, please refer to the list on pages 139-140 for details.

\*3 Please refer to "System Control" on pages for details.

## Major Optional Parts

| Part Name   | Description   | Part Name   | Description                                |
|---|---|---|--|
| Plasma Quad Connect High performance air purifying device that effectively removes various kinds of air pollutants and is even installable on the existing indoor unit. | Plasma Quad Connect   | Multi-functional Casement Casement for fresh-air intake and attaching the high-efficiency filter element (optional).  | Indoor unit body Multi-functional casement |
| Deodorising Filter Captures small foul-smelling substances in the air.  | Deodorising filter  | Fresh-air Intake Duct Flange Flange attachment for adding a duct to take in fresh air from outside.   | *For 4-way cassette units (PLA)            |
| Air-cleaning Filter Removes fine dust particles from the air by means of static electricity.  | Air-cleaning filter   | Space Panel Decorative cover for the installation when the ceiling height is low.   | Space Panel Panel                          |
| V Blocking Filter Inhibits 99% of adhered virus, and other harmful substances, such as bacteria, mold and allergen.   | V Blocking Filter   | Drain Pump Pumps drain water to a point higher than that where the unit is installed.   | *for ceiling-suspended units               |
| Silver-ionized Air Purifier Filter Captures the bacteria, pollen and other allergens in the air and neutralises them.   | Silver-ionized Air Purifier Filter  | Decorative Cover  To be attached to the upper section of ceiling- suspended models for professional kitchen use. Helps prevent dust accumulation.                                       | Decorative cover                           |
| Oil Mist Filter Element Filter element (12 pieces) that blocks the oil mist for ceiling-suspended models used in professional kitchens.                                 | Filter frame Filter element   | MA Interface Interface for connecting with the PAR-41MAA remote controller and PAC-YT52CRA.   | MA & contact terminal interface            |
| High-efficiency Filter Element Element for high-efficiency filter. Removes fine dust particles from the air.  | Plug (for directing airliow)  High-efficiency filter element  *For 4-way cassette units (PLA) | System Control Interface Interface to connect with M-NET controllers.   | System control interface                   |
| 3D i-see Sensor Corner Panel for SLZ Corner panel holding the 3D i-see Sensor.  | i-see Sensor corner panel   | Wi-Fi Interface Interface enabling users to control air conditioners and check operating status via devices such as personal computers, tablets and smartphones.                        | W/Fi interface Indoor unit Smartphone      |
| <b>3D Total Flow for PLA</b> Casement equipped with horizontal louver.  |   | Connector Cable  This product is an adaptor which inputs the incoming signals from an open/close switch to the air conditioner and outputs the on/off signals from the air conditioner. | Switch Indoor unit                         |
| 3D i-see Sensor Corner Panel for PLA Corner panel holding the 3D i-see Sensor.  | i-see Sensor<br>corner panel  | Power Supply Terminal Kit Terminal bed to change the power supply from outdoor power supply to separate indoor/ outdoor power supplies.   |  |
| Shutter Plate Plate for blocking an air outlet of the 4-way cassette (PLA) indoor unit.   | Shutter Plate   | Wired Remote Controller  Advanced deluxe remote controller with full- dot liquid-crystal display and backlight.  Equipped with convenient functions like night- setback.                | Anni                                       |

| Part Name  | Description   |
|--|---|
| MA Touch Remote Controller Remote controller with the full color touch display. Smartphone/Tublet App is available for setting, customize and control.   |   |
| Simple Wired Remote Controller<br>Remote controller with liquid-crystal display,<br>and backlight function for operation in dark<br>location.  | Army  |
| Remote Controller Terminal Block Kit for PKA  The terminal block is used as a relay to wire an indoor unit and to two remote controllers or to wire a remote controller and multiple indoor units in order to perform group control. |   |
| Wireless Remote Controller Signal Sender Handheld unit for sending operation signals to the indoor unit.   | Handheld unit   |
| Wireless Remote Controller Signal Receiver Receives operation signals from the wireless remote controller handheld unit.   | Signal receiver   |
| Wireless Remote Controller Kit (Sender & Receiver) Remote controller handheld unit (signal sender) and receiver (signal receiver) for ceiling-suspended units.   | Signal receiver   |
| Control Holder Holder for storing the remote controller.   | Control holder  |
| Remote Sensor Sensor to detect the room temperature at remote positions.   | Remote sensor   |
| Remote On/Off Adapter Connector for receiving signals from the local system to control the on/off function.  | Remote on/off adapter   |
| Remote Operation Adapter Adapter to display the operation status and control on/off function from a distance.  | Remote operation adapter  |
| Connector Cable for Remote Display Connector used to display the operation status and control on/off function from a distance.   | Connector cable for remote display  Brown Red Orange Yellow Green       |
| <b>Distribution Pipe</b> Branch pipe for P Series simultaneous multi- system use, or to connect two branch boxes for PUMY.   | Indoor unit Indoor unit Distribution pipe 'P Series with 2 indoor units |

\*P Series with 2 indoor units

| Part Name  | Description  |
|--|--|
| Joint Pipe Part for connecting refrigerant pipes of different diametres.   | Joint pipe Onsite pipe Indoor unit Insulator Outdoor unit                      |
| Liquid Refrigerant Dryer Removes water and minute particles from refrigerant pipes.  |  |
| Branch Box Outer Cover Casement for branch boxes.  | Complete view  Branch box outer cover  |
| Air Discharge Guide Changes the direction of air being exhausted from the outdoor unit.  |  |
| Air Protection Guide Protects the outdoor unit from the wind.  |  |
| Drain Socket  A set of caps to cover unnecessary holes at the bottom of the outdoor unit, and a socket to guide drain water to the local drain pipe. | Cap  |
| Centralised Drain Pan Catches drain water generated by the outdoor unit.   | Outdoor unit Centralised drain pan Base (local construction)                   |
| M-NET Converter Used to connect P Series A-control models to M-NET controllers.  | Group remote controller  M.NET Converteer  Four rapply unit for transmit coble |
| Control/Service Tool  Monitoring tool to display operation and self-diagnosis data.  | Control/service tool   |
| Step Interface Interface for adjusting the capacity of inverter- equipped outdoor units.   | Case interior  |
| High-static Fan Motor Static pressure enhanced up to +30pa.  |  |
|  |  |

## Optional Parts List <Indoor>

<sup>\*1</sup> Equipped as standard for VGK model.
\*2 Plasma quad plus is equipped as standard for VGKP model.
\*3 Outside attachment only.
\*4 Either MAC-334IF-E or MAC-497IF-E is required. Up to two wired remote controllers can be connected at the same time.
\*5 Either MAC-334IF-E or MAC-497IF-E is required. Only one wired remote controller can be connected.
\*6 Available only for LN18/25/35/50/60VG2W.

<sup>\*1</sup> High-efficiency filter element (PAC-SH59KF-E) cannot be used with 3D Total Flow unit (PLP-U160ELR-E), Plasma Quad Connect (PAC-SK51FT-E), Insulation kit (PAC-SK36HK-E) and V Blocking Filter (PAC-SK33KF-E).

\*2 High-efficiency filter element (PAC-SH88KF-E) cannot be used with V Blocking Filter (PAC-SH88KF-E).

\*3 High-efficiency filter element (PAC-SH88KF-E) cannot be used with V Blocking Filter (PAC-SH88KF-E).

\*4 High-efficiency filter element (PAC-SH90KF-E) cannot be used with V Blocking Filter (PAC-SH90KF-E).

\*5 V Blocking Filter (PAC-SK53KF-E) cannot be used with High-efficiency filter element (PAC-SH90KF-E).

\*6 V Blocking Filter (PAC-SK55KF-E) cannot be used with High-efficiency filter element (PAC-SH88KF-E).

\*7 V Blocking Filter (PAC-SK55KF-E) cannot be used with High-efficiency filter element (PAC-SH89KF-E).

\*8 V Blocking Filter (PAC-SK57KF-E) cannot be used with High-efficiency filter element (PAC-SH89KF-E).

\*9 Plasma Quad Connect (PAC-SK51FT-E) cannot be used with PLP-U160ELR-E (3D Total Flow unit), Insulation kit (PAC-SK36HK-E), Auto elevation panel (PLP-6EAJ, PLP-6EAJE), Multi functional casement (PAC-SJ41TM-E) and High-efficiency filter element (PAC-SH59KF-E).

#### **MXZ** SERIES

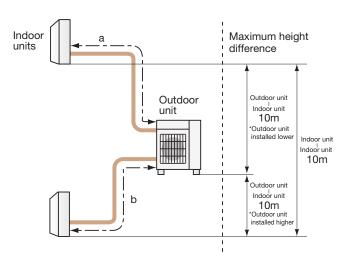

#### MXZ-2D33VA, MXZ-2F33VF4

| Maximum Piping Length            |     |
|----------------------------------|-----|
| Outdoor unit - Indoor unit (a,b) | 15m |
| Total length (a+b)               | 20m |

| Maximum Number of Bends          |    |
|----------------------------------|----|
| Outdoor unit - Indoor unit (a,b) | 15 |
| Total number (a+b)               | 20 |

<sup>\*</sup> When connecting MFZ-KJ Series indoor unit, additional refrigerant is required. For details, please contact Mitsubishi Electric.

Regarding MXZ-2D33, the second unit should be a different type in the case of selecting one MFZ-KJ.

#### MXZ-2D42VA2. MXZ-2F42VF4

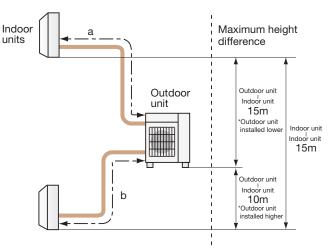

| Maximum Piping Length            |     |
|----------------------------------|-----|
| Outdoor unit - Indoor unit (a,b) | 20m |
| Total length (a+b)               | 30m |

| Maximum Number of Bends          |    |
|----------------------------------|----|
| Outdoor unit - Indoor unit (a,b) | 20 |
| Total number (a+b)               | 30 |

#### MXZ-2D53VA(H)2, MXZ-2E53VAHZ, MXZ-2F53VF(H)4

| Maximum Piping Length            |     |  |
|----------------------------------|-----|--|
| Outdoor unit - Indoor unit (a,b) | 20m |  |
| Total length (a+b)               | 30m |  |

| Maximum Number of Bends          |    |
|----------------------------------|----|
| Outdoor unit - Indoor unit (a,b) | 20 |
| Total number (a+b)               | 30 |

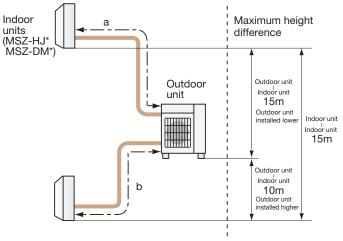

\* When connecting MFZ-KJ Series indoor unit to MXZ-2D42VA2 or MXZ-2D53VA(H)2, additional refrigerant is required. For details, please contact Mitsubishi Electric.

#### **MXZ** SERIES

#### MXZ-2DM40VA, MXZ-2HA40VF2, MXZ-2HA50VF2

| Maximum Piping Length            |     |
|----------------------------------|-----|
| Outdoor unit - Indoor unit (a,b) | 20m |
| Total length (a+b)               | 30m |

| Maximum Number of Bends          |    |
|----------------------------------|----|
| Outdoor unit - Indoor unit (a,b) | 20 |
| Total number (a+b)               | 30 |

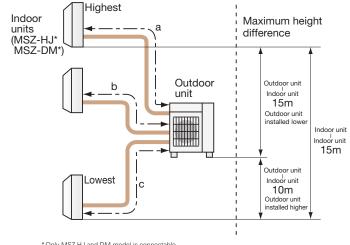

\*Only MSZ-HJ and DM model is connectable.

#### MXZ-3DM50VA, MXZ-3HA50VF2

| Maximum Piping Length              |     |
|------------------------------------|-----|
| Outdoor unit - Indoor unit (a,b,c) | 25m |
| Total length (a+b+c)               | 50m |

| Maximum Number of Bends               |    |
|---------------------------------------|----|
| Outdoor unit - Indoor unit (a,b,c) 25 |    |
| Total number (a+b+c)                  | 50 |

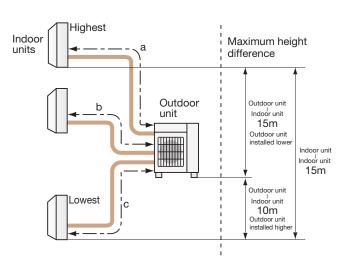

<sup>\*</sup>Only MSZ-HJ and DM model is connectable.

#### MXZ-3E54VA, MXZ-3F54VF4

#### **Explanation of Terminology**

#### Maximum piping length:

This is the maximum allowable length of the refrigerant piping. The amount of refrigerant pipe used cannot be longer than the length specified.

#### **Total length:**

The maximum allowable combined length of all the refrigerant piping between the outdoor unit and indoor unit(s).

#### **Outdoor Unit - Indoor Unit:**

The maximum allowable length of the refrigerant piping between the outdoor unit and indoor units installed when multiple units are connected to a single outdoor unit. This distance limitation refers to the maximum length between the outdoor unit and the farthest indoor unit.

#### Pipe length difference from distribution pipe:

The maximum allowable difference in refrigerant piping length from the distribution pipe to the farthest indoor unit and from the distribution pipe to the closest indoor unit when multiple indoor units are connected to a single outdoor unit using a distribution pipe.

#### **Indoor Unit - Distribution Pipe:**

The maximum allowable length of the refrigerant piping between indoor units and the distribution pipe when multiple indoor units are connected to a single outdoor unit.

#### Maximum height difference:

This is the maximum allowable height difference. It is necessary to install the air conditioning system so that the height distance is no more than the difference specified. (Specified differences may vary if the outdoor unit is installed higher or lower than the indoor units).

#### Outdoor unit - Indoor unit:

The maximum allowable difference in height between the outdoor unit and indoor units when installed (when multiple indoor units are connected to a single outdoor unit, this distance limitation refers to the maximum height difference between the outdoor unit and an indoor unit)

#### Indoor unit - Indoor unit:

The maximum allowable difference between the heights of indoor units when multiple indoor units are connected to a single outdoor unit.

#### Maximum number of bends:

This is the maximum allowable number of bends in the refrigerant piping. The total number of bends in the refrigerant piping used cannot exceed the number specified.

#### Total number:

The maximum allowable number of bends for all refrigerant piping between the outdoor unit and indoor units.

#### Outdoor unit - Indoor unit:

The maximum allowable number of bends between the outdoor unit and each indoor unit when multiple indoor units are connected to a single outdoor unit.

## Conditions for specifications

Temperature conditions are based on JIS B8616.

|         | Cooling  | Indoor           | 27°C DB, 19°C WB |
|---------|----------|------------------|------------------|
| Cooming | Outdoor  | 35°C DB, 24°C WB |                  |
|         | Heating  | Indoor           | 20°C DB          |
|         | rieating | Outdoor          | 7°C DB, 6°C WB   |

#### Refrigerant piping length; 5m

The figures for total input are based on the following voltages.

| Series   | Indoor unit           | Outdoor unit  |  |  |
|--|-----------------------|---|--|--|
| M Series S Series P Series (except for PEA) MXZ Series POWERFUL HEATING Series | -                     | VF, VG, VE, VA, VHA, VKA: 230V/Single phase/50Hz<br>YA, YHA, YKA: 400V/Three phase/50Hz |  |  |
| PEA Series   | 400V/Three phase/50Hz | 400V/Three phase/50Hz   |  |  |

#### Sound pressure level

- The sound pressure measurement is conducted in an anechoic chamber.
- The actual sound level depends on the distance from the unit and the acoustic environment.

#### How to read a model name

#### 1) M & S Series

| ., 🔍 | 0 001100  |

# R32 REFRIGERANT

#### **R32 REFRIGERANT PROPERTIES**

Under the conditions shown below, there is a possibility that R32 could ignite.

|                                   | R32                            | R410A  | R22                      |
|-----------------------------------|--------------------------------|--|--------------------------|
| Chemical formula                  | CH <sub>2</sub> F <sub>2</sub> | CH <sub>2</sub> F <sub>2</sub> /CHF <sub>2</sub> CF <sub>3</sub> | CHCIF2                   |
| Composition (blend ratio wt. %)   | Single composition             | R32/R125<br>(50/50 wt %)   | Single composition       |
| Ozone depletion potential (ODP)   | 0                              | 0  | 0.055                    |
| Global warming potential (GWP) *1 | 675                            | 2088   | 1810                     |
| LFL(vol.%) *2                     | 13.3                           | _  | -                        |
| UFL(vol.%) *3                     | 29.3                           | -  | _                        |
| Flammability *4                   | Lower flammability (2L)        | No flame propagation (1)   | No flame propagation (1) |

<sup>\*1</sup> IPCC 4th assessment report.

Although R32 is classified as low flammability, the possibility of igniting can be eliminated by ensuring the following three points.

#### WARNING

#### a) Do not leak refrigerant.

<Installation> ·Vacuum drying should be done. Air purging is prohibited.

·Follow "4. Installation Points of Refrigerant Piping Work".

<Repair/Relocation/Removal> · Pump down or recovering refrigerant should be done.

#### b) Prevent concentration.

·Ventilate during installation and servicing, such as open the door or window and use a fan.

·Follow "2. Installation Restrictions".

#### c) Keep ignition source away from the unit.

·Do not braze pipe and unit which contain refrigerant. Before brazing, refrigerant should be recovered.

Do not install unit while the electricity is turned on. Turn off electricity at the fuse box and check the wiring using a tester.

Do not smoke when working or during transportation of the product.

Both R32 / R410A emit a toxic gas when coming into contact with an open flame.

<sup>\*2</sup> LFL : Lower flammable limit

<sup>\*3</sup> UFL: Upper flammable limit

<sup>\*4</sup> ISO 817:2014

<sup>\*5</sup> R32 consistency is higher than LFL\*1 and lower than UFL\*2.

#### INSTALLATION RESTRICTIONS

In order to prevent the refrigerant from igniting, use the following instructions during installation.

#### 1) Indoor Units

Install in a room with a floor area of Amin\* or more, corresponding to refrigerant quantity M.

(M = factory-charged refrigerant + locally added refrigerant)

Install the indoor unit so that the height from the floor to the bottom of the indoor unit is  $hO^{\ast}$ .

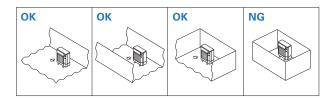

\* Refer to table and drawings below.

suspended, cassette and concealed ②For floor-standing (PSA-M)

#### 2) Outdoor Units

Install outdoor units in a place where at least one of the four sides is open or in a sufficiently large space without depressions.

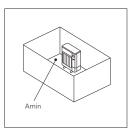

It you unavoidably install a unit in a space where all four sides are blocked or there are depressions, confirm that one of these situations (A, B or C) is satisfied.

## A Secure sufficient installation space (minimum installation area Amin).

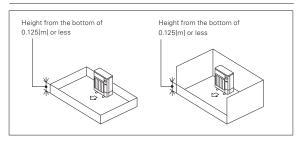

Install in a space with an installation area of Amin\* or more, corresponding to refrigerant quantity M. (M = factory-charged refrigerant + locally added refrigerant)

\* Refer to table and drawings below.

| M[kg] | Amin[m²] |
|-------|----------|
| 1.0   | 12       |
| 1.5   | 17       |
| 2.0   | 23       |
| 2.5   | 28       |
| 3.0   | 34       |
| 3.5   | 39       |
| 4.0   | 45       |
| 4.5   | 50       |
| 5.0   | 56       |
| 5.5   | 62       |
| 6.0   | 67       |
| 6.5   | 73       |
| 7.0   | 78       |
| 7.5   | 84       |
| 8.0   | 89       |
| 8.5   | 95       |
| 9.0   | 100      |
| 9.5   | 106      |

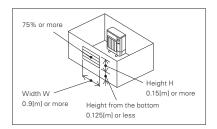

#### **B** Install in a space with a depression height of $\leq 0.125$ [m].

#### Create an appropriate open ventilation area.

Make sure that the width of the open area is 0.9[m] or more and the height of the open area is 0.15[m] or more.

However, the height from the bottom of the installation space to the bottom edge of the open area should be 0.125[m] or less. More than 75% of the ventilation area should be open to allow air circulation.

Note These countermeasures (A, B or C) are for keeping safety not for specification guarantee.

• Models with R32 Refrigerant: MSZ-L Series (single connection)

# OSSNAY SYSTEM

## **SELECTION**

LOSSNAY lineup consists of two types of ventilation: Energy Recovery Ventilation (ERV) and Heat Recovery Ventilation (HRV). Choose the model that best matches your building layout and indoor environment.

# **Commercial Use LOSSNAY**

Mitsubishi Electric offers Energy Recovery Ventilation and Heat Recovery Ventilation solutions for optimizing building air quality by LOSSNAY

#### **Energy Recovery Ventilation**

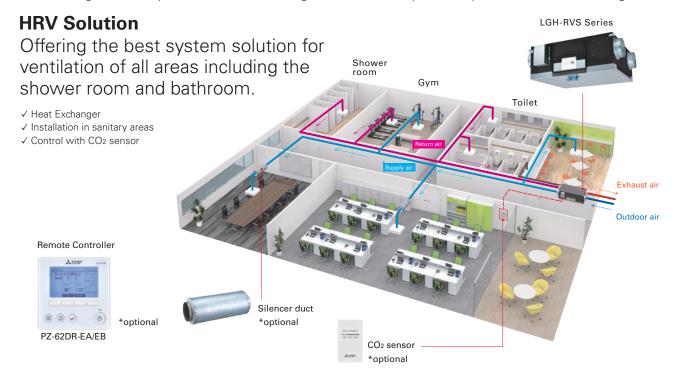

A total heat exchange ventilation system that uses paper characteristics (LOSSNAY core) to perform temperature (sensible heat) and humidity (latent heat) exchange.

#### **ERV Solution**

#### **Heat Recovery Ventilation**

A heat exchange ventilation system that uses a heat exchanger (LOSSNAY core) to perform temperature (sensible heat) exchange.

# Residential Use LOSSNAY

Mitsubishi Electric offers you decentralized ventilation and centralized ventilation solutions for optimizing your indoor air quality by LOSSNAY.

#### **Heat Recovery Ventilation**

A heat exchange ventilation system that uses a heat exchanger (LOSSNAY core) to perform temperature (sensible heat) exchange.

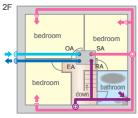

#### Centralized Ventilation Solution

One LOSSNAY unit provides 24-hour ventilation for the entire house, from living room and bedrooms to the bathroom. The heat recovery system provides fresh air at a comfortable air temperature. A sensible heat exchanger effectively

- √ Whole-house Solution
- ✓ Air Purification
- ✓ Quiet Operation

#### **Energy Recovery Ventilation**

A total heat exchange ventilation system that uses paper characteristics (LOSSNAY Core) to perform temperature (Sensible heat) and humidity (latent heat) exchange.

#### **Decentralized Ventilation Solution**

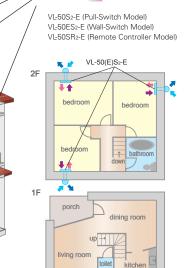

Install the wall-mounted LOSSNAY in each room. The heat recovery system provides fresh air at a comfortable air temperature. Total heat exchangers effectively reduce heat loss.

- √ Total Heat Exchanger
- ✓ Individual Ventilation
- √ Flexible Installation
- √ Easy Maintenance
- √ Stylish Design

VL-100EU5-E (Wall-Switch Model)

VL-100(E)U₅-E

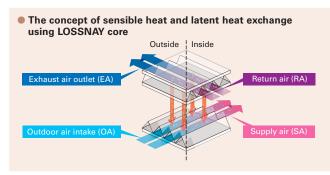

# LOSSNAY

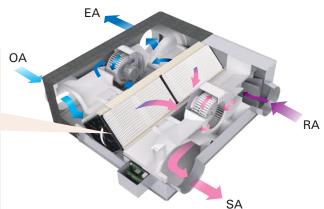

LOSSNAY ventilation systems are renowned industry-wide for their efficiency. They offer environment-friendly energy recovery and humidity control, and enable air conditioning systems to simultaneously provide optimum room comfort and energy savings.

## Indoor air quality inside a building is optimized through temperature and humidity exchange by LOSSNAY

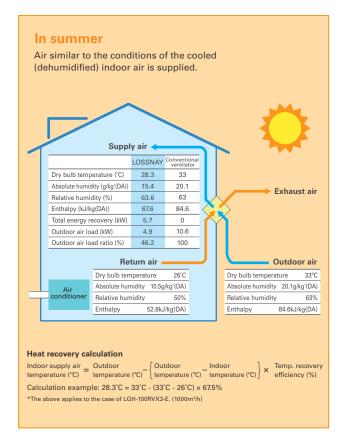

LOSSNAY is a total heat exchange ventilation system that uses paper characteristics to perform temperature (sensible heat) and humidity (latent heat) exchange.

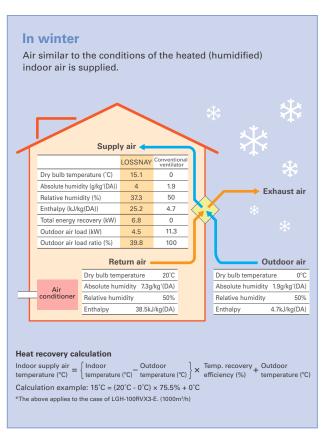

#### What can be improved by introducing LOSSNAY?

Ventilation with maximized comfort

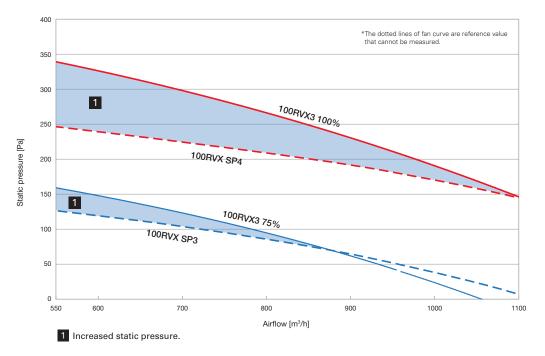

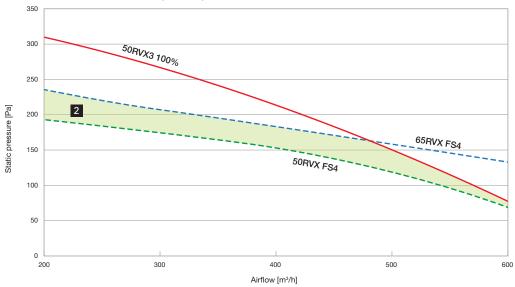

## **Four Key Features**

### High static pressure

External static pressure has been improved compared to previous models. Accompanying this increase in external static pressure, the selection range of models and filters has also expanded. Furthermore, flexible duct work becomes possible.

Smaller models can be chosen compared to previous models.

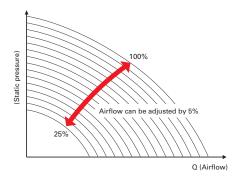

Where 65RVX had to be chosen previously, 50RVX3 (one size down) may now be chosen, owing to its increased external static pressure.

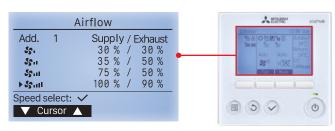

#### Controllability

#### 1. Improved airflow range

#### Variable air control

The default fan speed value (Fan speed 1: 25%, Fan speed 2: 50%, Fan speed 3: 75%, and Fan speed 4: 100%) of both supply air and exhaust air can be adjusted flexibly. Within the range between 25% and 100%, airflow can be adjusted by 5% increments to satisfactorily meet the designed airflow rate.

PZ-62DR-EA/EB

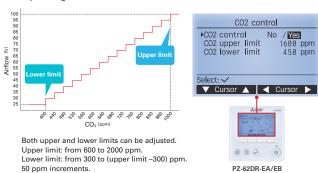

#### 2. New CO<sub>2</sub> sensor

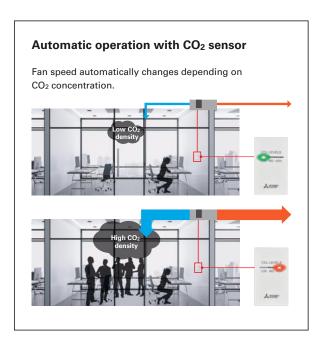

A CO<sub>2</sub> sensor connected directly to a LOSSNAY RVX3 unit optimizes the fan speed according to the levels of CO<sub>2</sub> detected. It improves total heat exchange efficiency and contributes to energy savings.

Two types of  $CO_2$  sensors are available: wall-mounted and duct-mounted types. Power is supplied to the  $CO_2$  sensor from the Lossnay board.

Fan speed automatically changes from 25% to 100% (16 steps) depending on the level of  $CO_2$  concentration.

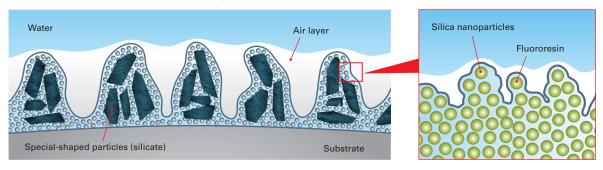

#### **Dual barrier coating**

A water-repellent effect is achieved by creating a coating film that has nano-sized concave-convex structures formed by silica nanoparticles made of water-repellent fluororesin and micron-sized concave-convex structures formed by combining micron-sized special-shaped particles (silicate) with the silica nanoparticles. At the same time, the uneven structure forms an air layer that suppresses the adhesion of dust and sand that contain a lot of humidity, reducing the amount of dirt that adheres to the substrate.

#### ■ Conceptual image of dual barrier coating

### **Upgraded filters**

The standard filter has been improved from Coarse 35% to Coarse 60% (measured by ISO16890:2016).

## For Installer

#### Improved workability

#### **Commissioning time**

Using a designed motor and new remote controller, a genius algorithm is introduced to reduce the time of airflow adjustment.

|                   | RVX series (PZ-61DR-E)              | RVX3 series (PZ-62DR-EA/EB)   |  |  |  |  |
|-------------------|-------------------------------------|---|--|--|--|--|
| Motor             | Fan speed was not adjusted quickly. | Fan speed is adjusted quickly by using a designed motor.  |  |  |  |  |
| Screen<br>setting | 21                                  | Airflow  Add. All Supply / Exhaust  \$2. \$2. \$2. \$3. \$3. \$4. \$3. \$4. \$3. \$4. \$4. \$4. \$4. \$4. \$4. \$4. \$4. \$4. \$4 |  |  |  |  |

For example, when checking airflow volume twice in SA side → Commissioning time is reduced by 75%\*1

<sup>\*1</sup> The average reduction rate when our workers actually install LGH-100RVX-E and LGH-100RVX3-E.

Setting work involves changing the air volume of supply/exhaust air, and the amount of the time that can be reduced varies depending on the operator and work conditions.

#### **Vertical Installation**

By enabling vertical installation, the choices of installation location have expanded.

RVX3 can be installed vertically using optional parts.

It can be installed practically anywhere, such as in the machine room, the edges of a room, and so on.

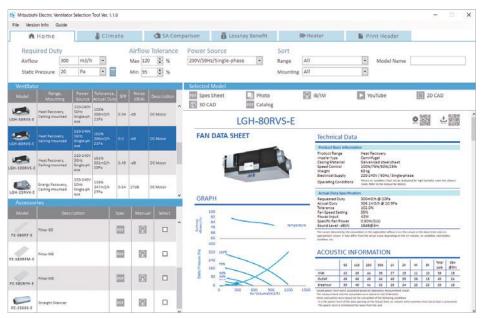

Please follow the installation manual when you install RVX3 series vertically.

| Model name | LOSSNAY       |
|------------|---------------|
|            | LGH-15RVX3-E  |
| PZ-1VS-E   | LGH-25RVX3-E  |

|            | LGH-50RVX3-E  |
|            | LGH-65RVX3-E  |
| PZ-2VS-E   | LGH-80RVX3-E  |
|            | LGH-100RVX3-E |

#### Mitsubishi Electric Ventilator Selection Tool

Appropriate information can be obtained from the required air volume and required static pressure.

This picture is an example of LGH-80RVS-E, which is a different model from RVX3 series.

# LGH-RVXT SERIES

The LGH-RVXT Series has a large airflow of 1500-2500 CMH but a thin body of approximately 500mm. Therefore, the unit can be easily installed in the ceiling.

LGH-150/200/250RVXT-E

#### Thin body type

#### ■ LGH-200RVX3-E

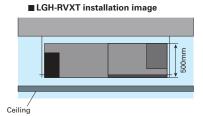

Height: 808mm

#### ■ LGH-150/200/250RVXT-E

Height: 500mm

# LGH-RVS SERIE

The LGH-RVS Series of sensible heat LOSSNAY models allows diverse solutions and options in response to customer needs.

LGH-50/80/100RVS-E

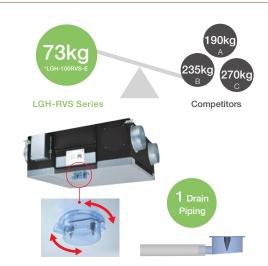

#### Easy installation

#### **Light Chassis**

Being light in weight is one of the most important factors for installation. The light chassis of the LGH-RVS series can provide a huge advantage in terms of installation coat and safety.

#### **Easy Drain Piping**

- Only one drain piping for both SA and EA.
- 360-degree drain pipe connection.
- Trap piping work is NOT required owing to an internal backflow stopper.

#### Various optional parts

The LGH-RVS series can connect with various optional parts. A CO2 sensor is one of the best solutions for optimized airflow control. The unit operates while optimizing airflow in accordance with the level of CO2 condensation in the room. Optimized ventilation can reduce the energy consumption of the air conditioner. A high-efficiency filter can be optionally installed in the unit as an easy solution for even better indoor air quality.

# GUF SERIES

Along with LOSSNAY ventilation, the OA processing unit is really two units in one, functioning as the main air conditioner when the load is light and adding supplemental air conditioning when the load is heavy.

GUF-50/100RD4, GUF-50/100RDH4

These units can be used with R410A.

Outdoor units available in the GUF-RD/RDH series (For details see Mitsubishi Electric's CITY MULTI catalog).

#### LOSSNAY ventilation and Air conditioning

The OA (outdoor-air) Processing Unit creates an optimum environment while providing substantial energy savings. The OA Processing Unit comprises forced air ventilation, heat recovery, heating and cooling, and air purification. This total air conditioning system keeps indoor air fresh and comfortable all year round, and keeps it free of contaminants preventing ailments such as sick building syndrome. Inside the OA Processing Unit is the Lossnay Core, a heat-exchange unit that transfers heat efficiently, cutting ventilation load by as much as 70%. A remarkable product found nowhere else, this special combination of functionality and performance contained within a single unit ensures users ample comfort, good health, and energy savings.

#### **Characteristic Curves**

## g 300 bressure 200 Static 150 (L/s)

#### **Dimensions**

■For LGH-RVX3 series

\*The input power, the efficiency and the noise are based on the rating air volume, 230V/50Hz and horizontal installation.

Unit: mm

<sup>■</sup> For LGH-RVXT series

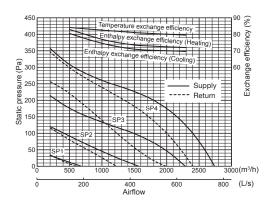

\*The running current, the input power, the efficiency and the noise are based on the rated airflow, 230V/50Hz.

\*Figures in the chart is measured according to Japan Industrial Standard (JIS B 8628). Characteristic Curves are measured by chamber method.

#### **Characteristic Curves**

#### **Dimensions**

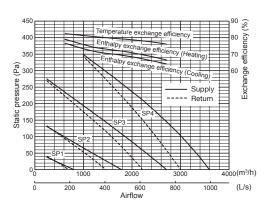

Unit: mm

<sup>\*</sup>The running current, the input power, the efficiency and the noise are based on the rated airflow, 230V/50Hz.

\*Figures in the chart is measured according to Japan Industrial Standard (JIS B 8628). Characteristic Curves are measured by chamber method.

#### **Characteristic Curves**

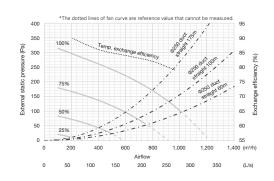

#### **Dimensions**

<sup>■</sup>The input power, the efficiency and the noise are based on the rating airflow, and 230V/50Hz. Temperature exchange efficiency (%) is measured at indoor DB 20°C/WB15°C and

outdoor DB 5°C/WB3°C. It is measured according to ISO16494.
When the indoor humidity is low and condensation in the heat exchanger does not occur, the exchange efficiency may be decreased in winter.

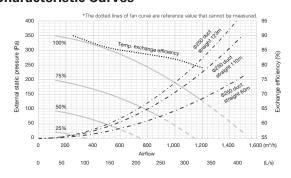

When the indoor humidity is low and condensation in the heat exchanger does not occur, the exchange efficiency may be decreased in winter.

The absolute humidity of RA shall be lower than 0.0139kg/kg (DA) in winter and relative the windity of RA shall be lower than 90 % RH through the year. Example of the absolute humidity 0.0139kg/kg (DA) are 20.7°C 90 % RH, 25°C 70%, 30°C 50% etc.

Unit: mm

Unit: mm

- \*Cooling/Heating capacity indicates the maximum value at operation under the following condition.

- \*Cooling/Heating capacity indicates the maximum value at operation under the following condition.

  Cooling: Indoor: 27°C DB/19°C WB Outdoor: 35°C DB/24°C WB

  Heating: Indoor: 20°C DB/13.8°C WB Outdoor: 7°C DB/6°C WB

  \*The figures in () indicates heat recoverying capacity of heat exchange core.

  \*Figures in the chart are measured according to Japan Industrial Standard (JIS B 8628). Characteristic Curves are measured by chamber method.

  \*When the total capacity of indoor units connected to 1 outdoor units (PUHY or PURY) exceeds the capacity of the total unit, the total capacity of GUF needs to be 30% and less of the connected outdoor until capacity.

### **Accessories** For LGH-RVX3/RVS Series

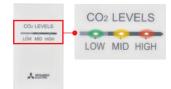

#### CO<sub>2</sub> Sensor

A CO2 sensor connected directly to a LOSSNAY RVX3/RVS unit optimizes the fan speed according to the level of  $\ensuremath{\mathsf{CO}}_2$  detected. It improves total heat exchange efficiency and contributes to energy saving.

#### PZ-70CSW-E

(Wall-mounted type)

CO<sub>2</sub> levels are indicated by LED lights.

#### PZ-70CSD-E

(Duct-mounted type)

#### ■ Automatic operation with CO<sub>2</sub> sensor

Fan speed automatically changes depending on CO<sub>2</sub> concentration.

### Accessories For LGH-RVX3/RVS Series & GUF Series

#### **Duct Silencer**

In facilities and applications requiring quiet operations, the silencer duct that reduces noise levels is the ideal solution. It contains glass wool and attenuates sound power by absorbing the noise from the airflow or operation of the unit.

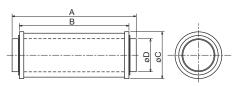

#### **Specifications**

| Model      | Airflow             |        |       | Attenuation of sou | und power level [c | IB] for center freq | uency (Discharge | )      |        |

- Figures on the chart above are based on the comparison with a general steel duct of the same length.
   The silencer is placed on just before the outlet during the measurement.
   When the airflow rate differs, the insertion loss is also different from the chart above.
   Figures on the chart above are flat (No-weighted) values.

# VL-CZPVU SERIES

Vertical type centralized ventilation with sensible heat exchange for residential use.

VL-250CZPVU-R/L-E VL-350CZPVU-R/L-E VL-500CZPVU-R/L-E

#### Key features

#### **Quiet Operation**

Noise is one of the most common concerns for residential ventilation. Ultra quiet operation is achieved with the sirocco fan designed by Mitsubishi Electric. The balance between airflow and static pressure is optimized and the fan rotation is minimized, leading to low noise levels.

#### **Air Purification**

An optional filter removes NOx and PM2.5 and improves indoor air quality. They can be incorporated inside the unit without any filter box, which saves space.

- \*NOx: Nitrogen oxide, which includes nitric oxide (NO) and nitrogen dioxide (NO2).
- \*PM2.5: Airborne particulates that are 2.5µm or smaller in size

#### **Wi-Fi Control**

MELCloud is a Cloud-based solution for controlling LOSSNAY units either locally or remotely by computer, tablet or smartphone via the Internet. It allows LOSSNAY operations to be checked and controlled via MELCloud from virtually anywhere and Internet connection is available. With MELCloud, the LOSSNAY system can be used much more easily and conveniently.

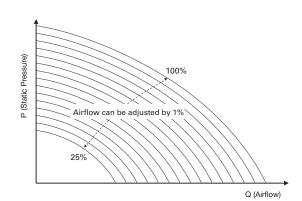

#### **Energy efficiency**

Under regulation (EU) No. 1254/2014, the VL-CZPVU series has the highest energy-saving performance in its class (ErP A<sup>+</sup>). It saves heating and cooling costs by minimizing the energy loss that occurs during ventilation.

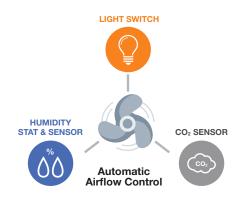

#### Variable airflow control

The default fan speed value (Fan speed 1: 30%, Fan speed 2: 50%, Fan speed 3: 70%, and Fan speed 4: 100%) of both supply air and exhaust air can be adjusted flexibly. Within the range between 25% and 100%, airflow can be adjusted by 1% increments to satisfactorily meet the designed airflow rate.

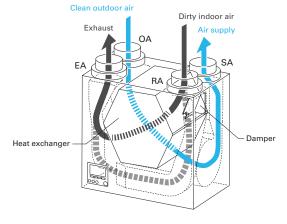

#### External airflow control

The airflow from the LOSSNAY unit can be altered using 0-10V signals from the controllers, such as the humidity stat and CO<sub>2</sub> sensor (field supply). The LOSSNAY unit is also connected to the light switch and can change to boost operation mode (input 220-240V). These devices are connected directly to the LOSSNAY unit, allowing automatic fan speed control according to bathroom occupation, CO<sub>2</sub> level, and humidity level.

#### Automatic bypass mode

It is possible to switch between "LOSSNAY ventilation (with heat exchange)" and "Bypass ventilation (without heat exchange)" either manually or automatically. When outside air is cooler than indoor air in summer, the unit directly draws in outside air, bypassing the heat exchanger.

\* The figure shows VL-350CZPVU-L-E

#### Wide operating temperature range

The VL-CZPVU series can operate at temperatures down to -15°C. With a pre-heater, it can operate at temperatures down to -25°C.

- \* In areas where outdoor air falls below -20°C, an electric shutter (locally supplied) is required in the OA duct in addition to the pre-heater
- \* The OA temperature must be higher than -15°C to use the pre-heater.

#### MELCloud for LOSSNAY

MELCloud enables fast, easy remote control and monitoring of LOSSNAY units. Wireless computer connectivity and an Internet-connected mobile or fixed terminal are all that are needed. MELCloud can also be used to control room air conditioners and Ecodan heat pumps simultaneously.

#### **Key Control and Monitoring Features**

- 1. Turn system on/off
- 2. Switching airflow & operating mode (Heat recovery / Bypass)
- 3. Confirming the status of the filter/core (Maintenance notification)

## **VL-CZPVU** SERIES

#### **Specifications**

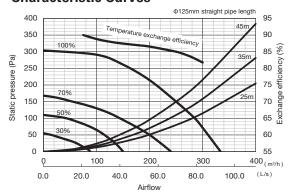

#### VL-250CZPVU-R/L-E

| Electrical Power Supply      |           |            | 220-240V/50H  | z, 220V-/60Hz |           |

Remote Controller Cover

Cable with Noise Filter (Cable length outside the product: Approximately 820 mm)

## **VL-50(E)S2-E, VL-50SR2-E** VL-100(E)U5-E

Wall mounted models. Particularly suitable for houses and small offices.

VL-50(E)S2-E VL-50SR<sub>2</sub>-E

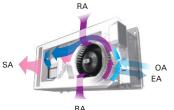

VL-100(E)U5-E

#### Decentralized ventilation: VL-50(E)S2-E, VL-50SR2-E and VL-100(E)U5-E

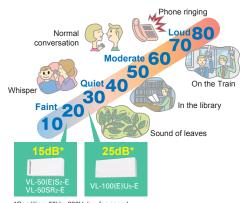

#### **Product advantages**

#### Air supplied and Exhausted Simultaneously

Air is supplied and exhausted simultaneously while transferring the heat.

Low noise levels are ideal for bedrooms and children's rooms.

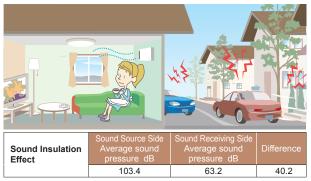

#### **Energy Efficient**

- Total heat exchange minimizes heat loss.
- Achieve over 80% \* temperature efficiency.
- \*VL-100(E)U5-E at low fan speed in 230V 50Hz
- \*VL-50(E)S2-E at low fan speed in 230V 50Hz

#### **Sound Insulation**

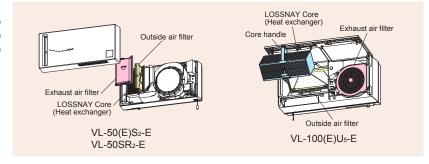

A sound insulation effect reduces the level of noise generated outside.

- \*Tested based on VL-08S2-AE
- \*Measured by average sound pressure level of more than 30dB in 500Hz according to
- VL-08S2-AE is a Japanese dedicated model equivalent to VL-50(E)S2-E

#### **Easy Maintenance**

The only maintenance required is cleaning the outside-air filter and exhaust-air filter. Filters are easily accessible, making quick and thorough cleaning possible.

#### Flexible Installation for Only VL-50(E)S2-E and VL-50SR2-E

Both horizontal and vertical installations are possible to fit various types of rooms.

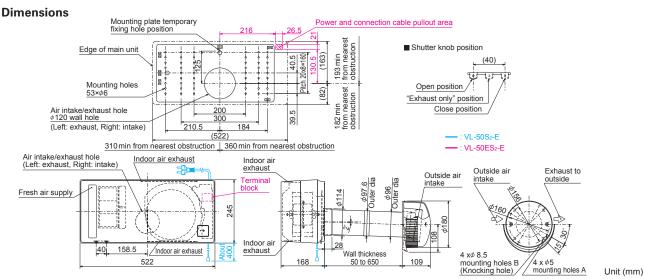

## VL-50(E)S2-E, VL-50SR2-E, VL-100(E)U5-E

## PLASMA QUAD PROTECT

### **Features and Concepts**

#### Reliable purification performance

JC-23KR-EU is equipped with a glass fiber HEPA filter rated as an EN1822 H13 grade filter. This product has a CADR (Clean Air Delivery Rate) value of 254m³/h (Pollen), 222m³/h (Dust) and 238m³/h (Smoke).

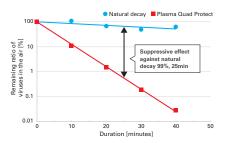

#### ■ Tests report results

#### Suppresses viruses

Test result of operating the unit with an air volume of 230m³/h in a 25m³ closed space:

99% suppression in 25 minutes

This result does not represent the product's performance in a practical operating environment.

[Testing laboratory] Kitasato Research Center for Environmental Science

[Testing method] Spraying virus in  $25 m^3$  of closed space, collecting the air in the space after a certain period of time, and measuring the amount of virus in the air.

[Condition] Operating JC-23KR-EU with an air volume of 230m $^3$ /h, 1 type of virus

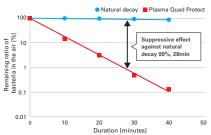

[Result] 99% suppression after 25min Test Report No.2022\_0421

#### Suppresses bacteria

99% suppression in 28 minutes

This result does not represent the product's performance in a practical operating environment.

[Testing laboratory] Kitasato Research Center for Environmental Science

[Testing method] Spraying bacteria in  $25m^3$  of closed space, collecting the air in the space after a certain period of time, and measuring the amount of bacteria in the air.

[Condition] Operating JC-23KR-EU with an air volume of  $230 \, \text{m}^3 / \text{h}$ , 1 type of bacteria

[Result] 99% suppression after 28min

Test Report No.2022\_0420

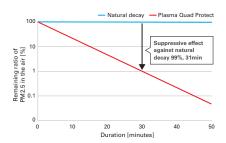

#### Removes 99% PM2.5

Test result of operating the unit with an air volume of 230m<sup>3</sup>/h in a 27.5m<sup>3</sup> closed space: 99%

suppression in 31 minutes

PM2.5 is a general term for fine particulate matter of 2.5 $\mu$ m or less

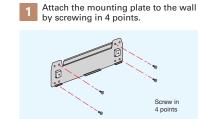

[Testing method] According to JEM1467.

Operating JC-23KR-EU (230m³/h, 31min.) in a closed space of 27.5m³. Additional particle from outside is not considered. This result does not represent the product's performance in an actual operating environment.

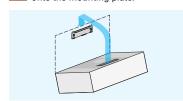

#### Easy, space-saving installation

Quick and easy installation, space-saving and design that compliments any interior.

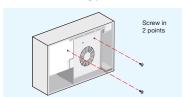

2 Hook the unit onto the mounting plate.

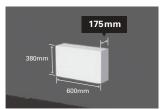

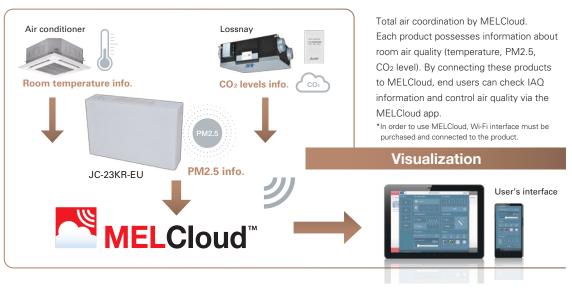

With a depth of just 175mm, the unit can be installed on the wall and save floor space in the room.

Its simple appearance matches any wall color or furniture.

#### New MELCO package solution

#### **M** NOTICE

Our air-conditioning equipments and heat pumps contain a fluorinated greenhouse gas, R410A (GWP: 2088) or R32 (GWP: 675). \*These GWP values are based on Regulation (EU) No.517/2014 from IPCC 4th edition. In case of Regulation (EU) No.626/2011 from IPCC 3rd edition, these are as follows. R410A (GWP: 1975), R32 (GWP: 550)

#### CAUTION

Do not install indoor units in areas (e.g. mobile phone base stations) where the emission of VOCs such as phthalate compounds and formaldehyde is known to be high as this may result in a chemical reaction.

#### **MARNING**

When installing or relocating or servicing our air-conditioning equipment, use only the specified refrigerant (R410A or R32) to charge the refrigerant lines.

Do not mix it with any other refrigerant and do not allow air to remain in the lines.

If air is mixed with the refrigerant, then it can be the cause of abnormal high pressure in the refrigerant lines, and may result in an explosion and other hazards.

The use of any refrigerant other than that specified for the system will cause mechanical failure, system malfunction or unit breakdown. In the worst case, this could lead to a serious impediment to securing product safety.
